Artifacts in Behavioral Research Robert Rosenthal, Ralph L. Rosnow, 2009-08-03 This new combination volume of three-books-in-one, dealing with the topic of artifacts in behavioral research, was designed as both introduction and reminder. It was designed as an introduction to the topic for graduate students, advanced undergraduates, and younger researchers. It was designed as a reminder to more experienced researchers, in and out of academia, that the problems of artifacts in behavioral research, that they may have learned about as beginning researchers, have not gone away. For example, problems of experimenter effects have not been solved. Experimenters still differ in the ways in which they see, interpret, and manipulate their data. Experimenters still obtain different responses from research participants (human or inhuman) as a function of experimenters' states and traits of biosocial, psychosocial, and situational origins. Experimenters' expectations still serve too often as self-fulfilling prophecies, a problem that biomedical researchers have acknowledged and guarded against better than have behavioral researchers; e.g., many biomedical studies would be considered of unpublishable quality had their experimenters not been blind to experimental condition. Problems of participant or subject effects have also not been solved. We usually still draw our research samples from a population of volunteers that differ along many dimensions from those not finding their way into our research. Research participants are still often suspicious of experimenters' intent, try to figure out what experimenters are after, and are concerned about what the experimenter thinks of them.

Multiple Perspectives on the Effects of Evaluation on Performance Stephen G. Harkins, 2001-10-31 In the field of psychology, research areas often develop in relative isolation. Researchers in different areas are either not aware of, or seem to fail to see the relevance of findings from other areas even though it would seem that the findings are directly relevant to their own. One striking example of this is to be found in research that focuses on the effects of evaluation on performance. This volume integrates thinking from five different research traditions - Achievement Goals, Intrinsic vs. Extrinsic Motivation, Goal Setting, Social Loafing, and Social Facilitation - through the unique format of a give-and-take conversation between leading academics from each.

**Psychological Foundations of The Entrepreneurial Mindset** Kelly G. Shaver, 2024-02-12 Highlighting three decades of key research and emphasizing the psychological processes that characterize us all, *Psychological Foundations of The Entrepreneurial Mindset* moves away from the traditional focus on the entrepreneurial ecosystem to provide a novel investigation at the level of the individuals themselves.

*The State of Social Psychology* Mark R. Leary, 1989-06 ` shows that we are in the midst of a period of thoughtful reflection about the field of social psychology... Particularly impressive are the nuanced terms in which authors discuss the processes by which the discipline develops and its practitioners identify problems as central or peripheral. Also, (the) highlighting of Thibaut's view that social psychology will become the fundamental social science is an optimistic feature of these articles' - Alice Eagly This volume was first published as Volume 3 Number 2 (1988) of the *Journal of Social Behavior and Personality*.

**Social Psychology and Physical Activity** Rainer Martens, 1975

**Social Psychology** H. Andrew Michener, John D. DeLamater, 1999 This complete overview of human social behavior integrates a sociological perspective with an emphasis on empirical research. The authors use sociological concepts and theory to stress the influences of culture, social structure, and groups on the individual.

Consciousness and Self-Regulation Gary Schwartz, 2012-12-06 The first and foremost concrete fact which every one will affirm to belong to his inner experience is the fact that consciousness of some sort goes on. I -William James, 1893 We are witnessing today a mounting interest among behavioral and biological scientists in problems long recognized as central to our understanding of human nature, yet until recently considered out of the bounds of scientific psychology and physiology. Sometimes thrown into the heading of altered states of consciousness, this growing research bears directly upon such time-honored questions as the nature of conscious experience, the mind-body relationship, and volition. If one broadly views this research as encompassing the two interrelated areas of consciousness and self-regulation, one can find many relevant contemporary examples of creative and experimentally sophisticated approaches, including research on the regulation of perception and sensory experience, attention, imagery and thinking, emotion and pain; hypnosis and meditation; biofeedback and voluntary control; hemispheric asymmetry and specialization of brain function; drug-induced subjective states; and biological rhythms. Because the material is spread over many different kinds of publications and disciplines, it is difficult for anyone person to keep fully abreast of the significant advances. The overall aim of the new Plenum Series in Consciousness and Self-Regulation: Advances in Research is to provide a scholarly forum for discussing integration of these diverse areas by presenting some of the best current research and theory.
