Diagnostic Cytopathology Winifred Gray, Gabrijela Kocjan, 2010-01-01 The new edition of Diagnostic Cytopathology provides the practicing and trainee cytopathologist with a comprehensive guide to the diagnostic applications of exfoliative and aspiration cytology. The book covers normal and abnormal cytological findings encountered in all body sites where cytological applications are used. Appropriate histopathological, immunohistochemical and molecular correlations, together with a consideration of the possible differential diagnoses, accompany the cytological findings. The reader can see a full range of normal and abnormal findings with almost 2,000 full-colour images. The book is heavily referenced to ensure that it will serve as a practical resource for daily reference in the laboratory. A uniformity of basic chapter structure will help readers to quickly find the diagnostic answers they seek. This edition stresses not just the diagnostic cytological features of the various conditions encountered, but also the diagnostic pitfalls and the grey areas between so as to enable the reader to give more evidence-based reports. In recognition of their rapid expansion, there are new chapters on recent technological developments and on the cytodagnosis of childhood tumours. A special section on the importance of multidisciplinary team meetings that include the cytopathologist as a core member of the team has also been included at the end of each chapter. As active members of this team, cytopathologists can define their role in the management pathway and thus bring the patient and the microscope together as never before. The full text can be accessed online and images downloaded via Expert Consult.

Colposcopy, Principles and Practice Barbara S. Apgar,Gregory L. Brotzman,Mark Spitzer,2002 This richly illustrated textbook and atlas brings together high-quality, colour colpophotographs that highlight all the variations seen in colposcopic practice. Its unique organisation allows readers to easily see correlations between cytology, colposcopy, and histology, just as they would need to infer when examining patients. Each chapter addresses a specific topic, from basic science to clinical colposcopy, written and edited by a well-known, recognised expert on that subject. Atlas images are incorporated into the text alongside relevant discussions, and descriptive graphics clarify topics such as low and high grade CIN, and cancer and glandular lesions. Easy-to-read bulleted information throughout the chapters emphasise key points and allow readers to quickly locate the information they need. Multiple authors represent a collaboration of the best and most prestigious investigators and clinicians in the field, writing on their individual areas of expertise. Many high-quality, color colpophotographs promote critical pattern recognition skills that are fundamental to clinical practice. Bullet points throughout the chapters allow readers to quickly scan the text and save time when referencing a specific topic of interest. A list of key points at the end of the chapter serves as a brief summary and review of essential information. Sample cases illustrate important concepts in a clinically relevant context. The unique layout presents colposcopy, cytology, and histology pages in a format that makes correlations easy to see and understand. Patient management is outlined in clear, unambiguous

terms, including practical, evidence-based algorithms for virtually all possible scenarios.
