Moisture and Buildings Arianna Brambilla, Alberto Sangiorgio, 2021-05-28 One in three homes, on average, suffer from excessive dampness and mould proliferation, with significant health and economic impacts. The combination of new construction methodologies, stricter airtightness requirements and the changing social and cultural context that influences the way we live inside buildings has created unprecedented challenges for the built environment. In modifying indoor and outdoor environments and the building envelopes that serve as a filter between the two, we are changing the physical parameters of the ways in which buildings behave and respond to climatic stimuli. Understanding and predicting the way in which buildings and moisture may interact should be an important step in the design process, aiming to minimise possible negative long-term consequences. Understanding and predicting the way in which buildings and moisture may interact is, today more than ever, essential yet difficult, as the experience of the past has lost its applicability. Moisture-related issues never have a simple solution, since they involve multiple factors, including design, construction, maintenance, materials, climate and occupation pattern. Thus, while the topic is attracting growing attention among researchers, designers and practitioners, the pace with which actual change is occurring is still too slow. *Moisture and Buildings* provides a critical overview of current research, knowledge and policy frameworks, and presents a comprehensive analysis of the implications of moisture and the importance of accounting for it during the design process. It responds to the urgent need for a systematic organization of the existing knowledge to identify research gaps and provide directions for future developments. The ultimate goal is to increase awareness of the multifaceted implications of hygrothermal phenomena and promote integrated design processes that lead to healthier and more durable constructions. - Presents advanced knowledge on hygrothermal processes and their interaction with buildings - Integrates the three key areas of moisture transport and its impact on buildings, including durability, human health and comfort - Considers the most useful computational tools for assessing moisture and building interactions - Includes a section on the main European, American and Australian building codes - Explains the risks of mold growth to human health, including growth models to assessment methods

Sustainable Building Adaptation Sara J. Wilkinson, Hilde Remøy, Craig Langston, 2014-04-07 How to adapt existing building stock is a problem being addressed by local and state governments worldwide. In most developed countries we now spend more on building adaptation than on new construction and there is an urgent need for greater knowledge and

awareness of what happens to commercial buildings over time. Sustainable Building Adaptation: innovations in decision-making is a significant contribution to understanding best practice in sustainable adaptations to existing commercial buildings by offering new knowledge-based theoretical and practical insights. Models used are grounded in results of case studies conducted within three collaborative construction project team settings in Australia and the Netherlands, and exemplars are drawn from the Americas, Asia, Japan, Korea and Europe to demonstrate the application of the knowledge more broadly. Results clearly demonstrate that the new models can assist with informed decision-making in adaptation that challenges some of the prevailing solutions based on empirical approaches and which do not accommodate the sustainability dimension. The emphasis is on demonstrating how the new knowledge can be applied by practitioners to deliver professionally relevant outcomes. The book offers guidance towards a balanced approach that incorporates sustainable and optimal approaches for effective management of sustainable adaptation of existing commercial buildings.

Wood & Fire Safety Linda Makovicka Osvaldova, Frank Markert, Samuel L. Zelinka, 2020-03-14 This proceedings volume presents new scientific works of the research workers and experts from the field of Wood Science & Fire. It looks into the properties of various tree species across the continents affecting the fire-technical properties of wood and wood-based materials, its modifications, fire-retardant methods and other technological processes that have an impact on wood ignition and burning. The results of these findings have a direct impact on Building Construction and Design describing the fire safety of wooden buildings, mainly large and multi-story ones. The results of these experiments and findings may be applied, or are directly implemented into Fire Science, Hazard Control, Building Safety which makes the application of wood and wood materials in buildings possible, while maintaining strict fire regulations. One part of the contributions focuses on the symbiosis of the material and the fire-fighting technologies. Wood burning has its own specific features, therefore, the fire protection technologies need to be updated regularly. It also includes the issue of the intervention of fire-fighting and rescue

teams in the fires of wooden buildings. Presentations deal with the issue of forest fires influenced by the climate changes, relief, fuel models based on the type and the age of the forest stand.

Construction Technology for Builders Glenn Costin, 2020-06-26 Construction Technology for Builders, 1e addresses requirements of the Certificate IV in Building and Construction (Building). The text addresses 14 competency units with learning activities and work sheets for downloading. The chapters are aligned to specific competency units, and the material in this text requires, and emphasises that the reader engage with Standards and Codes such as the NCC. Communication is a critical component of the building and construction process and the preparation of sketches and drawings is a vital part of that communication skill set; the text has a dedicated chapter on preparing building sketches and drawings. There are two chapters on structures, the first introducing the concepts underlying structural principles, and underpins the following chapter that applies this knowledge to the various elements of a building. Additional learning material, such as plans and specifications is provided in the Appendices to assist with the understanding of examples and exercises in the text.

Energy Law and the Environment Rosemary Lyster, Adrian Bradbrook, 2006-08-31 Unsustainable practices worldwide in energy production and consumption have led to a plethora of environmental problems. Until recently environmental law largely overlooked the relevance of energy production and consumption; energy was seen to be of little significance to the advancement of sustainable development. This has changed since 2000 with the global concern attached to climate change, the publication by the United Nations of the World Energy Assessment and the detailed consideration given to this issue at the World Summit on Sustainable Development in Johannesburg in 2002. Australia has been seen to be lagging behind the other major industrialised nations of the world in addressing sustainable energy issues. This book was first published in 2006.

Artificial Intelligence and Structural Engineering B. H. V. Topping, 1991 This work shows how Information and Communications Technology (ICT) can contribute to children's learning, how it can be integrated into a play based curriculum and how it relates to key areas of learning such as collaboration, communication, exploration and socio-dramatic play. It outlines the ICT requirements in the UK Foundation Stage Curriculum Guidance, and it examines the international

relevance and implications of ICT for young children. The text provides a critical account of the digital divide, suggesting practical strategies for all the individuals and institutions working towards social justice. It offers guidance for the development of centre based practice and on curriculum integration and the selection of developmentally appropriate educational software. It also explores ergonomic issues, as revealed by research. How should children sit at a computer? For how long? What are the risks? Emphasis is placed on the processes of policy development and the realization of change and guidance is given on how to use development plans and evaluation tools.
