Paleontological Collections of Germany, Austria and Switzerland Lothar A. Beck, Ulrich Joger, 2018-11-19 This book is devoted to 250 years of collecting, organizing and preserving paleontological specimens by generations of scientists. Paleontological collections are a huge resource for modern research and should be available for national and international scientists and institutions, as well as prospective public and private customers. These collections are an important part of the scientific enterprise, supporting research, public education, and the documentation of past biodiversity. Much of what we are beginning to understand about our world, we owe to the collection, preservation, and ongoing study of natural specimens. Properly preserved collections of fossil marine or terrestrial plants and animals are archives of Earth's history and vital to our ability to learn about our place in its future. The approach employed by the editors involves not only an introduction to the paleontological collections in general, but also information on the international and national collection networks. Particular attention is given to new exhibition concepts and approaches of sorting, preserving and researching in paleontological collections and also their neglect and/or threat. In addition, the book provides information on all big public museums, on important state museums and regional Museums, and also on university collections. This is a highly informative and carefully presented book, providing scientific insight for readers with an interest in fossil record, biodiversity, taxonomy, or evolution, as well as natural history collections at large.

Paleoneurology of Amniotes María Teresa Dozo, Ariana Paulina-Carabajal, Thomas E. Macrini, Stig Walsh, 2022-11-22 This book presents a detailed examination of the current state of knowledge in the field of paleoneurology in the main amniote groups (reptiles, birds and mammals), and advances resulting from new non-invasive technologies. The study of fossil endocasts is an area of considerable current interest, and has long been central to our understanding of the evolution of the brain, development of senses and behavioral adaptations in diverse vertebrate groups and across vertebrates as a whole. Recent advances in non-invasive imaging have significantly increased the number of fossil taxa for which brain morphology is known, and it may now be possible to quantitatively analyze the relative size of brain regions. Providing a general overview of current perspectives and problems in evolutionary neuroanatomy, this book is intended for a wide range of readers, including undergraduate and graduate students, teachers, and anyone with a special interest in paleoneurology. It is also useful as

supplementary reading for courses in digital anatomy, vertebrate comparative anatomy, computed morphometrics, paleontology, neurology and radiology as well as evolution programs

Origin and Early Evolution of Amniotes Jörg Fröbisch, Mark Joseph MacDougall, Michel Laurin, Sean P. Modesto, Robert R. Reisz, 2025-09-08 Amniotes comprise all fully terrestrial vertebrates and include extant squamates, turtles, crocodiles, birds and mammals. The origin of amniotes, tightly linked to the amniotic egg as a key innovation, represents a major transition in the evolutionary history of tetrapods. Amniotes first appeared in the fossil record about 318 million years ago and their early evolution, diversification, ecology and phylogenetic relationships have received considerable and increasing interest and research attention over the past decades. Recently, several new hypotheses regarding early amniote interrelationships have been proposed, and it is now apparent that the origin and early evolution of Amniota is not as clear as was previously thought. In order to better understand early amniote evolution and test existing hypotheses, it is critical to continue expanding upon past work with the addition of new data and application of modern technologies and approaches.

Tuebingosaurus Ernst Probst, 2024-10 1921 und 1922 wurden bei einer Grabung im württembergischen Trossingen insgesamt 14 Skelett-Teile von Dinosauriern aus der Obertrias vor etwa 211 bis 203 Millionen Jahren entdeckt. Der Ausgräber, Professor Friedrich von Huene aus Tübingen, schrieb diese Funde der Gattung Plateosaurus zu, die 1837 von dem Frankfurter Forscher Hermann von Meyer anhand eines Fundes aus Mittelfranken erstmals beschrieben wurde. Hundert Jahre später erkannten 2022 die Wissenschaftler Dr. Omar Rafael Regalado Fernández und PD Dr. Ingmar Werneburg in den Sammlungen der Universität Tübingen, dass eine Hüfte aus Trossingen nicht von Plateosaurus, sondern von einer bis dahin unbekannten Gattung und Art stammte. Sie bezeichneten diese neue, schätzungsweise 2,30 Meter hohe, sechs Meter lange und zwei Tonnen schwere Spezies als Tuebingosaurus maierfritzorum.

Menschwerdung Roland Gschlössl, 2020-02-27 Heft 1/2020 ist einem sensationellen neuen Fund im Ostallgäu gewidmet: Danuvius guggenmosi lautet der wissenschaftliche Name einer Menschenaffen-Art, die vor 11,62 Millionen Jahren in Bayern lebte. Die Besonderheit: Dieser Hominide konnte bereits aufrecht gehen, weit früher als die bislang bekannten Arten. Bayern rückt mit diesem Fund ins Rampenlicht der Evolutionsforschung. Geschah die Menschwerdung nicht (nur) in Afrika, sondern (auch) in Mitteleuropa? In Heft 2/2020 betrachten wir die Trinksitten und Drogen in der Vor- und Frühgeschichte – von der Erfindung des Bieres, dem ersten Wein, seltsamen keltischen Mischgetränken bis zum Gebrauch halluzinogener Rauschmittel in vorzeitlichen Ritualen. Die weiteren Themen 2020: Leben im Meteoriten-krater – das Nördlinger Ries (Heft 3), Wege des Kupfers – Alpenpässe in der Bronzezeit (Heft 4).

Integrating Conservation Biology and Paleobiology to Manage Biodiversity and Ecosystems in a Changing World G. Lynn Wingard, Chris Schneider, Gregory P. Dietl, Damien Fordham, Policy makers and resource managers must make decisions that affect the resilience and sustainability of natural resources, including biodiversity and ecosystem services. However, these decisions are often based on evidence or theory derived from highly altered systems and over short time periods of low-magnitude environmental and climatic change. Because natural systems change and evolve across multiple timescales from instantaneous to millennial, long-term understanding of how past life has responded to perturbations can inform resource managers. By using these natural laboratories of the past, conservation paleobiology and paleoecology provide the framework necessary to anticipate and plan for future changes. The goal of this Research Topic is to heighten awareness among conservation and restoration practitioners to the value and applications of long-term perspectives provided by conservation paleobiology and paleoecology. Most conservation studies focus on systems already impacted by anthropogenic change; these studies would benefit from paleontological data through expanded temporal scales, identification of baselines, and an understanding of how organisms have responded to past changes. However, resource management decisions rarely include input from paleontologists, and paleoecological research is rarely incorporated into conservation decision-making. We seek to bridge this research-implementation gap by highlighting the application of paleoecological data to issues such as biodiversity dynamics, extinction risks, and resilience to perturbations, among other topics. We hope to foster new cross-disciplinary synergies by encouraging conservation scientists and managers to collaborate with paleontologists to improve conservation decision-making and by increasing awareness among paleontologists to the needs of the resource management community. This Research Topic will provide a forum for both the paleontological and resource management communities to exchange ideas that will enhance restoration and conservation decision-making. We invite papers on conceptual advances, reviews of specific topics to guide efforts in research or practice, case studies of successful applications, articles describing datasets with applied value, and perspective papers summarizing a body of paleontological research with relevance to the resource management community. Topics can include but are not limited to: • Responses of species, communities, and ecosystems to perturbations • Strategies to achieve the direct integration of paleobiology and paleoecology into on-ground resource management • Identifying baselines and reference conditions • Increasing the robustness of forecasting models through the incorporation of paleontological data • Identifying key species, interactions, and other phenomena as indicators of impending change • New methodologies, analytical tools, and/or proxies in the application of paleontological data to conservation and restoration practice Lynn Wingard, Damien Fordham, and Greg Dietl have no conflicts of interest. Chris

Schneider has a potential conflict of interest where manuscripts pertain to stakeholders in the petroleum industry, as she is an independent contractor in the Alberta Oil Sands mining area.
