FAO-Thiaroye Processing Technique Koane Mindjimba, Illia Rosenthal, Yvette Diei-Ouadi, Kennedy Bomfeh, Aina Randrianantoandro, 2019 More than 60 percent of global production of smoked fishery products occurs in Africa and Asia, highlighting their tremendous significance in food and nutrition security, as well as livelihood support in these regions. However, prevailing processing technologies present critical challenges, especially in terms of safety and quality aspects, and thus there is an urgent need for the development of more efficient and safer systems. The FAO-Thiaroye fish processing technique (FTT) was developed to address these challenges by yielding products that comply with international limits on polycyclic aromatic hydrocarbons in particular, while fostering many social, economic and environmental benefits. This document examines the conditions in which improved fish smoking systems in general, and the FTT in particular, have been adopted in the context of benefits, trade-offs and policy implications in selected developing countries. In fact, experience from some African and Asian countries points to the need for a context-driven balance that ensures that the gains associated with the use of this new technique can be realized without making expensive compromises, especially in terms of fisheries resources status and trade dynamics. Policy and regulatory frameworks need to be informed by a risk-based approach and supportive of consistent benchmarking and differentiation of FTT products. This document reviews the lessons from those countries, and makes the case for a hard, evidence-based, policy backbone to safeguard the sustainable, eco-friendly supply of safe smoked (and dried) fishery products to support food security, particularly in the developing world. It aims to enlighten policy makers, fisheries planners and decision makers and any development practitioner interested in developing small-scale fisheries or promoting sustainable food systems, as well as private sector entrepreneurs who wish to implement this technology to improve their products. It provides recommendations on how best to mainstream consumers' interests while supporting sustainable livelihoods interventions in fisheries communities.--Page 4 of cover.

Capital Allocation: Principles, Strategies, and Processes for Creating Long-Term Shareholder Value David R. Giroux, 2021-10-26 Seize the competitive edge through intelligent, differentiated capital allocation The intelligent deployment of capital is one of the most effective ways to create long-term value. But despite this, there are very few capital allocation experts on the boards of the largest publicly traded companies, and academic research consistently finds that most firms deploy capital sub-optimally. Capital Allocation aims to educate senior leaders, board members, investors, students, and

anyone interested in business on this important topic. Until now very little has been written on capital allocation outside of academia, even though the strategic deployment of excess capital is an increasingly significant source of competitive advantage for many companies. David Giroux, Chief Investment Officer for Equities and Multi-Asset and Head of Investment Strategy at T. Rowe Price, covers the entire gamut of capital allocation issues, including optimal capital structure, capital allocation alternatives, mergers & acquisitions, and special situations. *Capital Allocation* walks you through this critical topic from beginning to end, including: Stories of companies that allocated capital in ways that created significant shareholder value Several real-life decision-making models you can use for strategically allocating your firm's capital Guidelines for generating high returns in the long term to build sustainable shareholder wealth Giroux uses academic research, personal experience, and uncomplicated mathematics to reveal approaches and actions that create long-term value. He provides case studies from Kodak, Comcast, Thermo Fisher Scientific, Danaher, General Electric, Microsoft, and others showing how capital allocation has—and hasn't—worked in real-life situations. And he shows how to use capital allocation to head off possible activist investors. *Capital Allocation* offers everything you need to know for deploying capital wisely to outperform your competitors over the long term.

Biomimetics, Biodesign and Bionics Amilton José Vieira Arruda, Felipe Luis Palombini, 2024-05-13 Nature is a vast source of inspiration and information for the resolution of complex problems and can influence many varieties of design. Biomimetics, biodesign and bionics are three branches of interdisciplinary research merging biological and applied sciences. This volume collects cases that highlight recent breakthroughs in these disciplines. Biological features such as patterns, shapes, mechanisms, colors, structures, and more can be analyzed, organized, and modeled for application in human creations. Therefore, design, engineering, and architecture projects can benefit from solutions that were already tested and verified through evolution in the natural world. With the development of new technologies for the investigation, simulation, and testing of natural features, the path from nature to product can be accelerated. The cases presented in this work showcase how technological advancements are leading to improved design solutions and influencing our very comprehension of nature and its complex organization.
