A History of Competitive Gaming Lu Zhouxiang, 2022-05-12 Competitive gaming, or esports - referring to competitive tournaments of video games among both casual gamers and professional players - began in the early 1970s with small competitions like the one held at Stanford University in October 1972, where some 20 researchers and students attended. By 2022, the estimated revenue of the global esports industry is in excess of \$947 million, with over 200 million viewers worldwide. Regardless of views held about competitive gaming, esports have become a modern economic and cultural phenomenon. This book studies the full history of competitive gaming from the 1970s to the 2010s against the background of the arrival of the electronic and computer age. It investigates how competitive gaming has grown into a new form of entertainment, a sport-like competition, a lucrative business and a unique cultural sensation. It also explores the role of competitive gaming in the development of the video game industry, making a distinctive contribution to our knowledge and understanding of the history of video games. A History of Competitive Gaming will appeal to all those interested in the business and culture of gaming, as well as those studying modern technological culture.

Ambient Intelligence Giuseppe Riva, 2005 The metaphor of Ambient Intelligence (AmI) tries to picture a vision of the future where all of us will be surrounded by 'intelligent' electronic environments, and this ambient has claims to being sensitive and responsive to our needs. Ambient Intelligence without invasion of privacy represents a long-term vision for the EU Information Society Technologies Research programme. A strong multi-disciplinary and collaborative approach is a key

requirement for large-scale technology innovation and the development of effective applications. Up to now, most of the books and papers related to AmI focus their analysis on the technology potential only. An important feature of this volume is the link between the technology - through the concepts of ubiquitous computing and intelligent interface - and the human experience of interacting in the world - through a neuro-psychological vision centred on the concept of 'presence'. Presence - the sense of being there - is the experience of projecting one's mind through media to other places, people and designed environments. The combination of recent discoveries in cognitive neuroscience - which make it possible to acquire a better understanding of the human aspects of presence, and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding. The goal of this volume is to assess the technologies and processes that are behind the AmI vision, in order to help the development of state-of-the-art applications. More in detail, this volume aims at supporting researchers and scientists, interested in the understanding and exploiting the potential of AmI.

Game Design Workshop Tracy Fullerton,Chris Swain,Steven Hoffman,2004-01-03 As experienced teachers of novice game designers, the authors have discovered patterns in the way that students grasp game design - the mistakes they make as well as the methods to help them to create better games. Each exercise requires no background in programming or artwork, releasing beginning designers from the intricacies of electronic game production and allowing them to learn what works and what doesn't work in a game system. Additionally, these exercises teach important skills in system design: the processes of prototyping, playtesting, and redesigning.

Transnational Infrastructures and the Transformation of Global Orders Hans-Jürgen Bieling, Thomas Diez, Riccarda Flemmer, Andrea Futterer, 2025-05-22 This book offers a multidisciplinary insight into the significance of infrastructural change for global orders. While infrastructures form the material basis of our everyday lives and their design and use determine the further development of our societies, infrastructures themselves often remain invisible in everyday life. Although they are and have always been subject to political conflicts their contestation often only becomes visible when the circulation of data, goods and people is disrupted. Rarely has this been more evident than at the moment, when we are experiencing a multitude of overlapping global crises. The threat of the nearing climate catastrophe shows us the inadequacies and climatic impacts of our energy and transport systems. The Russian war of aggression in Ukraine and the subsequent energy crisis underline how dependent we are on infrastructures and how their political instrumentalization contributes to the escalation of conflicts. The COVID-19 pandemic has further exposed the vulnerability not only of national infrastructures but also of global supply chains. These crises illustrate twofold: first they show that transnational infrastructures are no longer only deepening ties between individuals, societies, and states. This was for long the hope of transnational actors. Infrastructures may still stabilize global orders, but they also foster their reconfiguration, facilitating the establishment and rise of certain political actors and the decline of others. Second, these crises force us to ask about the significance of transformed infrastructures for global orders; how this transformation manifested itself historically and how it is shaping the present and future alike. What can a comprehensive understanding of the impact of infrastructures on global orders contribute to the challenges of the 21st century? With this anthology we approach this question from different perspectives. The book deals with infrastructures in different fields – from energy to transport, from communication to migration – and at different levels of society – local, regional, global. What unites all the contributions is an interest in showing what the respective dynamics within and among these fields as well as the driving forces behind these developments mean for our society. This book is aimed at a wide audience from infrastructure researchers to IR experts as well as from colleagues with expertise in specific policy fields to the general reader interested in the effects often invisible transnational infrastructures have on the organization of their everyday life.
