Materiales para la construcción Lyall Addleson, 1983 Esta obra procura proporcionar una ayuda sistemática basada en la relación entre los materiales para la construcción como un todo y los factores contra los cuales deben resistir. En consecuencia, cada uno de los factores se explica por separado en función de su naturaleza y propiedades y luego se relaciona a una categoría específica. También se incluyen las propiedades de todos los materiales relativos a cada factor.

Materiales de construcción AA. VV.,2007-11 Este volumen ofrece un completo retrato de los distintos materiales empleados en la construcción: piedras naturales y artificiales, hormigón, materiales cerámicos, materiales de aislamiento térmico y acústico, etc. Al principio del presente capítulo se tratarán los diferentes tipos de piedras naturales que se utilizan habitualmente en la construcción actual. Como se verá en la mayoría de los casos que se exponen, su uso se centra esencialmente en la fase de acabados de la obra. Aunque se trata de un material tradicional, es necesario conocer bien sus propiedades y en especial su comportamiento, por lo que a continuación se explicará cómo clasificar aquellas piedras naturales más utilizadas y distinguir las características físicas que las definen. Por otro lado, se hablará de aquellos materiales que se definen como piedras artificiales, que en la construcción actual constituyen una parte muy importante de los materiales utilizados, y en especial se expondrán cuáles son sus componentes básicos y sus propiedades.
