**Starlight Starbright: Are Stars Conscious? Second Edition** Greg Matloff, C Bangs, 2020-05-07 The only thing we can be absolutely sure of is our own consciousness. But what is consciousness? Is it a property that is unique to humans or do we share it with other lifeforms? Or is the philosophical doctrine of panpsychism correct—are stars and the entire universe conscious in some sense? Early chapters in this book examine the prehistory, mythology, and history of this topic. Arguments are presented from the viewpoints of shamans, philosophers, poets, quantum physicists, and novelists. A simple “toy” model of panpsychism is then presented, in which a universal field of proto-consciousness interacts with molecular bonds via the vacuum fluctuation pressure of the Casimir Effect. It is shown how this model is in congruence with an anomaly in stellar motions called “Parengo’s Discontinuity.” Cool, redder, less massive stars such as the Sun apparently circle the center of the galaxy faster than their hotter, bluer, more massive sisters. This discontinuity occurs at the point in the stellar distribution where molecules begin to appear in stellar spectra. As described in the first edition of this book, observations of main sequence stars out to ~260 light years and giant stars out to >1,000 light years—using the ESA Hipparcos space observatory—support the reality and non-locality of Parengo’s Discontinuity. Local, more conventional explanations for this phenomenon are not supported by observations of other galaxies and the spiral arms of the Milky Way. Since 2014, the new ESA Gaia space observatory has been obtaining kinematics and position data for ~1 billion stars in our galaxy. The first Gaia data release in 2016 has been used in 2018 by a Russian team to demonstrate Parengo’s Discontinuity for a large stellar sample out to ~500 light years from the Sun. These observations support the hypothesis that anomalous stellar motion is due to stellar volition, as described by philosopher/author Olaf Stapledon in his classic novel *Star Maker*, as previously discussed by the author in the peer-reviewed *Journal of the British Interplanetary Society (JBIS)*. In light of the new Gaia observations and work by other researchers, it is not impossible that panpsychism is emerging from the realm of philosophy as a new subdivision of observational astronomy. Simple models of universal proto-consciousness may be subject to inductive tests using current and future space observatories. A special feature of this book is the chapter frontispiece art by C Bangs.

**The Triad of Truth: Exploring the Intersections of Religion, Philosophy, and Science** Haribhai Naranbhai Jadav, 2025-08-07 Man has lived divided for too long—science in one hand, religion in the other, and philosophy wandering in between, trying to make sense of both. But truth is not fragmented; existence is not divided into departments. Science,

philosophy, and religion are not enemies—they are three dimensions of the same quest. Science is the language of the measurable. It asks, How does this universe function? It seeks precision, clarity, the mechanisms of existence. Philosophy is the longing to know the deeper meaning. It asks, Why is there something rather than nothing? It questions, it wonders, it seeks the hidden poetry of the cosmos. Religion is the heartbeat of devotion. It does not ask, it trusts. It feels the presence of something beyond logic, beyond intellect. It is not about proving—it is about experiencing. To see them as separate is to remain blind. The truth is one, but the seekers are many.

*Chemistry in Your Kitchen* Matthew Hartings, 2020-08-28 Whether you know it or not, you become a chemist any time you step into a kitchen. As you cook, you oversee intricate chemical transformations that would test even the most hardened of professional chemists. Focussing on how and why we cook different dishes the way we do, this book introduces basic chemistry through everyday foods and meal preparations. Through its unique meal-by-meal organisation, the book playfully explores the chemistry that turns our food into meals. Topics covered range from roasting coffee beans to scrambling eggs and gluten development in breads. The book features many experiments that you can try in your own kitchen, such as exploring the melting properties of cheese, retaining flavour when cooking and pairing wines with foods. Through molecular chemistry, biology, neuroscience, physics and agriculture, the author discusses various aspects of cooking and food preparation. This is a fascinating read for anyone interested in the science behind cooking.

**Quotes by Carl Sagan** Lilith Regan, 2020-03-10 Somewhere, something incredible is waiting to be known. We're made of star stuff. We are a way for the cosmos to know itself. For small creatures such as we the vastness is bearable only through love. If you want to make an apple pie from scratch, you must first create the universe. Imagination will often carry us to worlds that never were. But without it we go nowhere. Science is not only compatible with spirituality; it is a profound source of spirituality. For me, it is far better to grasp the Universe as it really is than to persist in delusion, however satisfying and reassuring. Absence of evidence is not evidence of absence. We are like butterflies who flutter for a day and think it is forever. Every one of us is, in the cosmic perspective, precious. If a human disagrees with you, let him live. In a hundred billion galaxies, you will not find another.

*Carl Sagan Bite Size Wisdom*, 2020-11-18 The cosmic calendar compresses the local history of the universe into a single year. If the universe began on January 1st it was not until May that the Milky Way formed. Other planetary systems may have appeared in June, July and August, but our Sun and Earth not until mid-September. Life arose soon after. We humans appear on the cosmic calendar so recently that our recorded history occupies only the last few seconds of the last minute of December 31st. ~ Carl Sagan Essential CARL SAGAN Quotes Now at Your Fingertips! This little book of quotes by Carl Sagan covers all his profound quotes on science, cosmos, culture, wisdom Makes for a unique gift to those who appreciate profound thoughts and ideas Highly quotable lines you can use (or take inspiration) for your own writing The total number of

stars in the Universe is larger than all the grains of sand on all the beaches of the planet Earth. We live on a hunk of rock and metal that circles a humdrum star that is one of 400 billion other stars that make up the Milky Way Galaxy which is one of billions of other galaxies which make up a universe which may be one of a very large number, perhaps an infinite number, of other universes. That is a perspective on human life and our culture that is well worth pondering. For small creatures such as we the vastness is bearable only through love.

*The Frugal Economy* Navi Radjou, 2024-10-01 Humanity's pursuit of greatness meets the reality of finite resources In *The Frugal Economy: A Guide to Building a Better World With Less*, award-winning author Navi Radjou delivers an incisive and engrossing treatment of how human beings facing climate change can reconcile our built-in drive to “do more” and “be better” with our planet's finite resources. **Lovesick** Trisha Wolfe, 2026-07-07 An exploration into the depths of obsession, revenge, and the heart—traversing the darkest regions of the universe and mind, where memory lives beyond death, and love is the most dangerous force of all. “To even comprehend it, you have to abandon the comfort of known physics. You have to reach into the unknown, into the void itself, and hope some semblance of humanity survives.” — Orion Night In astrophysics, anything dark is simply unknown. When you become obsessed with the relentless pursuit of such all-consuming forces, you become something of what you cannot explain. Hidden. Unknown. Warped. The darkness behind stars. Until she entered Stonehurst University, I had no idea how close I was to the edge—always one reckless heartbeat away from stepping off the cliff. To quiet the intrusive chaos in my head, I need the danger, the rush. Now I need her. Nothing has ever felt more dangerous. Especially when my fire sign is

keeping her own deadly secrets on this misty, academic harbor. Yet with one forbidden touch, my willpower to fight this force goes up in flames. It's fucking written in the stars. From the moment Collins Holbrook entered my orbit, there was one thing I understood unequivocally: She was mine. And I won't let anything—not even the dark tide rising within me—eclipse her light.

Impact Greg Brenneka, 2022-02-01 A Short History of Nearly Everything meets Astrophysics for People in a Hurry in this humorous, accessible exploration of how meteorites have helped not only build our planet but steered the evolution of life and human culture. The Solar System. Dinosaurs. Donkey Kong. What is the missing link? Surprisingly enough, it's meteorites. They explain our past, constructed our present, and could define our future. Impact argues that Earth would be a lifeless, inhospitable piece of rock without being fortuitously assaulted with meteorites throughout the history of the planet. These bombardments transformed Earth's early atmosphere and delivered the complex organic molecules that allowed life to develop on our planet. While meteorites have provided the raw materials for life to thrive, they have radically devastated life as well, most famously killing off the dinosaurs and paving the way for humans to evolve to where we are today. As noted meteoriticist Greg Brenneka explains, meteorites did not just set us on the path to becoming human, they helped direct the development of human culture. Meteorites have influenced humanity since the start of civilization. Over the centuries, meteorite falls and other cosmic cinema have started (and stopped) wars, terrified millions, and inspired religions throughout the world. With humor and an infectious enthusiasm, Brenneka reveals previously untold but important stories sure to delight and inform readers about the most important rocks on Earth.

**Genesis, Creation, and Creationism** Lloyd R. Bailey, 1993 Creationism is an ardently proclaimed and widely held point of view, involving both scientific and biblical data. While much has been written about 'scientific' creationism, much less is available about its counterpoint, 'biblical' creationism. This book provides this much-needed evaluation of creationism by uniquely allowing the Bible to speak for itself. 'Genesis, Creation and Creationism' is a thought-provoking study on the relationship of science and religion that speaks to all Christian denominations. It provides excellent resource material for high school science classes, religion classes, and for seminarians engaged in biblical studies.

**Billions & Billions** Carl Sagan, 2011-07-06 NEW YORK TIMES BESTSELLER • In the final book of his astonishing career, Carl Sagan brilliantly examines the burning questions of our lives, our world, and the universe around us. These luminous, entertaining essays travel both the vastness of the cosmos and the intimacy of the human mind, posing such fascinating questions as how did the universe originate and how will it end, and how can we meld science and compassion to meet the challenges of the coming century? Here, too, is a rare, private glimpse of Sagan's thoughts about love, death, and God as he struggled with fatal disease. Ever forward-looking and vibrant with the sparkle of his unquenchable curiosity, Billions & Billions is a testament to one of the great scientific minds of our day. Praise for Billions & Billions "[Sagan's]

writing brims with optimism, clarity and compassion.”—Ft. Lauderdale Sun-Sentinel “Sagan used the spotlight of his fame to illuminate the abyss into which stupidity, greed, and the lust for power may yet dump us. All of those interests and causes are handsomely represented in Billions & Billions.”—The Washington Post Book World “Astronomer Carl Sagan didn’t live to see the millennium, but he probably has done more than any other popular scientist to prepare us for its arrival.”—Atlanta Journal & Constitution “Billions & Billions can be interpreted as the Silent Spring for the current generation. . . . Human history includes a number of leaders with great minds who gave us theories about our universe and origins that ran contrary to religious dogma. Galileo determined that the Earth revolved around the Sun, not the other way around. Darwin challenged Creationism with his Evolution of Species. And now, Sagan has given the world its latest challenge: Billions & Billions.”—San Antonio Express-News “[Sagan’s] inspiration and boundless curiosity live on in the gift of his work.”—Seattle Times & Post-Intelligencer “Couldn’t stay awake in your high school science classes? This book can help fill in the holes. Acclaimed scientist Carl Sagan combines his logic and knowledge with wit and humor to make a potentially dry subject enjoyable to read.”—The Dallas Morning News
