Cells, Tissue, and Skin, Third Edition Donna Bozzone,Douglas Light,2021-08-01 Cells are the smallest units capable of sustaining life, and they make up virtually every aspect of the human body. From the strands of hair at the top of the head to the nails on fingers and toes, every structure of the human body is composed of cells. Groups of cells form tissues and organs, which allow the body to function as an organized system. Skin, the body's largest organ, forms a waterproof barrier that provides protection against invading microorganisms and acts as a sensory and thermoregulatory structure. Cells, Tissues, and Skin, Third Edition explores the properties of each of these components in our bodies. Packed with full-color photographs and illustrations, this absorbing book provides students with sufficient background information through references, websites, and a bibliography.

Essential Cell Biology Bruce Alberts,2018-11 Cell biology is taught in classrooms around the world to provide students with a firm conceptual grounding in biology. Cells and Human Health, Third Edition Michael Newman, 2021-12-01 The amazing complexity of human anatomy and physiology is dependent upon its single most basic unit: the cell. Humans can attribute their overall health to homeostasis, the balance of activity within properly functioning cells. Additionally, cells are affected by the food we eat along with the microscopic entities that make us ill. Cells and Human Health, Third Edition covers how cells work to maintain human health and immunity as well as the history of cell discovery and the basics of cellular activity. Readers will also learn the processes of illnesses and corresponding genetics that compromise a cell's proper activity in the human being.

The Song of the Cell Siddhartha Mukherjee, 2022-10-25 Winner of the 2023 PROSE Award for Excellence in Biological and Life Sciences and the 2023 Chautauqua Prize! Named a New York Times Notable Book and a Best Book of the Year by The Economist, Oprah Daily, BookPage, Book Riot, the New York Public Library, and more! In The Song of the Cell, the extraordinary author of the Pulitzer Prize-winning The Emperor of All Maladies and the #1 New York Times bestseller The Gene “blends cutting-edge research, impeccable scholarship, intrepid reporting, and gorgeous prose into an encyclopedic study that reads like a literary page-turner” (Oprah Daily). Mukherjee begins this magnificent story in the late 1600s, when a distinguished English polymath, Robert Hooke, and an eccentric Dutch cloth-merchant, Antonie van Leeuwenhoek looked down their handmade microscopes. What they saw introduced a radical concept that swept through biology and medicine, touching virtually every aspect of the two sciences, and altering both forever. It was the fact that complex living organisms are assemblages of tiny, self-contained, self-regulating units. Our organs, our physiology, our selves—hearts, blood, brains—are built from these compartments. Hooke christened them “cells.” The discovery of cells—and the reframing of the

human body as a cellular ecosystem—announced the birth of a new kind of medicine based on the therapeutic manipulations of cells. A hip fracture, a cardiac arrest, Alzheimer’s dementia, AIDS, pneumonia, lung cancer, kidney failure, arthritis, COVID pneumonia—all could be reconceived as the results of cells, or systems of cells, functioning abnormally. And all could be perceived as loci of cellular therapies. Filled with writing so vivid, lucid, and suspenseful that complex science becomes thrilling, *The Song of the Cell* tells the story of how scientists discovered cells, began to understand them, and are now using that knowledge to create new humans. Told in six parts, and laced with Mukherjee’s own experience as a researcher, a doctor, and a prolific reader, *The Song of the Cell* is both panoramic and intimate—a masterpiece on what it means to be human. “In an account both lyrical and capacious, Mukherjee takes us through an evolution of human understanding: from the seventeenth-century discovery that humans are made up of cells to our cutting-edge technologies for manipulating and deploying cells for therapeutic purposes” (The New Yorker).
