

The Evolution Of Desire

Edward Caird

The Evolution of Desire David M. Buss, 2016-12-27 A “drop-dead shocker” (Washington Post Book World) that uses evolutionary psychology to explain human mating and the mysteries of love. If we all want love, why is there so much conflict in our most cherished relationships? To answer this question, we must look into our evolutionary past, argues prominent psychologist David M. Buss. Based on one of the largest studies of human mating ever undertaken, encompassing more than 10,000 people of all ages from thirty-seven cultures worldwide, *The Evolution of Desire* is the first work to present a unified theory of human mating behavior. Drawing on a wide range of examples of mating behavior — from lovebugs to elephant seals, from the Yanomamö tribe of Venezuela to online dating apps — Buss reveals what women want, what men want, and why their desires radically differ. Love has a central place in human sexual psychology, but conflict, competition, and manipulation also pervade human mating — something we must confront in order to control our own mating destiny. Updated to reflect the very latest scientific research on human mating, this definitive edition of this classic work of evolutionary psychology explains the powerful forces that shape our most intimate desires.

Summary of David M. Buss's *The Evolution of Desire* Everest Media, 2022-03-31T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 The elements of human mating are extremely confusing. We grow up believing in true love, finding our one and only, and assuming that once we do, we will live happily ever after. But reality rarely coincides with our beliefs. #2 Sexual selection is the process by which certain characteristics are chosen based on their mating benefits, instead of their survival benefits. It takes two forms: same-sex competition, in which members of the same sex compete with each other, and mate choice, in which individuals choose a mate based on their preferences for particular qualities. #3 The theory of sexual selection was first developed to explain mating behavior, and it was fiercely resisted by male scientists for over a century because it seemed to grant too much power to females. #4 I began an international study to see how mates are selected in different cultures, and found that many of the findings did not agree with conventional thinking. They forced a shift from the standard view of men's and women's sexual psychology.

The Group as an Object of Desire Morris Nitsun, 2013-05-13 Why do people find it so difficult to talk openly about sex? In this original and ground-breaking book, Morris Nitsun argues that desire and sexuality are key components of human experience that have been marginalized in the group psychotherapy literature. Drawing on theory from psychoanalysis,

developmental psychology and sociology, while keeping the group firmly in focus, he creates a picture of the potential in group therapy for the most intimate narrative. Highlighting current concerns about sexual identity, boundary transgression and what constitutes effective psychotherapy, detailed clinical illustrations cover areas such as: The erotic connection The dissociation of desire The group as witness Erotic transference and counter-transference Psychotherapists and all those interested in sexual development and diversity will value the challenging approach to sexuality this book offers.

The evolution of modesty, the phenomena of sexual periodicity, auto-erotism Havelock Ellis, 1910

The Evolution of Educational Theory John Adams, 1912

The Evolution of Religion Edward Caird, 1907

The Science of Romance Nigel Barber, 2011-03 ...excellent: accurate, entertaining and thought-provoking... - American Scientist Virtually anyone interested in gender studies, human sexuality, the application of evolutionary theory to behavior, or psychology in general should consider this fascinating book must reading. - Booklist In this work on how evolution affects how we behave in the romantic and sexual realms, the author . . . kicks away Cupid in favor of Darwin and the result is fascinating Barber is seemingly inexhaustible when it comes to diversity of thought His accessible and lively writing keeps the book from feeling too wide-ranging and scholarly. . . . those who don't mind considering that romantic inclinations may be in one's genes and not in one's heart will find much to chew on in this weighty addition to the field of evolutionary psychology. -ForeWord Magazine Nigel Barber is one of the most innovative and intriguing investigators currently writing in the field of evolutionary psychology. His insights are always novel and provocative, challenging our preconceptions and encouraging us to consider alternative perspectives on gender differences and romantic and sexual behavior. His observations are certain to generate discussion from scientists, and from anyone who has ever been mystified by love. - Michael Cunningham, Ph.D., Professor of Psychology, University of Louisville, and President, International Network on Personal Relationships Recent advances in evolutionary psychology and biology have revolutionized the understanding of human courtship, marriage, and relationships. The Science of Romance provides an accessible and entertaining look at this new research and explores many of the implications for sexual and romantic relationships. The book is a pleasure to read and is highly recommended to the reader who wishes to better understand human relationships or wants an introduction to evolutionary psychology. - David C. Geary, Ph.D., Middlebush Professor of Psychological Sciences, University of Missouri at Columbia, and author of Male, Female: The Evolution of Human Sex Differences A gripping book throughout--scientifically sound and wonderfully illustrated with real life examples; must reading for everyone concerned with human mating, which is just about everyone. - David M. Buss, author of The Evolution of Desire: Strategies of Human Mating Have you ever wondered why divorce is so much more common now than a century ago? Why the sex appeal of certain body types and clothing styles changes so dramatically over

time? Why so many liberated young women today prefer emotional commitment from men while their male counterparts seem always more interested in sowing their wild oats? According to evolutionary psychologist Nigel Barber, each of these aspects of modern life reflects two million years of hominid evolution. In *The Science of Romance* he explains that much of our present behavior can be traced back to the ancient evolved motives of our hunter-gatherer ancestors. In short, we exhibit the behaviors that have evolved over millennia to increase the reproductive success of the species. Also drawing on the mating behavior of various animals, Barber finds illuminating comparisons that help to explain human actions and reactions. Barber delves into a host of interesting topics: dating competition and aggression; female courtship signals that subtly manipulate male behavior; how exposure to different sex hormones shapes the evolving brain in utero, which may account for the different behaviors of men and women; and much more. This absorbing book educates and entertains, while showing that many seemingly irrational aspects of our intimate romantic behavior make sense when understood in terms of our prehistoric ancestors and evolution. Nigel Barber, Ph.D. (Portland, ME), formerly an assistant professor of psychology at Birmingham-Southern College, is now a freelance writer and researcher, and the author of *Why Parents Matter: Parental Investment and Child*

The Botany of Desire Michael Pollan, 2002-05-28 "Pollan shines a light on our own nature as well as on our implication in the natural world." —The New York Times "A wry, informed pastoral." —The New Yorker The book that helped make Michael Pollan, the New York Times bestselling author of *How to Change Your Mind*, *Cooked* and *The Omnivore's Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers' genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a

similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind’s most basic yearnings. And just as we’ve benefited from these plants, we have also done well by them. So who is really domesticating whom?

Scientific Meliorism and the Evolution of Happiness Jane Hume Clapperton, 1885
