British Petroleum and Global Oil 1950-1975 James Bamberg, 2000-08-31 Dramatic narrative, arresting analysis and original research are combined in this book, which addresses the history of one of the world's biggest oil businesses between 1950 and 1975. Assessing BP's comparative performance, the book focuses on how BP responded politically, economically and culturally to the rise of new competitors, the decline of Britain's imperial power, and the determination of nation states to assert national sovereignty over the vital commodity, oil. Climaxing with the OPEC crisis which shook the world in the 1970s, the book - authorised by BP with uniquely unrestricted access to its records - is of wide interest and relevance, especially for those interested in big business, globalisation and nationalism, international affairs, OPEC, the Middle East, and oil.

Investment and Production Vernon L. Smith, 1961 Developing a unified theory of production and investment, Vernon L. Smith explores the empirical and theoretical nature of the interdependence between short-run current account production decisions and long-run investment planning, taking into account such technological factors as equipment replacement. The book builds an explicit theory of production planning by integrating production, investment, and equipment replacement policy, derives the decision implications of the use of durable capital goods, and examines the production function concept and the production decision process in engineering design and in general business practice.

Systems Engineering and Analysis Benjamin S. Blanchard, Wolter J. Fabrycky, 1990 This book is about systems. It concentrates on the engineering of human-made systems and on systems analysis. In the first case, emphasis is on the process of bringing systems into being, beginning with the identification of a need and extending through requirements determination, functional analysis and allocation, design synthesis and evaluation, validation, operation and support, and disposal. In the second case, focus is on the improvement of systems already in being. By employing the iterative process of analysis, evaluation, modification, and feedback most systems now in existence can be improved in their effectiveness, product quality, affordability, and stakeholder satisfaction.--BOOK JACKET.

Profiles in Operations Research Arjang A. Assad, Saul I. Gass, 2011-06-28 Profiles in Operations Research: Pioneers and Innovators recounts the development of the field of Operations Research (OR), the science of decision making. The book traces the development of OR from its military origins to a mature discipline that is recognized worldwide for its contributions to managerial planning and complex global operations. Over the past six decades, OR analyses have impacted our daily lives: when making an airline or hotel reservation, waiting in line at a bank, getting the correctly blended fuel at the gas station, and ensuring that the book you are holding arrived at its destination on time. OR originated in the late 1930s when British scientists from various disciplines joined Royal Air Force officers to determine the most effective way to employ new radar technology for intercepting enemy aircraft. During World War II, similar applied research groups were formed to study, test, and evaluate military operations on both sides of the Atlantic. Their work resulted in great improvements—OR helped the Allies win the war. The scientific field that emerged from these studies was called operational research in the U.K. and operations research in the U.S. Today, OR provides a broad and powerful science to aid decision making. Profiles describes the lives and contributions of 43 OR pioneers and innovators and relates how these individuals, with varying backgrounds and diverse interests, were drawn to the nascent field of OR. The profiles also describe how OR techniques and applications expanded considerably beyond the military context to find new domains in business and industry. In addition to their scientific contributions, these profiles capture the life stories of the individuals—interwoven with personal tales, vivid vignettes, family backgrounds, and views of the mission and future of OR. Collectively, the profiles recount the fascinating story of the growth and development of a field enriched by the convergence of different disciplines. The Editors: Arjang A. Assad is Dean of the School of Management, University at Buffalo, State University of New York. Saul I. Gass is Professor

Emeritus, Department of Decision, Operations & Information Technologies, Smith School of Business, University of Maryland, College Park. From the Reviews Profiles In Operations Research: Pioneers and Innovators. Book Review by Nigel Cummings: U.K. OR Society's e-journal, Inside OR., Sept 2011. I can thoroughly recommend this book. I found it both enlightening and undeniably gripping, so much so in fact, you may find it difficult to put it down once you have commenced reading it. Arjang A. Assad and Saul I. Gass have created a masterwork which will serve to immortalise [stet] the pioneers of O.R. for many years to come. *For a list of all known typos, plus further discussion on the book, please visit <http://profilesinoperationsresearch.com>.
