Non-Motorized Transport Integration into Urban Transport Planning in Africa Winnie V. Mitullah, Marianne Vanderschuren, Melekidzedek Khayesi, 2017-07-14 What challenges do pedestrians and cyclists face in cities of the developing world? What opportunities do these cities have to provide for walking and cycling? Based on in-depth research conducted in Cape Town (South Africa), Dar es Salaam (Tanzania) and Nairobi (Kenya), this book explores these questions by presenting work on walking and cycling travel behaviour, the status of road safety in these cities, as well as an analysis of the infrastructure for walking and cycling, and the workings of the institutions responsible for planning for these modes. The book also presents case studies relating to particular opportunities and challenges, such as the development and evaluation of 'walking bus' interventions, and the opportunities micro-simulation of pedestrian interventions offers within a data-scarce environment. *Non-motorized Transport Integration into Urban Transport Planning in Africa* demonstrates that transport and urban planning remains situated in a logic of automobile-dependent transport planning and global city development. This logic of practice does not pay adequate attention to walking and cycling. It argues that a significant shift in both policy as well as political commitment is needed so as to prioritize walking and cycling as strategies for sustainable transport policy in urban Africa. This book will be a key text for practitioners and policy makers working in planning, transport policy and urban development in Africa, as well as students and scholars of African studies, development studies, urban geography, transport studies and sustainable development.

Sustainable Transportation for All Ryan Turner-Brady, 2022 As modern urban planners look towards sustainable solutions to combat the effects of climate change, one sector of particular interest has been transportation. Sustainable Transportation seeks to shift away from the automobile dependent habits of the past century, towards transportation options that mitigate the effects of climate change, enhance mobility, and promote equity. One of the key aspects of Sustainable Transportation, Non-Motorized Transport (NMT), has been of particular interest to many cities and planners as of late. This paper provides a comprehensive overview of Non-Motorized Transport, the benefits, challenges, and opportunities of this form of Sustainable Transportation. Three groups of policy strategies for planners to utilize to encourage Non-Motorized Transport are identified. Land use changes encompass long-range transformations to the built environment to increase walkability and cyclability. Infrastructure improvements include various facilities for pedestrians and cyclists to navigate safely and efficiently, and

regulatory measures provide legal incentives for non-motorized travel and disincentives to automobile use. Examples of Washington D.C. and Paris, France are articulated for their utilization of these strategies to promote Non-Motorized Transport in their respective contexts. Lastly, the analysis is used to speculate possible recommendations for the city of Seattle, and how planners might encourage more non-motorized means of transportation within the city.

Non-motorized Vehicles in Asian Cities Michael A. Replogle, 1992 This paper provides an overview of the current use of non-motorized vehicles (NMVs) in Asian cities, environmental and economic aspects of NMVs in Asian cities, the characteristics of NMVs and facilities that serve them, and policies that influence their use. The paper identifies conditions under which NMVs should be encouraged for urban transport, obstacles to the development of NMVs, and makes recommendations for action by the World Bank and other donors.

Evaluating Non-motorized Transportation Benefits and Costs Todd Litman, 2011 This report describes methods for evaluating non-motorized transport (walking, cycling, and their variants) benefits and costs, including direct benefits to users from improved walking and cycling conditions, and various benefits to society from increased non-motorized travel activity, reduced automobile travel, and support for more compact land use development. It identifies various types of benefits and costs, and describes methods for measuring them. It discusses non-motorized transport demand and ways to increase non-motorized travel activity. This analysis indicates that non-motorized travel provides significant benefits, many of which are overlooked or undervalued in conventional transport economic evaluation.
