

The Architecture Of The Well Tempered Environment

Alexander Tzonis, Bruno Stagno, Liane Lefaivre

The Architecture of the Well-Tempered Environment Reyner Banham, 2013-10-22 The Architecture of the Well-Tempered Environment presents the fundamental aspects of the architecture of the well-tempered environment. This book considers what architects had taken to be the proper use and exploitation of mechanical environmental controls, and shows how this had manifested itself in the design of their buildings. Organized into 12 chapters, this book begins with an overview of the history of the mechanization of environmental management. This text then explains the accumulation of capital goods and equipment needed to produce a moderate level of civilized culture in pre-technological societies, which requires that building materials be treated as if valuable and permanent. Other chapters consider that it is necessary not only to create habitable environments, but to conserve them. This book discusses as well the kind of technology of environment in the 19th century. The final chapter deals with the liberation of architecture from the ballast of structure. This book is a valuable resource for architects.

Architecture of the Well-Tempered Environment Reyner Banham, 1984 Reyner Banham was a pioneer in arguing that technology, human needs, and environmental concerns must be considered an integral part of architecture. No historian before him had so systematically explored the impact of environmental engineering on the design of buildings and on the minds of architects. In this revision of his classic work, Banham has added considerable new material on the use of energy, particularly solar energy, in human environments. Included in the new material are discussions of Indian pueblos and solar architecture, the Centre Pompidou and other high-tech buildings, and the environmental wisdom of many current architectural vernaculars.

Reyner Banham and the Paradoxes of High Tech Todd Gannon, 2017-09-05 Reyner Banham and the Paradoxes of High Tech reassesses one of the most influential voices in twentieth-century architectural history through a detailed examination of Banham's writing on High Tech architecture and its immediate antecedents. Taking as a guide Banham's habit of structuring his writings around dialectical tensions, Todd Gannon sheds new light on Banham's early engagement with the New Brutalism of Alison and Peter Smithson, his measured enthusiasm for the "clip-on" approach developed by Cedric Price and the Archigram group, his advocacy of "well-tempered environments" fostered by integrated mechanical and electrical systems, and his late-career assessments of High Tech practitioners such as Norman Foster, Richard Rogers, and Renzo Piano. Gannon devotes significant attention to Banham's late work, including fresh archival materials related to *Making Architecture: The Paradoxes of High Tech*, the manuscript he left unfinished at his death in 1988. For the first time, readers will have access to Banham's previously unpublished draft introduction to that book.

Archigram Simon Sadler, 2005-06-24 The first book-length critical and historical account of an ultramodern architectural movement of the 1960s that advocated living equipment instead of buildings. In the 1960s, the architects of Britain's Archigram group and Archigram magazine turned away from conventional architecture to propose cities that move and houses worn like suits of clothes. In drawings inspired by pop art and psychedelia, architecture floated away, tethered by wires, gantries, tubes, and trucks. In *Archigram: Architecture without Architecture*, Simon Sadler argues that Archigram's sense of fun takes its place beside the other cultural agitators of the 1960s, originating attitudes and techniques that became standard for architects rethinking social space and building technology. The Archigram style was assembled from the Apollo missions, constructivism, biology, manufacturing, electronics, and popular culture, inspiring an architectural movement—High Tech—and influencing the postmodern and deconstructivist trends of the late twentieth century. Although most Archigram projects were at the limits of possibility and remained unbuilt, the six architects at the center of the movement, Warren Chalk, Peter Cook, Dennis Crompton, David Greene, Ron Herron, and Michael Webb, became a focal point for the architectural avant-garde, because they redefined the purpose of architecture. Countering the habitual building practice of setting walls and spaces in place, Archigram architects wanted to provide the equipment for amplified living, and they welcomed any cultural rearrangements that would ensue. *Archigram: Architecture without Architecture*—the first full-length critical and historical account of the Archigram phenomenon—traces Archigram from its rediscovery of early modernist verve through its courting of students, to its ascent to international notoriety for advocating the disappearance of architecture.

Reyner Banham Revisited Richard J. Williams, 2021-06-10 Reyner Banham (1922–88) was a prolific, iconoclastic critic of modern architecture, cities, and mass culture in Britain and the United States, and his provocative writings are inescapable

in these areas. His 1971 book on Los Angeles was groundbreaking in what it told Californians about their own metropolis, and architects about what cities might be if freed from tradition. Banham's obsession with technology, and his talent for thinking the unthinkable, mean his work still resonates now, more than thirty years after his death. This book explores the full breadth of his career and his legacy, dealing not only with his major books, but a wide range of his journalism and media outputs, as well as the singular character of Banham himself.

Summerson and Hitchcock Frank E. Salmon, 2006 Publisher description

Hygeia* Weatherized Mishayla Thais Greist Schmidt, 2011 In *The Architecture of the Well-Tempered Environment*, Reyner Banham discusses the architect's obsession with creating self-contained environments that are defined by the enclosure that definitively separates the inside from the outside. What would the shift from architecture as singular interior environments to architecture as dynamic environments that change in response to environmental conditions, mean for design? Can architecture be a working system that modifies, conditions, and controls the environment (heat, light, moisture, and color) to act as materials that shape the space?

Studios Before the System Brian R. Jacobson, 2015-09-01 By 1915, Hollywood had become the epicenter of American filmmaking, with studio dream factories structuring its vast production. Filmmakers designed Hollywood studios with a distinct artistic and industrial mission in mind, which in turn influenced the form, content, and business of the films that were made and the impressions of the people who viewed them. The first book to retell the history of film studio architecture, *Studios Before the System* expands the social and cultural footprint of cinema's virtual worlds and their contribution to wider developments in global technology and urban modernism. Focusing on six significant early film corporations in the United States and France—the Edison Manufacturing Company, American Mutoscope and Biograph, American Vitagraph, Georges Méliès's Star Films, Gaumont, and Pathé Frères—as well as smaller producers and film companies, *Studios Before the System* describes how filmmakers first envisioned the space they needed and then sourced modern materials to create novel film worlds. Artificially reproducing the natural environment, film studios helped usher in the world's Second Industrial Revolution and what Lewis Mumford would later call the specific art of the machine. From housing workshops for set, prop, and costume design to dressing rooms and writing departments, studio architecture was always present though rarely visible to the average spectator in the twentieth century, providing the scaffolding under which culture, film aesthetics, and our relation to lived space took shape.

Theories and Manifestoes of Contemporary Architecture Charles Jencks, Karl Kropf, 1997-08-05 This essential

compendium presents more than 150 key arguments by major architectural philosophers and gurus of today and outlines the numerous developments that have taken place in this field since the 1950s. Each of the statements is accompanied by a short biography of the architect and an extract from their principal texts drawn from a variety of sources.

Tropical Architecture Alexander Tzonis,Bruno Stagno,Liane Lefaivre,2001 The tropical region covers a significant proportion of the globe, and yet its architecture receives relatively little outside comment or exposure. Dispersed widely throughout the world, the region incorporates areas as far-flung as the Caribbean islands, India, South-East Asia, and large parts of Australia, Africa and South and Central America. Despite their great cultural diversity, these areas share both climatic and ecological factors, as well as a post-colonial condition and the pressures of modernization in the world of globalization. Architects' reactions to the tropical context are as varied as the region is diverse. Tropical Architecture brings together architects and critics from throughout the tropical region, examining the implications of the opposing forces of tradition and innovation and the struggle between global and local order. Among the issues covered are sustainability, bio-cultural diversity, micro-climatic control and technology and multi-disciplinary design. The argument centres on Critical Regionalism, a concept introduced into the architectural debate in the early 1980s by two of the book's co-authors, Tzonis and Lefaivre. This is not a style but rather an approach to architecture that asks for design to be conceived in response to the needs and opportunities of a specific region - although it is not inherently opposed to global potentials. The theoretical debate is backed up by case studies of a range of projects, from small-scale designs using minimal technology to super-sophisticated, high-tech solutions, and from schemes that look to environmental comfort to ones concerned with issues of symbolism and memory. It is out of this multiplicity of approaches that the general global lesson of Critical Regionalism as applied to tropical architecture is to be found. THE PRINCE CLAUS FUND stimulates and supports activities in the field of culture and development by granting awards, funding and producing publications and by financing and promoting networks and innovative cultural activities. Support is given both to persons and to organizations in African, Asian, Latin American and Caribbean countries.
