

The World Atlas Of Language Structures

A Loxley

The World Atlas of Language Structures Martin Haspelmath, 2005-07-21 The World Atlas of Language Structures is a book and CD combination displaying the structural properties of the world's languages. 142 world maps and numerous regional maps - all in colour - display the geographical distribution of features of pronunciation and grammar, such as number of vowels, tone systems, gender, plurals, tense, word order, and body part terminology. Each world map shows an average of 400 languages and is accompanied by a fully referenced description of the structural feature in question. The CD provides an interactive electronic version of the database which allows the reader to zoom in on or customize the maps, to display bibliographical sources, and to establish correlations between features. The book and the CD together provide an indispensable source of information for linguists and others seeking to understand human languages. The Atlas will be especially valuable for linguistic typologists, grammatical theorists, historical and comparative linguists, and for those studying a region such as Africa, Southeast Asia, North America, Australia, and Europe. It will also interest anthropologists and geographers. More than fifty authors from many different countries have collaborated to produce a work that sets new standards in comparative linguistics. No institution involved in language research can afford to be without it.

The World Atlas of Language Structures Online, 2008 A large database of structural (phonological, grammatical, lexical) properties of languages gathered from descriptive materials (such as reference grammars) by a team of more than 40 authors. Includes 141 maps with accompanying texts on diverse features (such as vowel inventory size, noun-genitive order, passive constructions, and hand/arm polysemy). Each map shows between 120 and 1370 languages, each language being represented by a symbol, and different symbols showing different values of the feature. Altogether 2,650 languages are shown on the maps

World Atlas Of Language Structures Dryer, Haspelmath, 2013 De atlas is online beschikbaar en laat door middel van overzichtelijke kaarten zien hoe taalstructuren wereldwijd gerealiseerd worden: welke talen hebben bijvoorbeeld wel of geen lidwoorden, in welke talen is de woordvolgorde anders dan in het Nederlands, hoe wordt in verschillende talen meervoud uitgedrukt, in welke talen komt het bijvoeglijknaamwoord voor het zelfstandig naamwoord en in welke en hoe is het kleurenspectrum in verschillende talen opgedeeld? Een bron aan informatie voor wie snel wil weten hoe het komt dat

bepaalde NT2-leerders steeds dezelfde fouten maken, vanuit interferentie van de moedertaal.

Symmetrical Voice and Linking in Western Austronesian Languages Sonja Riesberg, 2014 This book is an in-depth study of the voice systems of Totoli, Balinese, Indonesian, and Tagalog, which shows that the symmetrical nature of these systems poses a problem to current linking theories. It provides an analysis of symmetrical linking within two grammatical theories (LFG & RRG) and develops a modified LFG linking mechanism that sheds light on the differences as well as the similarities of symmetrical and asymmetrical voice systems.

Language and Linguistics Cynthia R. Dreyer, 2009 A language is a dynamic set of visual, auditory, or tactile symbols of communication and the elements used to manipulate them. Language can also refer to the use of such systems as a general phenomenon. Language is considered to be an exclusively human mode of communication; although animals make use of quite sophisticated communicative systems, none of these are known to make use of all of the properties that linguists use to define language. This book presents important research in the field from around the globe.

General problems are studied from the perspective of individual languages, language families, language groups, or language samples. Conclusions are the result of a deepened study of empirical data. Special emphasis is given to little-known languages, whose analysis may shed new light on long-standing problems in general linguistics.
