**Proceedings of the 15th Asia Pacific Physics Conference** Hyoungh Joon Choi,Takhee Lee,Woo-Sung Jung,2024-12-27

This book gathers papers of the proceedings of the 15th Asia Pacific Physics Conference (APPC15) which is organized by the Association of Asia Pacific Physical Societies (AAPPS), and the conference was held almost on-line from 21 to 26 August 2022 and partly both on-line and on-site in Seoul, Korea. And this proceedings mainly covers all the fields in physics such as Applied Physics, Astrophysics, Cosmology, Gravitation, Atomic and Molecular Physics, Condensed Matter Physics, Nuclear Physics, Particles and Fields, Physics Education, Plasma Physics, and Statistical Physics. The main target of this proceedings is the physicists who would like to learn the recent research trends, particularly, the physics society members who have rather difficulties to attend many conferences due to limited research grants. And especially it can be a good introduction/reference to graduates and post-doc level researchers.

**The New York Times Book of Physics and Astronomy** Cornelia Dean,2013-09-03 From the discovery of distant galaxies and black holes to the tiny interstices of the atom, here is the very best on physics and astronomy from the New York Times! The newspaper of record has always prided itself on its award-winning science coverage, and these 125 articles from its archives are the very best, covering more than a century of breakthroughs, setbacks, and mysteries. Selected by former science editor Cornelia Dean, they feature such esteemed and Pulitzer Prize-winning writers as Malcolm W. Browne on teleporting, antimatter atoms, and the physics of traffic jams; James Glanz on string theory; George Johnson on quantum physics; William L. Laurence on Bohr and Einstein; Dennis Overbye on the recent discovery of the Higgs Boson; Walter Sullivan on the colliding beam machine; and more.

Existential Physics Sabine Hossenfelder,2022-08-09 A NEW YORK TIMES BESTSELLER “An informed and entertaining guide to what science can and cannot tell us.” —The Wall Street Journal “Stimulating . . . encourage[s] readers to push past well-trod assumptions [...] and have fun doing so.” —Science Magazine From renowned physicist and creator of the YouTube series “Science without the Gobbledygook,” a book that takes a no-nonsense approach to life’s biggest questions, and wrestles with what physics really says about the human condition Not only can we not currently explain the origin of the

universe, it is questionable we will ever be able to explain it. The notion that there are universes within particles, or that particles are conscious, is ascientific, as is the hypothesis that our universe is a computer simulation. On the other hand, the idea that the universe itself is conscious is difficult to rule out entirely. According to Sabine Hossenfelder, it is not a coincidence that quantum entanglement and vacuum energy have become the go-to explanations of alternative healers, or that people believe their deceased grandmother is still alive because of quantum mechanics. Science and religion have the same roots, and they still tackle some of the same questions: Where do we come from? Where do we go to? How much can we know? The area of science that is closest to answering these questions is physics. Over the last century, physicists have learned a lot about which spiritual ideas are still compatible with the laws of nature. Not always, though, have they stayed on the scientific side of the debate. In this lively, thought-provoking book, Hossenfelder takes on the biggest questions in physics: Does the past still exist? Do particles think? Was the universe made for us? Has physics ruled out free will? Will we ever have a theory of everything? She lays out how far physicists are on the way to answering these questions, where the current limits are, and what questions might well remain unanswerable forever. Her book offers a no-nonsense yet entertaining take on some of the toughest riddles in existence, and will give the reader a solid grasp on what we know—and what we don't know.

Psychedelic Humanities Erika Dyck, Tehseen Noorani, Nicolas Langlitz, Alex Dymock, Anne Katrin Schlag, Oliver Davis, 2024-06-19 Psychedelics are part of a resurgence of interest in consciousness studies, especially as altered states of consciousness are being re-examined in the context of psychedelic-assisted therapies. To date, discussions about psychedelics in modern medicine have been dominated by studies in biomedicine. However, given that cultural factors play a significant role in the subjective effects of psychedelics, psychedelics can be considered a uniquely powerful point of convergence between the cultural and biomedical. Writers and artists, alongside psychiatrists and pharmacologists, have participated in shaping 'the psychedelic experience' by drawing on a rich set of approaches that blend narrative, arts, and humanities concepts to explain and interpret psychedelic experiences and explore consciousness for creative purposes. Psychedelic studies, past and present, emphasize the importance of 'set and setting' or the context of psychedelic consumption and its paramount importance in shaping psychedelic experiences. These non-pharmacological factors rely on a different set of methods and interpretations that necessarily rely on studies conducted outside of the biomedical sciences.
