

Retinal Pigment Epithelial Detachment

Lawrence A. Yannuzzi, Kurt A. Gitter, Howard Schatz

Retinal Pigment Epithelial Detachment Maria Andreea Gamulescu, Horst Helbig, Joachim Wachtlin, 2017-08-23 This excellently illustrated book offers detailed guidance on the differential diagnosis and therapy of detachment of the retinal pigment epithelium (PED), a frequently seen feature in various diseases of the eye. Introductory chapters discuss the anatomy, pathophysiology, and imaging of PEDs, highlighting how especially the increasing use of spectral domain OCT enables even small PEDs to be detected and followed over time. The diverse forms of PED are then described, with explanation of how they may hint at the underlying pathology or even be pathognomonic when considered in conjunction with other clinical features. New insights are provided into the characteristics of the various forms of PED, and predictors of complications – such as rip of the PED – are discussed. It is clearly explained how knowledge of the different types of PED and their underlying diseases can assist in creating an appropriate individualized follow-up and therapy scheme for each patient.

Age-related macular degeneration Frank G. Holz, 2004 Though branded as pornography for its graphic language and explicit sexuality, Henry Miller's *Tropic of Cancer* is far more than a work that tested American censorship laws. In this riveting book, published to coincide with the fiftieth anniversary of *Tropic of Cancer*'s initial U.S. release, Frederick Turner investigates Miller's unconventional novel, its tumultuous publishing history, and its unique place in American letters. Written in the slums of a foreign city by a man who was an utter literary failure in his homeland, *Tropic of Cancer* was published in 1934 by a pornographer in Paris, but soon banned in the United States. Not until 1961, when Grove Press triumphed over the censors, did Miller's book appear in American bookstores. Turner argues that *Tropic of Cancer* is "lawless, violent, colorful, misogynistic, anarchical, bigoted, and shaped by the same forces that shaped the nation." Further, the novel draws on more than two centuries of New World history, folklore, and popular culture in ways never attempted before. How Henry Miller, outcast and renegade, came to understand what literary dynamite he had within him, how he learned to sound his "war whoop" over the roofs of the world, is the subject of Turner's revelatory study.

Retinal Pigment Epithelium and Macular Diseases Gabriel Coscas, Felice Cardillo Piccolino, 2012-12-06 This volume of Documenta Ophthalmologica Proceedings Series collects the scientific papers presented at the 2nd International Symposium on Retinal Pigment Epithelium and the 4th Meeting of the European Macula Group held in Genoa, May 29-June 1, 1996. The

Symposium on Retinal Pigment Epithelium was promoted by the University Eye Clinic of Genoa as the natural continuation of the first Symposium held with great success in Genoa in 1988. The previous Meetings of the European Macula Group were held in Coimbra (1988), Crete (1989) and Athens (1994). I was greatly pleased and honoured to host the fourth congress of this distinguished Society and I am grateful to Gabriel Coscas, Jose Cunha-Vaz and George Theodossiadis, founders of the Society, for selecting Genoa on this occasion. The two meetings integrated well in an unicuum and brought together an exceptional number of outstanding retinal specialists coming from all over the world. All the aspects of the current research concerning retinal pigment epithelial and macular diseases were covered. Several interesting presentations regarded new techniques of retinal and choroidal imaging. A full session was dedicated to the latest advances in culture and transplantation of retinal pigment epithelial cells. Age-related macular degeneration was a major subject for discussion, including new approaches to treatment. This topic was high lighted by a mini-symposium on drusen, including a series of superb lectures on classification, clinicopathological studies, indocyanine green imaging, and laser treatment for prevention of choroidal neovascularization.

Fundus Autofluorescence Noemi Lois,John V. Forrester,2015-07-29 Make optimal use of fundus autofluorescence in your practice! Fundus Autofluorescence, by esteemed authorities Noemi Lois and John V. Forrester, explains everything you need to know about fundus autofluorescence (AF), from the basics of this powerful ocular imaging modality to the latest diagnostic and prognostic applications. A “who’s who” of leading experts provide the up-to-date, clinically focused guidance you need to effectively evaluate a full range of posterior segment disorders. Master the latest AF techniques and applications with 35 brand-new chapters exploring vascular retinal diseases, posterior uveitis, intraocular tumors, and much more, plus comprehensive updates and enhancements throughout. Learn about the newest autofluorescence technologies, including wide-angle fundus autofluorescence, near-infrared autofluorescence and quantitative autofluorescence. Accurately diagnose posterior segment conditions. Get clear explanations of the science behind the synthesis and degradation of lipofuscin, the techniques available to image and quantify AF, the normal distribution of AF, and alterations occurring in a variety of posterior segment diseases. See plentiful examples of AF findings in each chapter, with clear explanations of the value of this imaging technique in the evaluation of patients and understanding of the pathogenesis of each condition depicted.

Ocular Circulation and Neovascularization D. Benezra,N. Ryan,B.M. Glaser,R.P. Murphy,2012-12-06 Neovascularization is a normal phase of tissue repair mechanism. In the eye, however, sprouting of new vessels within avascular tissues and their greater tendency to bleed have detrimental effects on vision. Diabetic retinopathy, corneal neovascularization, age-related macular degeneration, retinal vein occlusion, and retinopathy of prematurity are major causes of blindness. In all, uncontrolled proliferation of new vessels is the underlying

pathological cause leading to the inexorable loss of vision. Development of laser technologies and their wide use in ophthalmology have brought some hope for the treatment of these diseases. However, it became evident that direct closure of the new vessels and/or ablation of large parts of the tissue are not ideal solutions to the problem. Recent advances in molecular biology and genetic engineering have fostered basic knowledge regarding the growth factors and intercellular messengers and their association with the proliferation of new blood vessels. These latter findings sparked a renewed interest in Michaelson's X-factor of ocular neovascularization and opened avenues for possible innovative therapeutic approaches. Therefore, the suggestion to organize an international gathering of clinicians and scientists interested in problems of ocular circulation and neovascularization was received with great enthusiasm. Unanimously, it was decided to dedicate the symposium to Professor I.C. Michaelson, the innovative scientist, the great clinician, the indefatigable teacher, and above all, the wonderful human being. The meeting was highlighted by the outstanding atmosphere of friendship and scientific exchanges. This book mirrors the information delivered and includes a selection of papers from the scientific program. The organization of this meeting and the publication of the book would not have been possible without the harmonious team efforts made by the International, Scientific and Local Committees. I am thankful to the chairpersons of the various sessions for their time, keen interest and endeavor for the realization of a high scientific level. I also deeply acknowledge the help and support of Arnall Patz, Bob Murphy, Bert Glaser, Robert Frank, Larry Hjelmeland, Gordon Klintworth, Neville Welsh, Charles Riva, Alec Garner, Desmond Archer, Ephraim Friedman, Myron Yanoff, Moshe Lahav, Willem Manschot, Hans-Walther Larsen and Masanobu Uyama. The powerful stimulus of Hanan Zauberman, Steve Ryan, Gabriel Coscas, Giselle Soubrane, Moshe Ivry, Yuval Yassur and Sue and Peter Ballen was most instrumental in the realization of these dreams. As always, I was fortunate to have the invaluable collaboration of my loyal assistants: Evelyne Cohen, Genia Maftzir, Israel Barzel, Arie Zelikovitch, and Judith Ben Ezra. The smooth running of the meeting and timely editing of the book could not have been possible without the incalculable help and indefatigable typing and council of Judith Fisher, whose seconded me in selecting the papers and editing the book.

Gass' Atlas of Macular Diseases Anita Agarwal, 2011-12-23 The Fifth Edition of Gass' Atlas of Macular Diseases, by Dr. Anita Agarwal, provides expert diagnostic guidance on macular disorders and quickly brings you up to date on this evolving specialty. Using a case-based approach, it richly depicts a full range of retina and macular diseases, including new infectious, degenerative, and dystrophic conditions. Take advantage of the latest imaging technologies to identify common and rare disorders, and confirm difficult diagnoses with the aid of more than 5,500 high-quality images. Printed in full color for the first time, this edition is accessible online at www.expertconsult.com. ... appropriate for highly ambitious residents, retina fellows and specialists, and general ophthalmologists who are looking for an excellent reference book with a proud lineage and impeccable reputation. Reviewed by ESCRS EuroTimes (European Society of Cataract and Refractive Surgery), Apr 2015

Rely on the same unique, richly illustrated case-descriptive format-encompassing history, clinical examination, and follow-up-that popularized the original book by the late Dr. Donald Gass, the famed ophthalmologist whose clinical expertise set new standards in macular diagnosis. Get expert diagnostic guidance under the new authorship of Dr. Anita Agarwal, a protégé of Dr. Gass who has compiled the ultimate collection of images and hard-to-find case studies. Evaluate macular diseases using the latest techniques including fluorescein angiography, optical coherence tomography (OCT), indocyanine green (ICG), and fundus autofluorescence. Visualize the conditions you're likely to see in practice and confirm your diagnoses by comparing your clinical findings to more than 5,500 images and illustrations (over 3,500 in full color).
