Force and Motion Jason Zimba,2009-06-01 Isaac Newton developed three laws of motion that govern the everyday world. These laws are usually presented in purely mathematical forms, but Jason Zimba breaks with tradition and treats them visually. This unique approach allows students to appreciate the conceptual underpinnings of each law before moving on to qualitative descriptions of motion and, finally, to the equations and their solutions. Zimba has organized the book into seventeen brief and well-sequenced lessons, which focus on simple, manageable topics and delve into areas that often cause students to stumble. Each lesson is followed by a set of original problems that have been student-tested and refined over twenty years. Zimba illustrates the laws with more than 350 diagrams, an innovative presentation that offers a fresh way to teach the fundamentals in introductory physics, mechanics, and kinematics courses.

Force and Motion Lisa A. Boehm,2007-11-01 Gravity and friction are forces that affect the motion of all objects. Isaac Newton developed three laws to describe motion. The first law states that a net force is needed to change the velocity of an object. The second law explains how acceleration, mass, and force are related. The third law states that forces occur in an action-reaction pair.
