Harnessing Renewable Energy in Electric Power Systems Boaz Moselle,Jorge Padilla,Richard Schmalensee,2010-09-23 Reflecting its reliance on fossil fuels, the electric power industry produces the majority of the world's greenhouse gas emissions. The need for a revolution in the industry becomes further apparent given that 'decarbonization' means an increasing electrification of other sectors of the economy in particular, through a switch from

gasoline to electric vehicles. Of the options for producing electric power without significant greenhouse gas emissions, renewable energy is most attractive to policymakers, as it promises increased national self-reliance on energy supplies and the creation of new industries and jobs, without the safety and political concerns of nuclear power or the unproven technology of carbon capture and storage. Drawing on both economic theory and the experiences of the United States and EU member states, *Harnessing Renewable Energy* addresses the key questions surrounding renewable energy policies. How appropriate is the focus on renewable power as a primary tool for reducing greenhouse gas emissions? If renewable energy is given specific support, what form should that support take? What are the implications for power markets if renewable generation is widely adopted? Thorough and well-evidenced, this book will be of interest to a broad range of policymakers, the electric power industry, and economists who study energy and environmental issues.

Direct Democracy in the United States Shauna Reilly, Ryan M. Yonk, 2012 The increased use of direct democracy measures across the United States has brought attention to the individual petitioner however their motivations and goals continue to be an enigma. Drawing on behavioral, historical and legal analysis to provide a more concrete depiction of these individuals, expert contributors examine the true personalities, motivations and expectations, successes and failures of petitioners in the direct democracy process and how they culminate in policy formation across the United States. Six typologies; the zealot, the victim, the amateur, the lawyer, the professional, and the politician are identified and later applied to four key policy areas, taxation, health, the environment and education. A lucid contribution to the existing literature on direct democracy and an excellent resource for studying how petitioners are able to influence their communities beyond the ballot box.

The Clean Energy Transition Daniel J. Fiorino, 2022-09-12 Is the goal of a transition to clean energy at all realistic? If so, how could it be accomplished? Climate change poses a formidable challenge for twenty-first-century governments. Unless they can move to a clean energy system built on efficiency, renewables, electrification, and possibly complementary technologies like nuclear energy and carbon capture and storage, it will be all but impossible to avoid the worst impacts of climate change. In this book, Daniel Fiorino provides a comprehensive introduction to the politics and policies of a clean energy transition and how it may unfold nationally and globally. Across its nine chapters, he explores the current energy landscape and the different pathways and pitfalls on the road to decarbonization. All scenarios for decarbonizing, he argues, rely on aggressive efficiency, the rapid scale-up of renewables, and the electrification of most of what is left. Yet this

transition has to be accelerated and done effectively. There is little time left for second chances if we are to decarbonize later this century. The Clean Energy Transition will be an indispensable resource for students of energy politics, environmental studies, and public policy, as well as anyone interested in the energy issues of the day.

Addicted to Energy Elton B. Sherwin, 2010 In his new book, *Addicted to Energy*, Elton Sherwin, a Silicon Valley venture capitalist offers pragmatic and innovative solutions to the climate crisis. *Addicted to Energy* is written as a guidebook to a fictional governor, with advice on how to manage both the climate and energy crises. The book outlines practical steps that governments, businesses, and individuals can take to lower their energy consumption. Heavily researched, the book presents complex topics in simple, understandable, and sometimes amusing ways. Short and to the point, the author makes over fifty recommendations; most are shorter than three pages. The book contains many charts and graphs, as well as practical tips for homeowners, businesses, and local governments.

Green Indicators to Inform Circular Economy under Climate Change, 2nd edition Muhlis Can, Bodo Sturm, Jan Brussaers, 2025-10-10 The obstacle of climate change is among the major concerns that mankind is experiencing today. Climate change poses remarkable risks to the planet and human health such as extreme weather conditions, unpredictable

rain fall, decreasing of agricultural productivity, and lack of food. Thus, we need to find solutions to protect the environment and to maintain sustainable development. To do that, it is important to detect the impact of social and economic parameters on environmental outcomes such as economic structure, trade volume and value, human capital, education, globalization, green economy, and economic complexity. In this collection, we aim to expand our knowledge about the relationship between environment and different social and economic indicators which will provide us knowledge to make reliable and long-term plans. Under these circumstances, we need to identify the parameters that impact the environment both positively and negatively. Additionally, there is need that we prepare long-term plans to maintain technological, social, and economic development for a sustainable ecology and biological life. Thanks to this Research Topic, we aim to expand our knowledge about the potential micro- and macro-determinants of environmental quality and sustainable development such as economic activities, green economic and growth indicators (specifically with respect to developments in green economy, green trade, green finance, and green innovation) as they pertain to circular economy and changing economic complexity. Potential topics include but are not limited to: - Innovation, economic structure, and environmental quality - Trade and environment relationship - Green Economy Indicators such as Green Finance, Green Trade, Green Products, and Green Innovation, and their economic and environmental impacts - Economic complexity and its environmental consequences - Circular Economy as a driver of sustainable development - Theoretical formulation and empirical analysis of green economy and green growth - Economic and social determinants of sustainable development
