Kinematics and Dynamics of Machines Ashraf Omran, 2025-09-26 This textbook presents theory-based approaches to teaching and studying the kinematics and dynamics of machines, complemented by graphics and animations using contemporary software; MATLAB®, Simulink® and Simscape™ Multibody™. Students gain hands-on experience with relevant engineering software, developing skills in modeling, analysis, simulation, and animation while learning the course material. Instructors can guide students in creating their own systems, helping them better understand and optimize their designs. Emphasizing the ubiquity of machines, the text is informed by a wide variety of examples; it caters for the generic—such as the factory packing machine—but also draws on the more familiar—such as kitchen appliances—to highlight machines encountered in everyday life. The book provides a connection between the acquisition of marketable skills in computer modeling and study for an academic degree and has evolved from the author's teaching experience. Features of the textbook include: extensive use of examples in the text, covering numerical, graphical, analytical, and Simscape™ Multibody™ model-based techniques examples for students; end-of-chapter exercises allowing regular assessment of learning attainment; a pdf solutions manual for instructors adopting the book, available from SpringerLink; and lecture slides for use or adaptation by instructors. Chiefly intended for an upper-level undergraduate course in the design and kinematics of machines, this textbook also contains more advanced elements that extend its relevance into the sphere of the beginning graduate student.

Culture and Human-Robot Interaction in Militarized Spaces Julie Carpenter,2016-02-26 Explosive Ordnance Disposal (EOD) personnel are some of the most highly trained people in the military, with a job description that spans defusing unexploded ordnance to protecting VIP's and state dignitaries. EOD are also one of the first military groups to work with robots every day. These robots have become an increasingly important tool in EOD work, enabling people to work at safer distances in many dangerous situations. Based on exploratory research investigating interactions between EOD personnel and the robots they use, this study richly describes the nuances of these reciprocal influences, especially those related to operator emotion associated with the robots. In particular, this book examines the activities, processes and

contexts that influence or constrain everyday EOD human-robot interactions, what human factors are shaping the (robotic) technology and how people and culture are being changed by using it. The findings from this research have implications for future personnel training, and the refinement of robot design considerations for many fields that rely on critical small group communication and decision-making skills.

Architectural Coordination of Enterprise Transformation Henderik A. Proper,Robert Winter,Stephan Aier,Sybren de Kinderen,2018-04-05 Architectural coordination of enterprise transformation (ACET) integrates and aggregates local information and provides different viewpoints, such as financial, structural, or skill perspectives to the respective stakeholder groups, with the aim of creating a consensus and shared understanding of an enterprise transformation among the stakeholders. Its core purpose is to inform decision-makers with both local and enterprise-wide concerns so that the overall transformation goals can be successfully pursued, i.e. reducing inconsistencies and including local decisions in the overarching goals. This book consists of three major parts, framed by an introduction and a summary. To enable readers to gain a better understanding of the issues involved in real-world enterprise transformations as well as the possible role of architectural coordination and the associated challenges, Part I provides an analysis of status quo of corporate ACET practice. Part II then continues with an exploration of the challenges facing ACET from a theoretical perspective. Based on these challenges, Part III then presents a collection of components for a possible design theory for ACET. Instead of an integrated method, this collection of components constitutes method fragments that can be arranged in different ways depending on the perspective taken, the actual enterprise architecture management approach, the enterprise transformation type and the transformation's context.

Machine Design Robert L. Norton,2006 Machine Designpresents the subject matter in an up-to-date and thorough manner with a strong design emphasis. This textbook emphasizes both failure theory and analysis as well as emphasizing the synthesis and design aspects of machine elements. The book points out the commonality of the analytical approaches needed to design a wide variety of elements and emphasizes the use of computer-aided engineering as an approach to the design and analysis of these classes of problems. About 100 new problems will be added throughout the book, and certain topics are updated and enhanced.

Marketing of High-technology Products and Innovations Jakki J. Mohr,Sanjit Sengupta,Stanley F. Slater,2010 This title provides a thorough overview of the issues high-tech marketers must address, and provides a balance between conceptual discussions and examples; small and big business; products and services; and consumer and business-to-business marketing contexts.
