Electromagnetic Fields in Electrical Engineering A. Savini,J. Turowski,2012-12-06 This book is the collection of the contributions offered at the International Symposium on Electromagnetic Fields in Electrical Engineering, ISEF '87, held in Pavia, Italy, in September 1987. The Symposium was attended by specialists engaged in both theoretical and applied

research in low-frequency electromagnetism. The charming atmosphere of Pavia and its ancient university provided a very effective environment to discuss the latest results in the field and, at the same time, to enjoy the company of colleagues and friends coming from over 15 countries. The contributions have been grouped into 7 chapters devoted to fundamental problems, computer programs, transformers, rotating electrical machines, mechanical and thermal effects, various applications and synthesis, respectively. Such a classification is merely to help the reader because a few papers could be put in several chapters. Over the past two decades electromagnetic field computations have received a big impulse by the large availability of digital computers with better and better performances in speed and capacity. Many various methods have been developed but not all of them appear convenient enough for practical engineering use. In fact, the technical and industrial challenges set some principal attributes and criteria for good computation methods. They should be relatively easy to use, fit into moderately sized computers, yield useful design data, maintain flexibility with minimum cost in time and effort.

Peer Interaction and Second Language Learning Jenefer Philp, Rebecca Adams, Noriko Iwashita, 2013-11-07 Peer Interaction and Second Language Learning synthesizes the existing body of research on the role of peer interaction in second language learning in one comprehensive volume. In spite of the many hours that language learners spend interacting with peers in the classroom, there is a tendency to evaluate the usefulness of this time by comparison to whole class interaction with the teacher. Yet teachers are teachers and peers are peers – as partners in interaction, they are likely to offer very different kinds of learning opportunities. This book encourages researchers and instructors alike to take a new look at the potential of peer interaction to foster second language development. Acknowledging the context of peer interaction as highly dynamic and complex, the book considers the strengths and limitations of peer work from a range of theoretical perspectives. In doing so, Peer Interaction and Second Language Learning clarifies features of effective peer interaction for second language learning across a range of educational contexts, age spans, proficiency levels, and classroom tasks and settings.

AETA 2018 - Recent Advances in Electrical Engineering and Related Sciences: Theory and Application Ivan Zelinka, Pavel Brandstetter, Tran Trong Dao, Vo Hoang Duy, Sang Bong Kim, 2019-04-13 These proceedings address a broad range of topic areas, including telecommunication, power systems, digital signal processing, robotics, control systems, renewable energy, power electronics, soft computing and more. Today's world is based on vitally important technologies that combine e.g. electronics, cybernetics, computer science, telecommunication, and physics. However, since the advent of these technologies, we have been confronted with numerous technological challenges such as finding optimal solutions to various problems regarding controlling technologies, signal processing, power source design, robotics, etc. Readers will find papers on these and other topics, which share fresh ideas and provide state-of-the-art overviews. They will also benefit practitioners, who can easily apply the issues discussed here to solve real-life problems in their own work. Accordingly, the proceedings offer a valuable resource for all scientists and engineers pursuing research and applications in the above-mentioned fields.

Domains and Directions in the Development of TBLT Martin Bygate, 2015-11-15 This volume brings together contemporary position statements and research reviews which were originally presented as Plenary Addresses to the Biennial International Conference on Task-Based Language Teaching, between 2005 and 2013. It thus assembles up-to-date reflections, critiques, and recommendations from influential researchers working within the TBLT paradigm over the last 30 years, thereby also highlighting most of the major theoretical perspectives so far developed. While the plenarists structured their chapters around their original presentations, they have been invited to update their thinking as they feel appropriate and in response to recent developments in the field. The collection thus offers representative and accessible coverage of a range of approaches to the overall philosophy of TBLT, to the relationship between TBLT and the study of second language acquisition, and to the development and implementation of TBLT as a comprehensive approach to language education, curriculum, and pedagogy.
