Handbook Of Clinical And Experimental Neuropsychology Gianfranco Denes, Luigi Pizzamiglio, 2020-03-06 The domain of neuroscience has had one of the most explosive growths in recent decades: within this development there has been a remarkable and renewed interest in the study of the relations between behaviour and the central nervous system. Part of this new attention is connected with the contribution of new technologies (PET, fMRI) permitting more precise mapping of neural structures responsible for cognitive functions and the development of new theoretical models of mental activities. The diffusion of new pathologies (for example the pattern of cognitive impairment associated with AIDS) has further enlarged the field of clinical neuropsychology. Finally there has been an expanding clinical interest in the understanding and management of age-related cognitive changes. This volume is the translated and updated version of the second edition of *Manuale di Neuropsicologia* (Zanichelli, 1996), by the same authors, and it reflects the current status of the art. It is intended to blend clinical and theoretical aspects of neuropsychology. The first part discusses the instrumental and clinical methods of investigation in neuropsychology, together with their development. A long section is dedicated to the language and memory disorders. The impairment of non-verbal cognitive functions, such as the disorders of space orientation, of visuo-perceptive abilities, and of the emotions and attention, are extensively discussed. The pattern of degenerative dementias is thoroughly described, as is thoroughly described, as well as a number of new topics, such as a neuropsychological approach to consciousness. Finally, perspectives for treatment of some cognitive disorders are outlined.

Applied Neuropsychology of Attention Michel Leclercq, Peter Zimmermann, 2004-08-02 This collection of essays forms a comprehensive overview of this crucial component of human cognitive function.

Imagery and Spatial Cognition Tomaso Vecchi, Gabriella Bottini, 2006-08-22 The relationships between perception and imagery, imagery and spatial processes, memory and action: these are the main themes of this text. The interest in experimental psychology and cognitive neuroscience on imagery and spatial cognition has remarkably increased in the last decades. Different areas of research contribute to the clarification of the multiple cognitive processes subserving spatial perception and exploration, and to the definition of the neurophysiological mechanisms underpinning these cognitive functions. The aim of this book is to provide the reader (post-graduate students as well as experts) with a complete overview of this field of research. It illustrates how brain, behaviour and cognition interact in normal and pathological subjects in

perceiving, representing and exploring space.(Series B)

Metalinguistic Awareness: Recomposing Cognitive, Linguistic and Cultural Conflicts Oreste Floquet ,Sergio Melogno,2024-04-16 This volume is dedicated to Maria Antonietta Pinto's research across the past five decades. The title reflects not only the dominance of metalinguistic awareness in Pinto's work but also the pathway through which this construct has been elaborated over the years. Under the influence of two great mentors, Jean Piaget for the cognitive aspects, and Renzo Titone for the psycholinguistic aspects, Pinto created an original construct of metalinguistic awareness and instruments to measure it at different developmental stages. The volume pays tribute, among other aspects, to the heuristic value of this construct and its use in international research.

Neural Nets WIRN Vietri-99 Maria Marinaro,Roberto Tagliaferri,1999-09-30 From its early beginnings in the fifties and sixties, the field of neural networks has been steadily developing to become one of the most interdisciplinary areas of research within computer science. This volume contains a selection of papers from WIRN Vietri-99, the 11th Italian Workshop on Neural Nets. This annual event, sponsored, amongst others, by the IEEE Neural Networks Council and the INNS/SIG Italy, brings together the best of research from all over the world. The papers cover a range of topics within neural networks, including pattern recognition, signal and image processing, mathematical models, neuro-fuzzy models and economics applications.

Operationalized Psychodynamic Diagnostics OPD-2 Matthias von der Tann,2008 OPD-2 is a new edition of the multiaxial diagnostic system for psychodynamically oriented therapists and psychiatrists, now with practical tools and procedures for treatment planning and for measuring change.Operationalized Psychodynamic Diagnosis (OPD) is a form of multiaxial

diagnostic and classification system based on psychodynamic principles, analogous to those based on other principles such as DSM-IV and ICD-10. The OPD is based on five axes: I - experience of illness and prerequisites for treatment, II - interpersonal relations, III - conflict, IV - structure, and V - mental and psychosomatic disorders (in line with Chapter V (F) of the ICD-10). After an initial interview lasting 1-2 hours, the clinician (or researcher) can evaluate the patient's psychodynamics according to these axes and enter them in the checklists and evaluation forms provided. The new version, OPD-2, has been developed from a purely diagnostic system to include a set of tools and procedures for treatment planning and for measuring change, as well as for determining the appropriate main focuses of treatment and developing appropriate treatment strategies.
