**Earth Matters** DK, 2011-02-21 With a biome-by-biome structure that mirrors Mother Nature's own design, *Our Earth Matters* is a celebration of our fragile Earth, a warning to protect it, and an inspiring source book full of ideas for making a positive change. The book begins with a brief history of our planet's birth and development, revealing how an astonishingly unlikely series of accidents made Earth the only planet in the universe known to be suitable for life. As life flourished and spread, it changed the planet and created the biosphere. Scientists divide the biosphere into global ecosystems, or biomes, such as Desert, Ocean, Tropical Forest, and Grassland. Earth's delicate ecology is the unifying theme. Each section explores the unique ecological structure of a biome and reveals how human interference can upset the balance and damage the life-support systems upon which our existence depends. Reference pages make up the first part of each section, with maps showing the extent of the biome, and spreads on climate, natural history, and ecology explaining how the biome works. Subsequent spreads explore the threats arising from human activity and show how positive efforts can often overcome the

threats and preserve the biome. Throughout the book, spectacular and intimate photography showcases the living world's endless diversity and beauty, providing a compelling visual argument to support the book's core message.

*The Marine World* Frances Dipper, 2021-06-08 The Marine World is a book for everyone with an interest in the ocean, from the marine biologist or student wanting expert knowledge of a particular group to the naturalist or diver exploring the seashore and beyond. With colour illustrations, line drawings, more than 1,500 colour photographs, and with clear accessible text, this book encompasses all those organisms that live in, on and around the ocean, bringing together in a single text everything from the minuscule to the immense. It includes sections on all but the most obscure marine groups, covering invertebrate phyla from sponges to sea squirts, as well as plants, fungi, bacteria, fish, reptiles, mammals and birds. It incorporates information on identification, distribution, structure, biology, ecology, classification and conservation of each group, addressing the questions of 'what?', 'where?' and 'how?'. Today global warming, overfishing, ocean acidification and pollution are just a few of the ever increasing number of threats and challenges faced by ocean life. Without knowledge of the animals, plants and other organisms that live in the marine world, we cannot hope to support or implement successful conservation and management measures, nor truly appreciate the incredible wealth and variety of marine life. The Marine World is the product of a lifetime spent by Frances Dipper happily observing and studying marine organisms the world over. It has been brought to colourful life by a myriad of enthusiastic underwater photographers and by Marc Dando, the renowned natural history illustrator.
