Long COVID: Pathogenesis, Diagnosis and Clinical Management Michel Goldman, Arch Mainous, Shisan Bao, 2025-05-29

Three years have passed since Coronavirus disease 2019 (COVID-19) has rapidly spread worldwide, its clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and fatalities. In May 2023, the World Health Organization declared that COVID-19 is no longer a Public Health Emergency of International Concern (PHEIC), however emphasises that “it continues to take a significant toll on health globally. With the pandemic now in its fourth year, it is clear the virus is likely to stay with us for many years to come – if not forever.” While the pandemic phase of COVID-19 has since been under a degree of control with vaccines, public health measures and surveillance, the long-lasting effects of infection are yet to be fully-understood. The medical community now has a new battle to confront: long COVID, also known as Post COVID Condition (PCC) or Post Acute Sequelae of COVID-19. The WHO defines long COVID as Post COVID-19 Condition, commonly known as long COVID, is the continuation or development of new symptoms 3 months after the initial SARS-CoV-2 infection, with these symptoms lasting for at least 2 months with no other explanation. These effects can last weeks, months or years, rendering what was once an acute respiratory disease into an essentially chronic condition with a wide range of symptoms. According to Professor Michel Goldman (Field Chief Editor of Frontiers in Medicine) the immediate effects of Long Covid need urgent attention: “The impact of long COVID-19 on public health is expected to be huge since more than half of COVID-19 survivors develop post-acute sequelae according to systematic review studies (3–6). The real burden of long Covid is however not established due to the elusive definition of the condition (7) and the emergence of the Omicron variants. Although the risk of developing long Covid after infection with an Omicron variant has been found to be reduced by half as compared to previous strains, the absolute numbers will clearly remain high (8). It is therefore important to rapidly address the several challenges related to long Covid.” (Goldman, Long COVID, a great imitator of the 21st century, Frontiers in Medicine 2022 <https://www.frontiersin.org/articles/10.3389/fmed.2022.1026425/full>) There is an ever-shortening window of opportunity to better understand the clinical diagnosis, treatment and therapeutic support of those people suffering from the debilitating disease known as Long Covid. Long Covid could therefore become one of the great medical challenges of our time and an appropriately curated resource for clinicians, healthcare workers and the general public is critical. This Research Topic aims to highlight medical research approaches in the pathogenesis, diagnosis and clinical management of long COVID. It aims to

address knowledge gaps and generate evidence for its improved management and control. It will incorporate critical, theoretically informed and empirically grounded original research contributions using diverse approaches, experimental, observational and intervention studies, conceptual framing, expert opinions and reviews from across the world. The Research Topic proposes a multi-dimensional approach to improving the management of long COVID with scientific contributions from all areas of medicine. Submissions are welcome for the following article types: original research, review, mini-reviews, systematic reviews, research protocol, opinion and hypothesis. We particularly welcome contributions that include, but are not limited to, the following topics: Long COVID in the Omicron era Therapeutic approaches of long COVID Pathogenesis of long COVID Biomarkers of long COVID

The Invisible Machine Eugene Lipov, MD,Jamie Mustard,2023-04-11 PenCraft Book Awards 2023 Non-Fiction Runner Up The world has long misunderstood trauma. Now, leading experts in the field have a radical new understanding of post-traumatic stress . . . and a surprising new treatment to reverse it could have profound implications for medicine, mental health, and society. Despite its prevalence, post-traumatic stress, PTSD, is often seen as an unbeatable lifelong mental disorder. However, top trauma doctors and neuroscientists now understand that the result of trauma is not a disorder, but rather a physical injury—and while invisible to the naked eye, the posttraumatic stress injury (PTSI) can now be seen on a scan. Most importantly, the effects of PTSI are reversible. Meet Dr. Eugene Lipov. His research and partnerships have led to an amazing discovery that all trauma has at its root a single piece of human hardware: the sympathetic nervous system, controlling the fight-or-flight response. Anyone who has endured trauma, including long-term microdoses of emotional stress, can have this injury. Dr. Lipov has pioneered a safe, 15-minute procedure that reverses the injury, relieving mild to extreme symptoms of PTSI—irritability, hypervigilance, anxiety, insomnia, and more—for survivors to combat soldiers to the everyday person. Weaving hard science with moving human stories, *The Invisible Machine* reveals how this treatment was developed. It also tells the incredible story of the unlikely team, including the doctor, an artist, Special Forces leadership, and a sheriff, who are working together to change our understanding of post-traumatic stress and why it matters to society. Coauthored by

artist and innovator Jamie Mustard and in collaboration with writer Holly Lorincz, *The Invisible Machine* weaves hard science with moving stories of warriors, prisoners, and ordinary people to provide a stark new understanding of the human condition. The implications for a better, pain-free world are astounding—and that world could be nearer than we think.

Immunobiology of COVID-19, 2024-01-17 This volume provides a comprehensive and in-depth exploration of the SARS-CoV-2 virus and its impact on human health. Written by a team of expert contributors, the book covers various aspects of the virus, including its structure, life cycle, and genomic replication. It delves into the epidemiology of COVID-19, comparing it with other related coronaviruses and discussing the concept of herd immunity. The structural biology of SARS-CoV-2 is examined, with a focus on techniques such as electron microscopy and cryo-electron tomography. The book also explores the biology of SARS-CoV-2 variants and their immune evasion strategies. Furthermore, it delves into the pathogenesis of COVID-19, examining its multiorgan manifestations and the long-term effects of the disease. The innate and adaptive immune responses to SARS-CoV-2 are discussed in detail, along with the role of B cells and T cells in the immune response. The volume concludes with a look at future insights and potential developments in the field. Accompanied by illustrative diagrams and visuals, this volume would aid in grasping complex concepts, serving as a valuable resource for researchers, healthcare professionals, and anyone interested in understanding the intricate details of SARS-CoV-2 and its impact on global health. - Comprehensive coverage of various aspects of the COVID-19 pandemic, including virus structure, variants, immune responses, disease pathogenesis including its multiorgan manifestations and long COVID - Focus on in-depth analysis of innate and adaptive immune responses to SARS-CoV-2, including B cell and T cell responses, discussing the recognition and activation mechanisms, antibody production, immunological memory as well as the role of spike proteins in immunological regulation - Richly illustrated with informative diagrams, providing visual aids to enhance understanding of complex concepts and structures related to COVID-19

Nurse Practitioners and Nurse Anesthetists: The Evolution of the Global Roles Sophia L. Thomas, Jackie S. Rowles, 2023-06-05 As the only book of its kind, this publication provides students, clinicians, researchers, ministries of health, and others with a valuable, thorough, and focused understanding of the development of the nurse practitioner (NP) and nurse anesthetist (NA), two advanced practice nursing roles which have improved access to care and healthcare outcomes as bilateral role development has progressed internationally. As the two roles have significant clinical differences, the book will appraise each role separately within two sections utilizing different approaches. After a thorough platform of defining and describing each role, including history and origins, education, practice, regulation, and leadership, the book guides by example, utilizing unique country case studies divided by WHO regions as exemplars for international role development as well as an outlook for the future of advanced practice nursing on the global stage. The book expands on the tenets and principles as outlined in the ICN Guidelines on Advanced Practice Nursing for Nurse Practitioners (2020) and

Nurse Anesthetists (2021), providing the reader with an internationally vetted and accepted comprehension of the roles, guiding and inspiring future role development to improve global health care.

The Complete Long COVID Handbook: Volume 1 (2nd Edition) Robert Groysman, 2024-11-08 This book, the first in a comprehensive series examining the causes and treatments of Long COVID, is the culmination of over a year of dedicated work. It brings together the insights and expertise of Dr. Robert Groysman, MD, a leading authority in the field. Dr. Groysman has been at the forefront of treating Long COVID since the pandemic began, and his deep understanding of this condition is invaluable to anyone seeking to navigate its complexities. Written for both patients and doctors, this book offers an in-depth exploration of Long COVID, breaking down the condition into understandable segments. You will gain knowledge of the risk factors, the underlying causes, and the various treatment options available. Importantly, this book is not just about theory; it's about practical, actionable strategies that can be implemented in real-life scenarios. As you embark on this journey through the pages of this book, you will discover not only the science behind Long COVID but also the personal insights that come from years of hands-on experience. My goal is to help you understand what is happening inside your body, why you feel the way you do, and to validate that your symptoms are real and not merely in your head. Long COVID is a genuine medical condition, and this book aims to shed light on its many facets. While treatment options are discussed in detail, I have deliberately refrained from prescribing specific dosages or one-size-fits-all solutions. Treatment is highly individual, and what works for one person may not work for another. This book is meant to serve as a guide, offering a clear strategy that you can discuss with your healthcare provider to tailor the best approach for your unique situation. Natural treatments, though often beneficial, can be harmful if not used correctly, and it is essential to make informed decisions in collaboration with your provider.

Smell and Taste Disorders in Long COVID-19 Aljaž Prijon, 2023

On the Scent Paola Totaro, Robert Wainright, 2022-09-13 Your sense of smell is a fundamental part of life as most of us know it. So what happens when it disappears? When Paola Totaro lost her sense of smell to Covid in March 2020, she found herself trapped in a sensory vacuum. In a quest for answers, she embarked on a journey of discovery to unravel the mysteries -and eccentricities - of the fifth sense. From the theories of ancient philosophers to the cutting-edge laboratories of 21st-century neuroscience, *On the Scent* explores the mysteries of our 'Cinderella' sense. It offers a unique glimpse into the world of those born without smell as well as those who lose it; exploring how smell can be a key indicator of declining physical health; and offering up the latest research that can offer hope to the millions of people worldwide who have suffered sensory loss. Enthralling, moving, and elegantly written. -Peter Godfrey-Smith, author of *Other Minds* An engaging read . . . packed with insights and observations that bring this topic to life for everyone. -Professor Barry Smith, Centre for the Study of the Senses Destined to be a bible for anyone who has lost their sense of smell. -Chrissi Kelly, AbScent This book will profoundly

change the way you think about your ability to smell and how its loss affects our lives. -Fiona Fox, Director of the Science and Media Centre and author of Beyond the Hype
