**Visualising Business Transformation** Jonathan Whelan, Stephen Whitla, 2020-01-24 Business transformation typically involves a wide range of visualisation techniques, from the templates and diagrams used by managers to make better strategic choices, to the experience maps used by designers to understand customer needs, the technical models used by architects to propose possible solutions, and the pictorial representations used by change managers to engage stakeholder groups in dialogue. Up until now these approaches have always been dealt with in isolation, in the literature as well as in practice. This is surprising, because although they can look very different, and tend to be produced by distinct groups of people, they are all modelling different aspects of the same thing. Visualising Business Transformation draws them together for the first time into a coherent whole, so that readers from any background can expand their repertoire and understand the context and rationale for each technique across the transformation lifecycle. The book will appeal to a broad spectrum of readers involved in change, whether that is by creating change models themselves (strategists, architects, designers, engineers, business analysts, developers, illustrators, graphic facilitators, etc.), interpreting and using them (sponsors, business change managers, portfolio/programme/project managers, communicators, change champions, etc.), or supporting those involved in change indirectly (trainers, coaches, mentors, higher education establishments and professional training facilities).

**Management and Visualisation** Gordon Fletcher, 2022-12-27 As organisations of all sizes become increasingly digitalised, a core management challenge remains unresolved. The ability to successfully and sustainably connect the stated vision of an organisation with its strategic plans and, in turn, with the reported reality of day-to-day operations, is largely an elusive ambition, despite the many stated advantages provided by contemporary technologies. In this book, the case is made for visual management as a method of communications, planning, learning and reporting that connects the organisation in a single, meaningful and seamless way. Throughout this book, visual management is theorised around the position that all forms of management documentation are an artefact of human construction and of the organisation itself that reflect learned patterns of activity. The book places visual management as a more intuitive and seamless method of coordinating, learning and communicating across an organisation than more traditional formats of presenting management documents. Consciously assembling the artefacts of an organisation in order to manage it introduces a layer of criticality that encourages reflection and consistency that is often absent from current management practice. The benefits that a visual approach brings to organisational management are an increasing necessity, as machine learning, robotics and process automation remove traditional roles from organisations and necessitate new views on how individuals now fit into a data-informed business. The book contributes to the academic debate regarding resource-based and knowledge-based views of the organisation by advocating a different, more holistic viewpoint and will thus appeal to academics and researchers in this area. It would also benefit students across business disciplines, whilst the practical models and tools offered will benefit directors and managers looking to implement their own visual organisational language.
