A Century of Psychology in Australia William Matthew O'Neil,1987 This book is about people, events and some of the controversies and problems associated with the development of psychology in Australia over the last hundred years. It focuses on teaching and training in psychology, the development of psychology as a professional service, and the formation of a national psychological society. Psychology in Australia had its beginnings in the teaching of philosophy in the original universities from the 1880s. Its various applications flourished in the 1930s and during World War II, leading to an explosion of psychological services in the 1950s and an expansion of university teaching and research. In the final chapter the nature of recent Australian psychology is characterised - its major interests and emphases in teaching, research and practice.

Sexuality & Ageing Walter Pierre Bouman,Peggy J. Kleinplatz,2017-10-02 Across the globe, both in developed and developing countries, the population is rapidly ageing. In the fields of sexual and relationship therapy and sexual health,

ageing has not been an issue of priority. Too often, ageing is thought of as a process that relates to problems, deficits, and taboos, and less to pleasure, change, growth and diversity. It is treated as a separate life stage and not a process throughout the lifecycle. Sexuality and sexual health are important parts of the lives of older people, as they have a significant impact on quality of life, psychological well-being and physical health, as well as social and family life. This book brings together contributions from those currently writing on and researching ageing as it relates, in a therapeutic context, to gender identity, to sex and sexuality, and to intimate relationships. This book was originally published as a special issue of Sexual and Relationship Therapy.

Psychology and Psychiatry Jeannette Milgrom,Graham D. Burrows,2001 In the traditional medical setting, clinical psychology and psychiatry have operated independently, but clinicians now recognise that psychologists and psychiatrists working together can maximise the effectiveness of treatment and improve quality of life for individuals and families. Up to 25% of medical patients present with significant psychological problems and unless practice is integrated, these problems often remain untreated. An integrated practice and training allows clinicians to recognise and treat psychological problems, thereby reducing the economic and social costs associated with such illness. In addition, the input of psychology and psychiatry is now understood to have a role in disease progress and medical management as well as in prevention and health promotion. * Compares the disciplines of clinical psychology and psychiatry, and their practice in medical environments * Provides a how to and what to expect for clinicians who use the services of psychologists and psychiatrists * Forecasts the development and growth of this approach in medical, social and policy contexts * Offers professional development guidance to psychologists and psychiatrists working outside the medical arena
