Regulation of Cancer Immune Checkpoints Jie Xu, 2020-03-17 This book systematically reviews the most important findings on cancer immune checkpoints, sharing essential insights into this rapidly evolving yet largely unexplored research topic. The past decade has seen major advances in cancer immune checkpoint therapy, which has demonstrated impressive clinical benefits. The family of checkpoints for mediating cancer immune evasion now includes CTLA-4, PD-1/PD-L1, CD27/CD70, FGL-1/LAG-3, Siglec-15, VISTA (PD-1L)/VSIG3, CD47/SIRPA, APOE/LILRB4, TIGIT, and many others. Despite these strides, most patients do not show lasting remission, and some cancers have been completely resistant to the therapy. The potentially lethal adverse effects of checkpoint blockade represent another major challenge, the mechanisms of which remain poorly understood. Compared to the cancer signaling pathways, such as p53 and Ras, mechanistic studies on immune checkpoint pathways are still in their infancy. To improve the responses to checkpoint blockade therapy and limit the adverse effects, it is essential to understand the molecular regulation of checkpoint molecules in both malignant and healthy cells/tissues. This book begins with an introduction to immune checkpoint therapy and its challenges, and subsequently describes the regulation of checkpoints at different levels. In closing, it discusses recent therapeutic developments based on mechanistic findings, and outlines goals for future translational studies. The book offers a valuable resource for researchers in the cancer immunotherapy field, helping to form a roadmap for checkpoint regulation and develop safer and more effective immunotherapies.

Under the Influence John C. Mero, 2015-05-16 What are the potentially negative consequences of an undeniably good public policy? Under the Influence examines how the Elks, one of the oldest lodge-based voluntary associations in America, may have been impacted by government policies such as DUI laws. To examine this empirically, author John C. Mero conducted interviews with fifty-five California and Florida Elk Exalted Rulers. What emerges from the interviews is a voluntary association in transition: having been affected by stricter DUI laws and other government policies over the past few decades, the Elks are reevaluating their approach to associational life. They have demonstrated a willingness to change with the times since their founding as the Jolly Corks in 1884, and—in response to the unintended consequences of more recent government policies—the Elks are seeking new opportunities to contribute to American civil society.

We Are Martians E. R. Dee, 2014-01-04 This hard science fiction novel from author E. R. Dee covers a span of nearly

twenty years in the lives of the Martian colonial founders and their children as they make the very rocky transition from a privatized establishment to one under control of the five major space nations on Earth who have to answer to bureaucrats, voters and taxpayers. This leads to revolt and eventually armed conflict as Earthers send forces to liberate Mars from the armed colonial terrorists who have taken over and hold planet hostage. The author has been in print since 1967 in a variety of publications.

The Transfer of Power Between Presidential Administrations Nicole L. Anslover, 2022-12-29 The Transfer of Power Between Presidential Administrations examines the problems that can occur when a new president enters office, with a focus on historical case studies. The transition between presidents—especially when changing parties—is a wildcard in U.S. foreign policy that often confuses or concerns nations engaged with the United States. Though there are systems in place to ensure information gets passed from one administration to another, ideas and their execution can change dramatically when a new president takes office. Using case studies of six different incoming administrations during the Cold War and 21st century, this book will explore how the successes and failures in presidential transitions have had long-term effects on U.S. foreign policy, grand strategy, and international position. Looking at transitions involving multiple presidents, this book offers a fresh perspective on how foreign policy is formulated and carried out. The book ends with an analysis of 21st-century transitions, making this work timely and important. This book will be of interest to students of modern American history, American politics and the modern presidency, and international relations.

Improving Bayesian Reasoning: What Works and Why? Gorka Navarrete, David R. Mandel, 2016-02-02 We confess that the first part of our title is somewhat of a misnomer. Bayesian reasoning is a normative approach to probabilistic belief revision and, as such, it is in need of no improvement. Rather, it is the typical individual whose reasoning and judgments often fall short of the Bayesian ideal who is the focus of improvement. What have we learnt from over a half-century of research and theory on this topic that could explain why people are often non-Bayesian? Can Bayesian reasoning be facilitated, and if so why? These are the questions that motivate this Frontiers in Psychology Research Topic. Bayes' theorem, named after English statistician, philosopher, and Presbyterian minister, Thomas Bayes, offers a method for updating one's prior probability of an hypothesis H on the basis of new data D such that $P(H|D) = P(D|H)P(H)/P(D)$. The first wave of psychological research, pioneered by Ward Edwards, revealed that people were overly conservative in updating their posterior probabilities (i.e., $P(D|H)$). A second wave, spearheaded by Daniel Kahneman and Amos Tversky, showed that people often ignored prior probabilities or base rates, where the priors had a frequentist interpretation, and hence were not Bayesians at all. In the 1990s, a third wave of research spurred by Leda Cosmides and John Tooby and by Gerd Gigerenzer and Ulrich Hoffrage showed that people can reason more like a Bayesian if only the information provided takes the form of (non-relativized) natural frequencies. Although Kahneman and Tversky had already noted the advantages of frequency representations, it was the third wave scholars who pushed the prescriptive agenda, arguing that there are feasible and effective methods for improving belief revision. Most scholars now agree that natural frequency representations do facilitate Bayesian reasoning. However, they do not agree on why this is so. The original third wave scholars favor an evolutionary account that posits human brain adaptation to natural frequency processing. But almost as soon as this view was proposed, other scholars challenged it, arguing that such evolutionary assumptions were not needed. The dominant opposing view has been that the benefit of natural frequencies is mainly due to the fact that such representations make the nested set relations perfectly transparent. Thus, people can more easily see what information they need to focus on and how to simply combine it. This Research Topic aims to take stock of where we are at present. Are we in a proto-fourth wave? If so, does it offer a synthesis of recent theoretical disagreements? The second part of the title orients the reader to the two main subtopics: what works and why? In terms of the first subtopic, we seek contributions that advance understanding of how to improve people's abilities to revise their beliefs and to integrate probabilistic information effectively. The second subtopic centers on

explaining why methods that improve non-Bayesian reasoning work as well as they do. In addressing that issue, we welcome both critical analyses of existing theories as well as fresh perspectives. For both subtopics, we welcome the full range of manuscript types.

Eating in US National Parks Kathleen LeBesco, 2024-02-26 This book presents a fascinating exploration of eating experiences within US national parks, explaining how, on what, and why people eat in national parks and how this has changed over the last century. National parks are enjoying unprecedented popularity, and they are especially popular sites for the expression of cosmopolitanism, an ideological outlook descended from the Romantics on whose vision the parks were originally founded. The book explores the constructed foodscape within US national parks, situating the romantic consumption ethos within the context of sociological work on distinction, culinary tourism, and culinary capital. It analyzes and problematizes elements of cosmopolitan taste and desire, examining food tourism in wilderness spaces that satisfies cosmopolitan hunger for authenticity and a certain type of self-making. Weaving together strands of research that have not been previously integrated, the book gleans meaning from concessions menus and park restaurant web pages and employs audience analysis to take stock of park restaurant visitors' contributions to restaurant review websites, as well as to understand how they represent their park eating experiences on social media. The book examines how satisfying cosmopolitan tastes in the parks creates profit for corporate concessioners, but also may produce bioregionalist successes and a recentering of Indigenous foodways. It concludes by exploring inroads to a better food experience in the parks, involving food products and processes that are regionally/locally specific, where tourists witness and participate in food production and enjoy commensality, but that are also non-extractive and show care for the environment and the people who inhabit it. This book will be of great interest to students and scholars of food studies, tourism and hospitality, sociology of culture, parks and recreation, American studies, and environmental studies. The book will also be of interest to parks and recreation decision makers, sustainable tourism leaders, and hospitality managers.
