**Effective Financial Management in Public and Nonprofit Agencies** Jerome B. McKinney, 2015-02-24 This analytical volume looks at emerging fiscal trends and introduces the tools for effective financial management to American business professionals in the public, private, and nonprofit sectors. This hard-hitting book is the most comprehensive reference to financial theory and practice for operating a business—profit or nonprofit—in the United States today. Content focuses on fiscally responsible behaviors and strategies, such as the introduction of a financial auditing system to troubleshoot potential problems before they occur, the creation of internal control and risk management systems, and step-by-step procedures for ensuring maximum transparency and accountability in every part of the organization. Author and financial expert Jerome B. McKinney has expanded on the previous edition of this popular financial text, offering the latest best practices in e-government applications, cash flow analysis, revenue forecasting, and fiscal health evaluations. This fourth edition also looks at sustainability, the role of monetary policies and fiscal policy, globalization and its competitive impact, and the massive growth of outsourcing. On a final note, the work explains how recent legislation has influenced the development, use, and implementation of performance measures holding government agencies more accountable for their actions.

**Life Cycle & Technoeconomic Modeling** Antonio Colmenar Santos, David Borge Diez, Enrique Rosales Asensio, 2020-12-02 This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies. This information is intended to be used to support decision-making by groups, including researchers, industry, regulators, and policy-makers. Life cycle assessment (LCA) and technoeconomic analysis can be applied to a wide variety of technologies and energy strategies, both established and emerging. LCA is a method used to evaluate the possible environmental impacts of a product, material, process, or activity. It assesses the environmental impact throughout the life cycle of a system, from the acquisition of materials to the manufacture, use, and final disposal of a product. Technoeconomic analysis refers to cost evaluations, including production cost and life cycle cost. Often, in order to carry out technoeconomic analysis, researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a

commercial scale and estimate the costs of such expansions. The results of the developed models help identify possible market applications and provide an estimate of long-term impacts. These methods, together with other forms of decision analysis, are very useful in the development and improvement of energy objectives, since they will serve to compare different decisions, evaluating their political and economic feasibility and providing guidance on potential financial and technological risks.
