Fuzzy Systems and Data Mining VI Antonio J. Tallón-Ballesteros, 2020-12-15 The interdisciplinary field of fuzzy logic encompass applications in the electrical, industrial, chemical and engineering realms as well as in areas of management and environmental issues, while data mining covers new approaches to big data, massive data, and scalable, parallel and distributed algorithms. This book presents papers from the 6th International Conference on Fuzzy Systems and Data Mining (FSDM 2020). The conference was originally due to be held from 13-16 November 2020 in Xiamen, China, but was changed to an online conference held on the same dates due to ongoing restrictions connected with the COVID-19 pandemic. The annual FSDM conference provides a platform for knowledge exchange between international experts, researchers academics and delegates from industry. This year, the committee received 316 submissions, of which 76 papers were selected for inclusion in the conference; an acceptance rate of 24%. The conference covers four main areas: fuzzy theory; algorithms and systems, which includes topics like stability; foundations and control; and fuzzy applications, which are widely used and cover

various types of processing as well as hardware and architecture for big data and time series. Providing a current overview of research and developments in fuzzy logic and data mining, the book will be of interest to all those working in the field of data science.

Business Informatics Silke Retzer,2003-05-19 Inhaltsangabe:Abstract: This study gives an overview about the Business Informatics discipline in Australia with a strong focus on Business Informatics aspects at Australian universities. Therefore the different terms Business Informatics and Information Systems (IS) are defined first in chapter 2. The approach taken to exploring Business Informatics at Australian universities was to conduct intensive interviews with eleven Australian university IS academics within the following states and territories of the country: Queensland, New South Wales, The Australian National Capital and Victoria. Questions were asked relating to the specific university, the educational Business Informatics courses on offer, the organisational structure and cultural aspects within the Business Informatics discipline. The results of the interviews are then supported by a strong web and literature review and are shown summarized in chapter 3. Additional information was obtained by the 13th Australasian Conference on Information Systems (ACIS) from 4th to 6th of December 2002 at the Victoria University Building in Melbourne. The conference gave an insight into topics as Online Learning, the IS discipline at universities and Approaches for Problem-Based Learning in Information Systems. These conference papers are summarized presented in chapter 4. This detailed overview of IS in Australian universities can then be compared to the Business Informatics discipline in German universities. Several aspects are considered for this in chapter 5 like the educational offers within this discipline area, the organisational structure of Business Informatics/IS within universities and cultural aspects in dependence to the structure of the interview guideline. Differences and similarities within the Business Informatics/IS discipline in higher education between Germany and Australia are explored, which is the aim of this study. Additional recommendations from the author should be seen as a thought-provoking-impulse and support further development in higher education. Review of NASA's Aerospace Technology Enterprise National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Committee for the Review of NASA's Pioneering Revolutionary Technology (PRT) Program,2003-12-21 The Committee for the Review of NASA's Pioneering Revolutionary Technology (PRT) Program and its three supporting panels were charged by the National Aeronautics and Space Administration (NASA) with assessing the overall scientific and technical quality of the PRT program and its component programs, along with their

associated elements and individual research tasks. Major issues addressed in the review include (1) research portfolios, (2) research plans, (3) technical community connections, (4) methodologies, and (5) overall capabilities. As reflected in the organization of the report, a two-pronged assessment was developed. Each panel provided a detailed assessment of the program under its purview, which was refined and updated over the course of the review. The committee, composed mainly of representatives from each panel, integrated and evaluated the panel results and provided top-level advice on issues cutting across the entire PRT program.

Applied Computing and Information Technology Roger Lee,2019-08-21 This book gathers the outcomes of the 7th International Conference on Applied Computing and Information Technology (ACIT 2019), which was held on May 29–31, 2019 in Honolulu, Hawaii. The aim of the conference was to bring together researchers and scientists, businesspeople and entrepreneurs, teachers, engineers, computer users, and students to discuss the various fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Further, they presented research results on all aspects (theory, applications and tools) of computer and information science, and discussed the practical challenges encountered in their work and the solutions they adopted to overcome them. The book highlights the best papers from those accepted for presentation at the conference. They were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round, 15 of the conference’s most promising papers were selected for this Springer (SCI) book and not the conference proceedings. We eagerly await the important contributions that we know these authors will make to the field of computer and information science.

Information Technology Research, Innovation, and E-Government National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Computing and Communications Research to Enable Better Use of Information Technology in Government,2002-05-03 Governments have done much to leverage information technology to deploy e-government services, but much work remains before the vision of e-government can be fully realized. Information Technology Research, Innovation, and E-government examines the emerging visions for e-government, the technologies required to implement them, and approaches that can be taken to accelerate innovation and the transition of innovative information technologies from the laboratory to operational government systems. In many cases, government can follow the private sector in designing and implementing IT-based services. But there are a

number of areas where government requirements differ from those in the commercial world, and in these areas government will need to act on its role as a demand leader. Although researchers and government agencies may appear to be unlikely allies in this endeavor, both groups have a shared interest in innovation and meeting future needs. E-government innovation will require addressing a broad array of issues, including organization and policy as well as engineering practice and technology research and development, and each of these issues is considered in the book.
