Asma Al-Saidi,Rudolf Fleischer,Zakaria Maamar,Omer F. Rana

In Honour of the Visit of His Majesty Sultan Qaboos Bin Said German University of Technology in Oman GUtech - the First Ten Years (2007-2017) Michael Jansen,Michael Modigell,Burkhard Rauhut,2020 On 24 December 2012, towards 6pm, Sultan Qaboos bin Said stepped out of his limousine against the backdrop of a Muscat sunset and paid a royal visit to the German University of Technology in Oman (GUtech). The recently completed building had received several awards and, after two changes of location, the GUtech had at last found its new home. The idea of founding a university in Oman was initiated in 2003 by former Vice-Chancellor Prof. Michael Jansen and Chancellor Professor Burkhard Rauhut of the RWTH University in Aachen, and Shaikh Abdullah al Salmi, Minister for Religious Affairs, during the Sheikhs visit to Aachen. The Al-Salmi family and experts in the history of urban planning from the RWTH swiftly set to work on a plan that led to an application in 2005 to the Omani Ministry of Science for a licence. This was granted in principle by June 2006, and on 26 December 2006 the treaty of collaboration was formally signed by Prof. Burkhard Rauhut as Chancellor of the RWTH Aachen and Abdullah Salim al Salmi as head of the newly-founded organisation Oman Education Services LLC (OES). In the autumn of 2007 the first preliminary courses began to be taught. In 2017 the German University of Technology celebrated not only the fifth anniversary of the royal visit but also the tenth anniversary of the start of teaching. This book describes chronologically the exciting developments in the first ten years of a private initiative by the al Salmi family, which has confidently joined with the RWTH as sole funder and as an academic partner. Today GUtech is considered to be one of the best scientific universities in Oman.

Regional Universities and International Joint Universities Jane Knight,2025-07-24 This book offers an in-depth analysis of two collaborative models of international higher education institutions: international joint universities (IJUs) and supranational regional universities (RUs). They are based on close partnerships among countries and institutions and thus differ from the single state university model as well as international branch campuses or franchise universities. Key features of these institutions are examined through the use of conceptual frameworks and ten in-depth case studies from all regions of the world. Distinguishing characteristics such as shared governance and management practices; collaborative academic programs and the development of joint laboratories, research networks, and centers of excellence are analyzed. A study of the driving rationales for IJUs and RUs reveals commonalities and stark differences. While international joint universities are

commonly single campus institutions, regional universities can be single, multiple campus or virtual. IJUs and RUs are understudied phenomena as more attention and research is focused on the rise of international branch campuses. Academic leaders, policy makers, higher education scholars and students will benefit from the analysis of the key features, rationales and benefits of international collaborative university models and how they can contribute to 1) providing increased and diversified access to education, 2) promote regional identity and facilitate bilateral and regional collaboration for education, research and innovation; 3) contribute to stronger regional and international relations between countries through knowledge diplomacy; and 4) address contemporary global and regional issues. At the same time, it is important to acknowledge potential risks and uncertainties related to quality assurance, qualification recognition, financial stability, research integrity, knowledge security, and sustainability that can be linked to collaborative models of international higher education institutions.

Transnational German Education and Comparative Education Systems Benjamin Nickl, Stefan Popenici, Deane Blackler, 2019-12-18 This book presents an in-depth look at the state of transnational education and comparative perspectives on education systems between Germany and other nation states. It explores how a transnational education identity in secondary and tertiary institutions has developed in the German and other national contexts and which lessons can be learned from current challenges and successes of education systems. It uses detailed case studies to promote critical rethinking of current educational practices in high schools and universities, specifically of race, gender, religion and learner ability in educational settings. It understands learning and teaching as an arena to discuss transnational education opportunities in the 21st century as an emerging or evolving discourse on contemporary forms of transnationalism.

Intelligent Cloud Computing Asma Al-Saidi, Rudolf Fleischer, Zakaria Maamar, Omer F. Rana, 2015-06-04 This book constitutes the refereed post-conference proceedings of the First International Conference on Intelligent Cloud Computing, held in Muscat, Oman, in February 2014. The 10 revised full papers presented were carefully reviewed and selected from 18 submissions. The papers cover topics in the areas of resource management and energy efficiency and security. They include 5 invited talks from leading organizations working in cloud computing in Oman and in the region.

Surface Environments and Human Interactions Rajat Mazumder, Rajib Shaw, 2024-03-12 This book describes the complex interplay between Earth's surface processes (erosion and sedimentation) and human interactions. Intensive as well as extensive research has been undertaken to infer modern sedimentation processes and to infer the mode of stratigraphic sequence building. However, the effort to understand the influence of sedimentation processes on society and the human impact on sedimentation is long overdue. This is a new upcoming multidisciplinary research field that is beyond the scope of leading traditional Earth and Environmental Science journals. To fill in the prodigious gap in the knowledge base, this book includes in-depth reviews and new data-based case studies from Asia, involving multidisciplinary research. It covers case

studies of risk management of various hazards and risk management systems at regional, national, and local levels. The book proposes a comprehensive approach to reducing future risks by collaborating with various stakeholders and preparing for the most effective responses towards complicated hazards, minimizing social damage. This publication will help researchers in the field of Environment and Earth surface processes, disaster risk reduction, and geoscientists to have a better idea of the current trend of research in the field and will provide updated synthesis on this important topic.
