The Glaucoma Book Paul N. Schacknow, John R. Samples, 2010-06-10 Putting together a comprehensive, multiauthored text is a daunting task. However, the benefits may justify the effort. Such is the case with regards to the present Glaucoma Book. It is not likely that many ophthalmologists (or others) will decide, at the end of a busy day, to pour themselves a cocktail, and settle into a comfortable chair with this large tome in hand, with the intent of reading it from start to finish. A pity. It would make several enjoyable and profitable days of good reading. The text starts with comments by an individual who is strongly grounded in the fundamentals of being a good physician. Ivan Goldberg has used his brilliance, his wide international experiences and knowledge, and his commitment to assuring that physicians know their craft, to provide a penetrating perspective on ophthalmology today and tomorrow. The Glaucoma Book ends with commentaries by the editors, John Samples, a true physician/scientist, and Paul Schacknow, an experienced community-based clinician. Samples' essay "What Really Causes Glaucoma?" nicely describes the leading theories underlying the cell biology of glaucoma. In "What Do We Know Now, What Do We Need to Know About Glaucoma?," Schacknow offers an essay on some of the controversial ideas raised within the book and speculates on future research.

Pearls of Glaucoma Management JoAnn A. Giacon, Simon K. Law, Anne L. Coleman, Joseph Caprioli, 2010-03-02 If you have ever uttered the commonly expressed lament, "Glaucoma is so confusing!" then this text is for you. You will no longer be bewildered. Why practitioners may be confused about how to be of help to patients with glaucoma - in its many incarnations and reincarnations - is easily understood. The issue seems to be overwhelming when one considers that the already massive population of those with glaucoma is increasing rapidly as the world's population increases and ages. During the past 50 years the fundamental definition of glaucoma has changed almost 180°, and the indications for treatment have become more variable and controversial, some advising early therapy and others strongly cautioning against such an approach: Various diagnostic tests have come and gone and are interpreted in such different ways that there seems to be no consensus; surgical techniques come in and out of fashion in perplexing ways. There seems to be a constantly shifting, sandy foundation on which are built unsteady schools of ever-varying advice. Why practitioners, patients, and the public are often bewildered is understandable.

Glaucoma Tarek Shaarawy, 2009 Recent dramatic advances in diagnosis, as well as medical and surgical treatment, mean that you can offer your glaucoma patients more timely and effective interventions. This brand-new clinical reference delivers the comprehensive, expert guidance you need to make optimal use of these new approaches. online, in print, and on video on DVD Get in-depth guidance on all aspects of adult and pediatric glaucoma with one volume devoted to diagnosis and medical treatment, and another that focuses on surgical techniques.

Ischemic Optic Neuropathies Sohan Singh Hayreh, 2011-08-28 Ischemic optic neuropathy, often referred to as a stroke of the optic nerve, is one of the major causes of visual impairment or loss of vision. Yet it is a highly controversial and confusing subject because of the general lack of in-depth scientific understanding of the subject. In this book the leading authority in the field describes in detail the current knowledge about the different forms of the often devastating disease. Insights into the underlying pathogenesis and peculiar clinical features are given, leading the reader to the most appropriate way of management. This information will help any physician dealing with patients who suffer from sudden loss of vision.

Glaucoma Massimo Bucci, 1996-12 The volume reports lectures and discussions presented at the International Congress

on Glaucoma, held in Rome on 2-4 February, 1996. The Congress has been designed to clarify and possibly to define the fundamental steps for managing glaucoma patients. Decision making in therapy does not mean that the conference sessions have been devoted to therapeutic problems only, even if semeiologic and diagnostic problems are pertinent when aimed at successful therapy. Actually, it is necessary to distinguish the onset of glaucoma from ocular hypertension, to decide if and how to start treatment and the methods to assess its effectiveness, to understand if the failure of medical therapy justifies surgery and, above all, if intraocular pressure is, in any case, the most important risk factor to treat. Particular relevance has been given to normal-pressure glaucoma, whose physiopathological and clinical characteristics are still highly controversial. Two round tables were devoted to the recent advances in the treatment of glaucoma, which aims at lowering intraocular pressure, directly improving the eye trophism and regenerating the areas damaged by the disease. All ophthalmologists, particularly the younger ones, have had the opportunity to capitalize on the experience and knowledge of distinguished experts from different parts of the world. This has been an invaluable and perhaps unique opportunity for all of us to express our doubts and to enhance our scientific background.
