**New Trends in Fractional Differential Equations with Real-World Applications in Physics** Jagdev Singh, Jordan Yankov Hristov, Zakia Hammouch, 2020-12-30 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! *New Numerical and Analytical Methods for Nonlinear Partial Differential Equations with Applications in Quantum Physics* Mustafa Inc, Xiao-Jun Yang, Devendra Kumar, 2023-11-20 Various numerical and analytical methods have been used to investigate the models of real-world phenomena. Namely, real-world models from quantum physics have been investigated by many researchers. This Research Topic aims to promote and exchange new and important theoretical and numerical results to study the dynamics of complex physical systems. In particular, the Research Topic will focus on numerical and analytical methods for nonlinear partial differential equations which have applications for quantum physical systems. Authors are encouraged to introduce their latest original research articles. The Research Topic will cover, but is not limited to, the following themes: - Mathematical methods in physics - Representations of Lie groups in physics - Quantum fields - Advanced numerical methods and techniques for nonlinear partial differential equations - Schrödinger classical and fractional operators - Conservation laws

*Approximation Methods and Analytical Modeling Using Partial Differential Equations* Tamara Fastovska, Yurii Kolomoitsev, Kateryna Buryachenko, Marina Chugunova, 2025-03-28 Adequate mathematical modeling is the key to success for many real-world projects in engineering, medicine, and other applied areas. As soon as an appropriate mathematical model is developed, it can be comprehensively analyzed by a broad spectrum of available mathematical methods. For example, compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious

diseases and in mathematical models of population genetics. While the existence of an optimal solution under certain condition can be often proved rigorously, this does not always mean that such a solution is easy to implement in practice. Finding a reasonable approximation can in itself be a challenging research problem. This Research Topic is devoted to modeling, analysis, and approximation problems whose solutions exploit and explore the theory of partial differential equations. It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas. Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions (removability conditions for singularities), the dependence of the local asymptotic property of these solutions on initial and boundary data, and also the existence of solutions. Contributors are particularly encouraged to focus on anisotropic models: analyzing the preconditions on the strength of the anisotropy, and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations. The qualitative analysis and analytical results should be confirmed by the numerically observed solution behavior.

**Unsteady Supersonic Flow** John Miles,1955 The following monograph is intended to survey they application of the

theory of perfect fluid flow to the prediction of the aerodynamic forces that act on thin wings and slender bodies as a result of small, unsteady motions with respect to an equilibrium configuration of uniform, supersonic flight. In addition, certain aspects of the corresponding subsonic problem are taken up (in Chapters 1 and 2) insofar as they afford informative comparisons with their supersonic counterparts.--Preface.

La cour d'appel de l'AOF Dominique Sarr,2019-07-09 Dominique Sarr porte un regard lucide sur la Cour d'appel de l'Afrique occidentale française en dépassant la seule description d'une institution dont il analyse mérites et défauts pour en déceler les héritages et évoquer ce que les élites nées de l'indépendance en ont conservé ou rejeté. Il traduit une volonté de programmer une « autre histoire du droit », faisant le lien entre plusieurs civilisations. Il décrit les réalités d'une colonisation française qui, politiquement accrochée à un discours colonial prônant l'unité de civilisation par la voie d'une assimilation juridique, doit accepter que soit privilégiée la recherche d'une coexistence harmonieuse par la reconnaissance de deux ordres juridiques distincts.
