Proceedings of the Conference on Natural Resources and Life Sciences 2022 (NRLS-BIO 2022) Johan Sukweenadhi, Finna Setiawan, 2023-12-26 This is an open access book. Molecular biology has given a great impact in life science investigation. The advances in molecular biology over the last several decades have boosted research and product development in many disciplines of life science, including Biotechnology and Pharmacy. This advances comprise: (1) the progression of more sophisticated techniques in molecular biology with a broad, interdisciplinary applications; (2) the expanding flow of information of technical novelties and scientific discoveries across scientific community; and (3) the development of more sophisticated software and continuously updated databases. This has changed the rationale and approach of experimentations giving rise to revolutionizing discoveries in many fields of science. It has become evident that the deregulation of molecular processes in body is associated with, and in certain circumstances is the direct cause of, a wide range of pathological conditions. It is necessary to mention the biomedical relevance of molecular biology-related investigations for drug discovery and the development of a more personalized medicine. Given the rapidly changing and continuously evolving nature of the molecular biology field, we can anticipate that the revolutionary impact of molecular biology in life sciences is only at the beginning and is far from being finished. To highlight the rapidly growing research and product development in the field of Biotechnology and Pharmacy, the 4th International Conference on Natural Resources and Life Sciences (NRLS) themed Biotechnology- and pharmacy-driven research and product development is presented. Following the successful program of 1st, 2nd, and 3rd NRLS, we intend to hold the next two-day conference along with a one-day optional workshop in 4th NRLS, as a scientific forum for biotechnology and pharmacy researchers and product developers to discuss the recent advances in the fields and their application. It is a great pleasure to invite you to the forthcoming 4th NRLS Conference, which will be held virtually, on August 24th-25th 2022, and the following onsite workshop on August 26th, 2022.

Metabolic Engineering for Bioactive Compounds Vipin Chandra Kalia, Adesh Kumar Saini, 2017-10-07 This book comprehensively discusses the latest research in the area of metabolic engineering. Metabolic engineering solutions for bioactive compounds are now being derived by means of heterologous gene expression, in a wide range of organisms. The book provides an overview of the model systems being employed for metabolic manipulation to yield bioactive molecules,

such as single-cell proteins, antibody generation, metabolites, proteases, chaperones, therapeutic proteins, nanomaterials, polymeric conjugates, dendrimers and nanoassemblies, Escherichia coli, Agrobacterium, Saccharomyces cerevisiae and cell lines, etc. In addition, it shares insights into the scope of these methods in the areas of prevention, diagnosis and treatment of diseases, e.g. immunotherapy for curing various diseases like cancer, allergies, autoimmune diseases, etc.

The Natural Healing of Disease by Ayurvedic Herbs Ram Babu Sao, 2025-11-17 This book “The Natural Healing of Disease by Ayurvedic Herbs” is my accomplishment for the benefit of the common man. I have learnt about ayurvedic remedies based on Ayurveda teachings and many other books on “Home Remedies” for prevention and cure of diseases” and have given the concise matters in this book. Traditional Indian ayurvedic medicine is becoming increasingly popular, with many chronic conditions responding to it well. Detailed knowledge of the action of the natural gift like, food, spices, and medicinal plants is needed to understand their potential influence fully. While societal use of ayurvedic plants and Indian spices is commonplace, without ill effect, the use of more concentrated products made from single plants, often in the form of teas or tablets, is of more concern. The mechanisms by which poly-herbal extracts act differ in many respects from the actions of drugs. Even though ayurvedic medicines are based on natural herbal materials, their safety depends on their method of administration, taking into account individuals’ needs and their specific disease conditions. Ayurvedic herb frequently relies on lifelong medication, on which patients come to depend. Ayurvedic herbs can help improve patients’ symptoms by reducing their cortisone and analgesic usage, thereby enhancing their quality of life. Ayurvedic herb is becoming increasingly popular, which is a positive development, care must be taken against its mismanagement, especially given the vast array of spurious “ayurvedic” products currently on the market. Ayurvedic practice is around 3000 years old, with a long history of managing the disease. The three basic principles of Dosha (Vata, Pitta, and Kapha), are derived from 5 elements of Indian philosophy. Ayurveda Dosha can be identified as regulatory control factors for fundamental physiologic processes in living systems that maintain their identity throughout biologic history. Vata and its sub-dosha regulating input/output processes and motion; Pitta and its sub-dosha regulating throughput, turnover, and hence energy; and Kapha and its sub-dosha regulating storage, structure, and lubrication. Ayurvedic herb seeks to normalize body functions with varied techniques based on the factors such as food, activity, climate and stress including advice on internal herbal preparations, purification treatments (Pancha karma), and surgical methods (shailya). Oral administration routes play a major role in influencing individuals’ Dosha, via the ingestion of food, spices, and medicinal plants. These elements are influencing Dosha in different ways: stabilizing, disturbing, and supporting the body’s healthy state. Detailed knowledge of the action of food, spices, and medicinal plants is needed in order to understand their potential influence fully. Food plays a major role in ayurvedic practice by supporting the body’s healing processes. Metabolic diseases and diseases of the gastrointestinal tract are directly influenced by food. Food can also indirectly affect diseases of the skin, muscles, and joints,

as well as a neurological, gynaecological, and psychological disease.

Green Remedies: The Science of Plant-Based Solutions for Diabetes Anil Kumar, Latika Yadav, Mohit Saini, Sanmati Kumar Jain, 2025-06-09 The prevalence of diabetes mellitus, especially Type 2 diabetes, has grown into a global health crisis affecting millions. Despite advances in synthetic therapeutics, long-term glycemic control and management of associated complications continue to present challenges. In response, researchers and clinicians have increasingly turned toward traditional knowledge and natural remedies, particularly plant-derived phytochemicals, as complementary or alternative strategies for diabetes management. This book, Green Remedies: The Science of Plant-Based Solutions for Diabetes, presents a comprehensive and evidence-based exploration of key botanicals that have demonstrated antidiabetic potential. Each

chapter delves into the phytochemistry, pharmacology, molecular mechanisms, and therapeutic relevance of specific medicinal plants such as *Momordica charantia* (bitter melon), *Cinnamomum verum* (cinnamon), *Allium sativum* (garlic), and *Trigonella foenum-graecum* (fenugreek). Bridging traditional knowledge with modern scientific insights, the contributors of this volume have rigorously analyzed both preclinical and clinical data to evaluate the safety, efficacy, and synergistic potential of these plant-based interventions. The book also addresses challenges in standardization, bioavailability, formulation science, and the need for robust clinical validation. We hope that this work serves as a valuable reference for researchers, clinicians, students, and industry professionals involved in the fields of pharmacognosy, integrative medicine, nutrition science, and drug discovery.
