Professor Marcela López-Vallejo

Reconfiguring Global Climate Governance in North America Professor Marcela López-Vallejo, 2014-05-28 Global climate governance has presented problems that have led to failures, yet it has also opened the door to new transregional governance schemes, especially in North America. This book introduces an environmental dimension into the concept of governance. Almost fifteen years after the climate global governance concept emerged, results worldwide have not been as favorable as expected. This book details previous discussions about the concept of global climate governance and its limits. It highlights how the Kyoto Protocol has a limited design taking into account a national approach to global, regional, and transnational problems, had no obligatory mechanisms for implementation and explains the emergence of new polluters not committed under it such as China and India. Furthermore this book explores other levels of authority such as regional institutions - the North American agreement on trade (NAFTA) and on environment (NAAEC), as well as the regional energy working group (NAEWG). The author puts forward a theoretical proposal for re-territorialization and coordination of policies for climate change into new forms of articulating interests in what she terms transnational green economic regions (TGERs) and tests this on two case studies - the Regional Greenhouse Gas Initiative (RGGI) and the Western Climate Initiative (WCI). This study presents the challenges and opportunities of a transregional approach in North America.

Climate Action in Southern Africa Philani Moyo, 2023-10-27 Using climate justice as an analytical tool, this volume examines the role of local mitigation and adaptation actions in Southern Africa in furthering climate-resilient development. Climate Action in Southern Africa examines the intrinsic connection between local climate actions, climate-resilient development and strides towards a just transition. The theoretical grounding in climate justice allows the authors to analyse whether current climate actions in Africa are truly effective for the poor and marginalised whose lives and livelihoods are impacted by a climate crisis largely not of their making. The authors also question the extent to which pathways to net-zero carbon emissions by 2050 are achievable in Africa and ask whether this can be attained without undermining livelihoods and human development. Overall, this book argues that for any transition to be a just transition, it has to be aligned with the pursuit of sustainable development and climate justice for current and future generations on the African continent. Drawing out key factors including politics, gender and migration, this volume will be of great interest to students and scholars of climate change, climate justice and African development.

The Human Right to a Healthy Environment John H. Knox, Ramin Pejan, 2018-06-28 This book considers and clarifies many different facets of the international human right to a healthy environment.

Global China Tarun Chhabra, Rush Doshi, Ryan Hass, 2021-06-22 The global implications of China's rise as a global actor In 2005, a senior official in the George W. Bush administration expressed the hope that China would emerge as a responsible stakeholder on the world stage. A dozen years later, the Trump administration dramatically shifted course, instead calling China a strategic competitor whose actions routinely threaten U.S. interests. Both assessments reflected an underlying truth: China is no longer just a rising power. It has emerged as a truly global actor, both economically and militarily. Every day its actions affect nearly every region and every major issue, from climate change to trade, from conflict in troubled lands to competition over rules that will govern the uses of emerging technologies. To better address the implications of China's new status, both for American policy and for the broader international order, Brookings scholars conducted research over the past two years, culminating in a project: *Global China: Assessing China's Growing Role in the World*. The project is intended to furnish policy makers and the public with hard facts and deep insights for understanding China's regional and global ambitions. The initiative draws not only on Brookings's deep bench of China and East Asia experts, but also on the tremendous breadth of the institution's security, strategy, regional studies, technological, and economic development experts. Areas of focus include the evolution of China's domestic institutions; great power relations; the emergence of critical technologies; Asian security; China's influence in key regions beyond Asia; and China's impact on global governance and norms. *Global China: Assessing China's Growing Role in the World* provides the most current, broad-scope, and fact-based assessment of the implications of China's rise for the United States and the rest of the world.

New Approaches to CSR, Sustainability and Accountability, Volume I Kıymet Tunca Çaliyurt, 2019-09-23 This book provides a platform for discussing the challenges that organizations face in order to implement sustainability, ethics, and effective corporate governance, all of which are important elements of “standing out” from other companies. Examining the background of the New European Consensus on development with the new guiding motto ‘Our World, Our Dignity, Our Future’, the authors explore how this new legislation on sustainability issues around the world is forcing companies to deal directly with sustainability issues. The 2030 Agenda for Sustainable Development (2030 Agenda), adopted by the United Nations in September 2015, is the international community’s response to global challenges and trends in connection with sustainable development. With the Sustainable Development Goals (SDGs) at its core, the 2030 Agenda is a transformative political framework designed to eradicate poverty and achieve sustainable development globally. It balances the economic, social and environmental dimensions of sustainable development, including the key issues of governance and peaceful and inclusive societies, and recognizes the essential interlinkages between its goals and targets, i.e., that they must be implemented as a whole and not selectively. The respective chapters in this volume raise a number of questions regarding

companies' ability to implement sustainability, ethics, and effective corporate governance. Simultaneously, they explore how organizations must adapt to sustainability-related developments.

ESG and Real Estate Thomas Veith,Christiane Conrads,Florian Hackelberg,2022-05-19 This is the first comprehensive practical handbook on the topic of Environmental Social Governance (ESG) and its impact on the real estate industry. The sustainability megatrend is still in its early stages in the real estate sector, and there is a lack of standards, practical examples and data. The development is very dynamic and sometimes confusing, and new, complex, requirements and regulations are constantly being added. The authors – an expert team of economists, lawyers, investors, asset managers and engineers – provide an overview of national and European regulatory requirements as well as current market developments. They show what role ESG plays not only in the areas of new construction, renovation and real estate management, but also in investment processes and real estate valuations. Contents: ESG and the real estate market ESG and regulatory environment ESG and real estate management ESG in urban and project development

Human Development Report 2007/2008 United Nations Development Programme,2007-11-15 Human development is about putting people at the center of development. It is about people realizing their potential, increasing choice and enjoying the freedom to lead the lives they value. Created in 1990, the Human Development Report has explored themes including gender equity, democracy, human rights, globalization, cultural liberty and water scarcity. The past years have witnessed the emergence of a growing consensus on climate change. Governments across the world have seen the warning signs. The science linking global warming to human activity is unequivocal. The economic case for action is compelling: the costs of inaction will heavily outweigh the costs of action. Yet the politics lags behind the science and the economics. Collectively, the world's governments are failing to act with the urgency demanded by the scale of the threat. The window of opportunity for avoiding dangerous climate change is closing fast. This year's Human Development Report explains why we have less than a decade to change course and start living within our global carbon budget. It explains how climate change will create long-run low human development traps, pushing vulnerable people into a downward spiral of deprivation. Because climate change is a global problem with global causes and effects, it demands a global response with countries acting on the basis of their historic responsibility and capabilities.

The George Washington International Law Review ,2006

Issues Associated with the Implementation of Article 82 of the United Nations Convention of the Law of the Sea International Seabed Authority,2009 Potential claims to Outer Continental Shelf (OCS) areas under the 1982 United

Nations Convention on the Law of the Sea, may eventually cover more than 15 million Square Kilometres of seabed. Under Article 82 of the Convention, a portion of the revenue from the extraction of non-living resources on the OCS must be disbursed through the International Seabed Authority 'on the basis of equitable sharing criteria, taking into account the interests and needs of developing States, particularly the least developed and the land-locked among them'. Responsibility for the implementation of Article 82 rests with the Authority and with States that exploit the non-living resources of the OCS. However, Article 82 does not address many of the specifics of how this is to be accomplished and therefore careful consideration is required of the obligation, principles and criteria for distribution of benefits, procedural aspects, the role of the Authority, the role of OCS States, and economic and temporal issues. To begin to answer these, and other, questions around the interpretation and application of Article 82, the Authority, in conjunction with the Energy, Environment and Development Programme of the Royal Institute of International Affairs (Chatham House) in the United Kingdom, convened a seminar for a group of invited experts to discuss the issues associated with Article 82. The present report, which examines the legal and policy issues associated with the implementation of Article 82, was originally prepared as a background paper for the seminar, and was subsequently extensively revised to take into account the views expressed by participants in the seminar.

Managing Water Under Uncertainty and Risk Unesco,2012 This flagship report is a comprehensive review that gives an overall picture of the world's freshwater resources. It analyses pressures from decisions that drive demand for water and affect its availability. It offers tools and response options to help leaders in government, the private sector and civil society address current and future challenges. It suggests ways in which institutions can be reformed and their behaviour modified, and explores possible sources of financing for the urgently needed investment in water. The WWDR4 is a milestone within the WWDR series, reporting directly on regions and highlighting hotspots, and it has been mainstreamed for gender equality. It introduces a thematic approach - 'Managing Water under Uncertainty and Risk' - in the context of a world which is changing faster than ever in often unforeseeable ways, with increasing uncertainties and risks. It highlights that historical experience will no longer be sufficient to approximate the relationship between the quantities of available water and shifting future demands. Like the earlier editions, the WWDR4 also contains country-level case studies describing the progress made in meeting water-related objectives. The WWDR4 also seeks to show that water has a central role in all aspects of economic

development and social welfare, and that concerted action via a collective approach of the water-using sectors is needed to ensure water's many benefits are maximized and shared equitably and that water-related development goals are achieved.
