Big Pacific Rebecca Tansley, 2017-06-06 The Pacific Ocean has been the focus of our fascination for as long as we have lived beside and on it. It covers one-third of Earth's surface -- greater than all of the planet's landmasses combined. It

contains half of the world's water, hides its deepest places, and is home to some of the most dazzling creatures known to science. Big Pacific presents the Pacific Ocean and its inhabitants as you have never seen them before, blending a wealth of images with spellbinding storytelling to take you into a realm teeming with exotic life yet rarely witnessed up close -- until now. The book is divided into four sections. The 'Passionate Pacific' looks at the private lives of sea creatures, with topics ranging from the mating behaviours of great white sharks to the monogamy of wolf eels, while 'Voracious Pacific' covers hunting and feeding. In 'Mysterious Pacific, ' you will be introduced to the Pacific's more extraordinary creatures, like the pufferfish and firefly squid, and explore some of the region's eerier locales, like the turtle tombs of Borneo and the skull caves of Papua New Guinea. 'Violent Pacific' examines the effects of events like natural disasters on the development of the Pacific Ocean's geography and the evolution of its marine life. Providing an unparalleled look at a diverse range of species, locations and natural phenomena, Big Pacific is truly an epic excursion to one of the world's last great frontiers--Back cover.

The Marvelous & Majestic, Giant Pacific Octopus, Enteroctopus Dofleini Walt S Smith, 2024-08-17 The Giant Pacific Octopus, *Enteroctopus dofleini*, is an agile swimmer that often travels long distances in search of prey at or near the ocean bottom. Intriguingly, *E. dofleini* is known to venture away from normal territories using a route not typically retraced for the return trip back to home base. Perhaps it is because the octopus suspects a predator might be lying in wait for an ambush along the original pathway. Genetic Analysis of the Population Structure of the Giant Pacific Octopus (Enteroctopus Dofleini) in South Central and Unalaska Bay, Alaska Rebecca K. Toussaint,Alaska Pacific University,2012 We isolated and developed 18 novel microsatellite markers for the giant Pacific octopus (Enteroctopus dofleini) and examined them for 31 individuals from Prince William Sound (PWS), Alaska. These loci displayed moderate levels of allelic diversity (averaging 11 alleles per locus) and heterozygosity (averaging 65%). Seven loci deviated from hardy Weinberg Equilibrium (HWE) due to heterozygote deficiency for the PWS population, although deviations were not observed for all these loci in other populations, suggesting the PWS population is not in mutation-drift equilibrium. These novel microsatellite loci yielded sufficient genetic diversity for potential use in population genetics, individual identification, and parentage studies.
