Forest management and the impact on water resources García Chevesich, Pablo, Neary, Daniel G., Scott, David F., Benyon, Richard G., Reyna, Teresa, 2017-04-24 Trees have been around for more than 370 million years, and today there are about 80 thousand species of them, occupying 3.5 billion hectares worldwide, including 250 million ha of commercial plantations. While forests can provide tremendous environmental, social, and economic benefits to nations, they also affect the hydrologic cycle in different ways. As the demand for water grows and local precipitation patterns change due to global warming, plantation forestry has encountered an increasing number of water-related conflicts worldwide. This document provides a country-by-country summary of the current state of knowledge on the relationship between forest management and water resources. Based on available research publications, the Editor-in-Chief of this document contacted local scientists from countries where the impact of forest management on water resources is an issue, inviting them to submit a chapter.

Ancient Hunting Strategies in Southern South America Juan Bautista Belardi, Damián Leandro Bozzuto, Pablo Marcelo Fernández, Enrique Alejandro Moreno, Gustavo Adolfo Neme, 2021-01-28 This book presents the state of the art for the studies of strategies and tactics for the procurement of preys in Argentina in different regions and chronologies (from the end of the Pleistocene until historic moments). The chapters are related to the performance of these practices in hunter-gatherer, shepherd and farmer societies. From the environmental point of view, they show cases in diverse areas such as plains, mountains, forests, sea coast, steppes and puna. Likewise, the range of preys considered includes ungulates (camelids and deer), runner birds (*Rhea pennata*) and minor prey (mammals and fish). The book is aimed at professionals and students of archaeology interested in the analysis of tactics and strategies for prey capture. Every chapter offers an important contribution in theoretical, methodological and technical terms. In addition, these works possess a high comparative value on study cases of very different chronologies and environments of the Southern hemisphere. This book is a result of the 1st Workshop Strategies and tactics in order to obtain preys in the past: its discussion from the integration of different lines of evidence which was conducted in San Rafael, Mendoza, Argentina, between the 8th and 10th of August, 2018.

Recuperación y manejo de ecosistemas degradados Juan P. Puignau,1998 Los ecosistemas naturales han producido a traves de los anos una gran cantidad de recursos que el hombre ha aprovechado de diferentes maneras. La extraccion permanente y la escasa o nula reposicion ha provocado modificaciones importantes en lo estructural y en consecuencia en lo funcional de estos ambientes. En general, los multiples recursos que ofrecen los ecosistemas no han sido visualizados en conjunto asi como tampoco manejados de forma integral, por el contrario el interes por un recurso ha llevado a obbtener el maximo provecho inmediato del mismo, casi siempre sin percatarse de las posibilidades potenciales del resto del sistema. Como consecuencia de ello, las acciones suaves pero sostenidas en el tiempo han provocado una degradacion constante de esos ambientes, un ejemplo claro de ello seria el impacto provocado por la introduccion de la ganadeira.

Brazil and Climate Change Viola Eduardo, Matías Franchini, 2017-10-23 Climate change is increasingly a part of the human experience. As the problem worsens, the cooperative dilemma that the issue carries has become evident: climate change is a complex problem that systematically gets insufficient answers from the international system. This book offers an assessment of Brazil's role in the global political economy of climate change. The authors, Eduardo Viola and Matías Franchini expertly review and answer the most common and widely cited questions on whether and in which way Brazil is aggravating or mitigating the climate crisis, including: Is it the benign, cooperative, environmental power that the Brazilian government claims it is? Why was it possible to dramatically reduce deforestation in the Amazon (2005-2010) and, more recently, was there a partial reversion? The book provides an accessible—and much needed—introduction to all those studying the challenges of the international system in the Anthropocene. Through a thorough analysis of Brazil in perspective vis a vis other emerging countries, this book provides an engaging introduction and up to date assessment of the climate reality of Brazil and a framework to analyze the climate performance of major economies, both on emission trajectory and policy profile: the climate commitment approach. Brazil and Climate Change is essential reading for all students of Environmental Studies, Latin American Studies, International Relations and Comparative Politics.

The Late Cenozoic of Patagonia and Tierra del Fuego J. Rabassa, 2011-09-22 Written by highly qualified Argentine scientists and scholars, this book focuses on the uninterrupted geological and paleontological record of Patagonia and Tierra del Fuego since the Miocene-Pliocene boundary to the arrival of man and modern times. This region is an outstanding area for research, with significant interest at the international level. It provides an updated overview of the scientific work in all related fields with a strong paleoclimatic approach. Patagonia has also been a sort of a paleoclimatic bridge between the Antarctic Peninsula and the more northerly land masses, since the final opening of the Drake Passage in the middle Miocene. Timely and comprehensive, The Late Cenozoic of Patagonia and Tierra del Fuego is the only monograph book written in English.* One-stop resource for paleontological information of the Late Cenozoic of Patagonia* Covers 5 million years in the uninterrupted history of Patagonia and Tierra del Fuego* Comprehensive coverage of the region written by highly qualified Argentine scientists and scholars
