Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional and Deposition Disease Bruce R. Smoller, Franco Rongioletti, 2010-09-28 It is a pleasure to introduce this new book, Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional, and Deposition Disease, edited by two of my friends and respected colleagues, Franco Rongioletti and Bruce R. Smoller. In fact, I was very enthusiastic when I learned that they were preparing this work. Although endocrine, metabolic, w, and deposition diseases are regularly included in general textbooks of dermatology and dermatopathology, one gains the general impression that these topics receive little emphasis and are mainly included for completeness. The prospect of having all of this information in one volume, lovingly described and detailed by experts in the field, should be of great interest not only to dermatologists, pathologists, and dermatopathologists but also to internists and endocrinologists, who may well gain a different perspective on these disorders. As a dermatopathologist, I am also pleased that this project has been organized and undertaken by two distinguished authorities in cutaneous pathology. This assures a close integration of histology and other laboratory techniques with the clinical aspects of these disorders, which will make it possible – perhaps for the first time – to view these conditions in a truly comprehensive way. So I invite you, the reader, to open this volume and dig in; be prepared for an eye-catching, intellectually stimulating, and ultimately rewarding experience! Charlottesville, VA James W. Patterson v w Foreword II Dermatopathology is a bridge between Dermatology and Pathology.

Extrahepatic Manifestations in Liver Diseases R. Schmid, 1993-06-30 The liver is of central importance to the entire organism due to its diverse functions in metabolism, its ability to detoxify and excrete, the hepatic formation and inactivation of mediators, and its involvement in non-specific defence mechanisms. Thus, extrahepatic manifestations of liver disease are often decisive for the disease course. In the last few years, knowledge about interaction between the liver and other organs or systems - e.g. kidneys, GI tract, skeleton, endocrine, haematopoietic and nervous systems - has increased considerably. Thus many extrahepatic manifestations of liver disease can now be better understood and are more accessible to diagnosis and therapy. The IXth International Congress on Liver Diseases brought together experts from around the world to give information on new developments in this field which are important both for research and clinical work. These proceedings will therefore be required reading for all researchers and clinicians dealing with effects of liver diseases on the entire organism.
