Big Data, Data Mining and Data Science George Dimitoglou,Leonidas Deligiannidis,Hamid Arabnia,2024-12-30 Through the application of cutting-edge techniques like Big Data, Data Mining, and Data Science, it is possible to extract insights from massive datasets. These methodologies are crucial in enabling informed decision-making and driving transformative advancements across many fields, industries, and domains. This book offers an overview of latest tools, methods and approaches while also highlighting their practical use through various applications and case studies.

Semantic Applications Thomas Hoppe,Bernhard Humm,Anatol Reibold,2018-04-13 This book describes methodologies for developing semantic applications. Semantic applications are software applications which explicitly or implicitly use the semantics, i.e. the meaning of a domain terminology, in order to improve usability, correctness, and completeness. An example is semantic search, where synonyms and related terms are used for enriching the results of a simple text-based search. Ontologies, thesauri or controlled vocabularies are the centerpiece of semantic applications. The book includes technological and architectural best practices for corporate use. The authors are experts from industry and academia with experience in developing semantic applications.

Assessment Analytics in Education Muhittin Sahin,Dirk Ifenthaler,2024-05-07 This book is about the current state of research in online assessment. The growth of this field is set to accelerate exponentially with emerging opportunities for automatic data collection and analysis. Yet, the future of online assessment faces major challenges including, perhaps most importantly, the extent to which assessments, when enabled by technology, can serve simultaneously the needs of learners, teachers and those of the enterprise of education. This book details, specifically, the multiple ways in which online assessment can be utilized, such as: Providing virtual coaching or tutoring Offering appropriate scaffolding Allowing analysis of student decision-making Providing the mechanism for students to review and comment on each others digital creations Creating a space for online discussion Providing expert coaching for modeling and animation work With the increased availability of vast and highly varied amounts of data from learners, teachers, learning environments, and administrative systems within educational settings, further opportunities arise for advancing pedagogical assessment practice (Ifenthaler et al., 2018). This book fully details these opportunities, as well as privileges and constraints of analytics-enhanced assessment, harnessing formative as well as summative data from learners and their contexts in order to facilitate learning processes in

near real-time and help decisionmakers to improve learning environments.

Digital Hermeneutics II: Sources, Analysis, Interpretation, Annotation, and Curation Dennis Möbus, Christian Nawroth, Almut Leh, Uta Störl, Matthias Hemmje, 2025-11-20 This book constitutes the results of the Third International Workshop of the research cluster digital_culture at the FernUniversität in Hagen, Digital Hermeneutics 2023, which took place in Frankfurt am Main, Germany, during November 23-24, 2023. The 11 regular contributions focus on the development of the IVIS4DH research framework to support the interaction between humanities and computer science in an iterative research and knowledge generating process. The book also contains an introduction and evaluation of the topic written by the editors and their team.

On Collective Intelligence Theo J Bastiaens, Ulrike Baumöl, Bernd Krämer, 2010-10-12 Welcome to the proceedings of the inaugural Symposium on Collective Intelligence (COLLIN 2010). This was the first of a new series of events that will evolve over the coming years, and we were happy to hold the event in Hagen where the idea for this symposium was born. The participants visited Hagen in April, with excellent opportunities to get rain, wind and sun. Collective intelligence denotes a phenomenon according to which the purposeful interaction between individuals creates intelligent solutions and behaviors

that might not have come to existence without this concerted effort of a community. The members of such communities form a social network, typically over the Internet. They are engaged with each other over a sustained period of time to develop an area of innovation through collaboration and exchange of ideas, experiences and information. Leading-edge information and communication technologies (ICT) offer ample opportunities for enabling collective intelligence. COLLIN aims to become the flagship conference in the areas collective intelligence and ICT-enabled social networking, which is attracting more and more researchers and practitioners from both academia and industry.

German History in Modern Times William W. Hagen, 2012-02-13 This history of German-speaking central Europe offers a very wide perspective, emphasizing a succession of many-layered communal identities. It highlights the interplay of individual, society, culture and political power, contrasting German with Western patterns. Rather than treating 'the Germans' as a collective whole whose national history amounts to a cumulative biography, the book presents the pre-modern era of the Holy Roman Empire; the nineteenth century; the 1914-45 era of war, dictatorship and genocide; and the Cold War and post-Cold War eras since 1945 as successive worlds of German life, thought and mentality. This book's 'Germany' is polycentric and multicultural, including the multinational Austrian Habsburg Empire and the German Jews. Its approach to National Socialism offers a conceptually new understanding of the Holocaust. The book's numerous illustrations reveal German self-presentations and styles of life, which often contrast with Western ideas of Germany.

Spatio-Temporal Databases Manolis Koubarakis, Timos Sellis, Andrew U. Frank, Stéphane Grumbach, Ralf Hartmut Güting, Christian S. Jensen, Nikos Lorentzos, Yannis Manolopoulos, Enrico Nardelli, Barbara Pernici, Hans-Jörg Schek, Michel Scholl, Babis Theodoulidis, Nectaria Tryfona, 2003-10-02 A summary of research carried out in the CHOROCHRONOS Project, established as an EC-funded Training and Mobility Research Network with the objective of studying the design, implementation, and application of spatio-temporal database management systems. The nine coherent chapters by leading research groups are written in a tutorial style, making the research contributions of the project accessible to a wider audience interested in spatio-temporal information processing. Following an introductory overview, the book presents chapters on ontologies for spatio-temporal databases, conceptual models, spatio-temporal models and languages, access methods and query processing, architectures and implementation of spatio-temporal DBMS, interactive spatio-temporal documents, and future perspectives.
