Fundamentals of Global Air Transport Geography George Arbuckle, 2025-04-14 The commercial air transport industry can be broadly split into three component parts: airlines, airports and aircraft. Each of these components is shaped by geography, insofar as each is influenced by places, landscapes, environments, people and their various interactions. Conversely, air transport plays a large role in shaping the various themes of geography and the position of our physical, human and environmental world. It connects people, cultures and businesses across every continent and generates economic growth, allows international trade to occur and develops tourism. It can also be involved in creating negative outputs, such as emissions, noise and loss of biodiversity, which can have a large impact on the planet and quality of life. A lack of air transport links can also have a significantly negative impact on world regions in terms of economic and cultural development. In short, air transport and geography are inextricably linked. *Fundamentals of Global Air Transport Geography* details the geography of the global commercial air transport industry. The book aims to provide an understanding of these key areas at an introductory level, in order to be accessible to students and non-technical airport/airline management. A key theme throughout the book will not only be how geographical issues have influenced air transport, but also how air transport continues to influence geography. Each chapter boasts a range of features aimed at enhancing the reader's understanding, including learning objectives, discussion questions and case studies, and lecturers can find supporting resources including PowerPoint slides and teaching notes online.

The City in Transgression Benedict Anderson, 2020-07-27 *The City in Transgression* explores the unacknowledged, neglected, and ill-defined spaces of the built environment and their transition into places of resistance and residence by refugees, asylum seekers, migrants, the homeless, and the disadvantaged. The book draws on urban and spatial theory, socio-economic factors, public space, and architecture to offer an intimate look at how urban sites and infrastructure are transformed into spaces for occupation. Anderson proposes that the varied innovations and adaptations of urban spaces enacted by such marginalized figures – for whom there are no other options – herald a radical new spatial programming of cities. The book explores cities and sites such as Mexico City and London, the Mexican/US border, the Calais Jungle, and Palestinian camps in Beirut and utilizes concepts associated with ‘mobility’ – such as anarchy, vagrancy, and transgression – alongside photography, 3D modelling, and 2D imagery. From this constellation of materials and analysis, a radical spatial picture of the city in transgression emerges. By focusing on the ‘underside of urbanism’, *The City in Transgression* reveals the potential for new spatial networks that can cultivate the potential for self-organization so as to counter the existing dominant urban models of capital and property and to confront some of the major issues facing cities amid an age of global human mobility. This book is valuable reading for those interested in architectural theory, modern history, human geography

and mobility, climate change, urban design, and transformation.
