Exogenous Factors in Colonic Carcinogenesis W. Scheppach, M. Scheurlen, 2003-01-31 This book is the proceedings of Falk Symposium 128, held in Würzburg, Germany, on May 2-3, 2002, and dedicated to the important issue of colonic carcinogenesis and its underlying genetic and environmental factors. Colorectal cancer is one of the leading causes of cancer-related death in industrialized countries. It has been recognized to be the consequence of a dynamic process leading from hyperproliferative epithelium through different classes of adenomas to invasive carcinoma. This adenoma-carcinoma sequence has been characterized on a molecular basis. Modern molecular biology has also helped to clarify the clustering of colorectal cancer within families, a phenomenon that has been known to clinicians for a long time. Thus, the pathogenesis of the two distinct familial colon cancer syndromes FAP (familial adenomatous polyposis) and HNPCC (hereditary non-polyposis colorectal cancer) is increasingly being understood. Thereby, an identification of affected people has become possible before the disease has manifested. There is also convincing evidence that the pathogenesis of sporadic colonic cancer is modulated by environmental, mainly nutritional, factors. Carcinogens seem to be far less important than the components of the 'normal' human diet. It is likely that the interplay between protective and noxious dietary compounds determines the progression of the adenoma-carcinoma sequence. Additionally, a broad spectrum of drugs has been shown to affect colonic tumorigenesis, which provides the rationale for chemoprevention strategies. These issues set the scene for discussions on how genetic and environmental factors may interact in the pathogenesis of colonic cancer, contributing fresh ideas to the prevention of this most prevalent malignancy in the industrialized world.

Fat-Soluble Vitamins Peter J. Quinn, Valerian E. Kagan, 2013-11-11 The subject for a volume on the fat-soluble vitamins needs no justification considering the importance of this group of nutrients and the rate of expansion of our knowledge of its role in cell biology, genetics, and disease. The level of our understanding has clearly moved from knowing what fat soluble vitamins do to how they perform their functions. Hand in hand with a knowledge of their molecular mechanisms of action is the recognition that vitamins are used sparingly, and regeneration processes operate in certain cases to recycle vitamins from their metabolites. We have divided the volume into alphabetical sections beginning with vitamin A and the carotenoids through vitamins D, E, F, and K, and ending with coenzyme Q. The contributors are all acknowledged experts in their particular fields and have made significant contributions to published research results. All have worked assiduously to deliver the product of their labors on a restricted time scale and to provide the most up-to-date information on their respective topics. We are truly grateful for their indulgence.

The Enzymes Fuyuhiko Tamanoi, Steven G. Clarke, 2011-09-21 Protein methylation has recently emerged as one of the most exciting areas of study on posttranslational modification. A large family of protein methyltransferases has been identified and their structural properties have been characterized. These studies have provided novel insights into how methylation regulates a variety of biological functions including DNA and RNA metabolism, protein synthesis and signal transduction. Methylation also plays important roles in aging. This volume is intended to capture these recent developments concerning protein methyltransferases.

Receptores de radio monochip para FM José María Miguel López,2005-10-30 Este libro aborda de forma estructurada tanto los aspectos de diseño como los de realización de receptores de radio para la banda de FM. Tras unos primeros capítulos dedicados al estudio de las propiedades de la modulación de frecuencia y de los circuitos básicos que configuran un receptor de radio, se desarrolla un minucioso análisis de los circuitos integrados TDA7000/10/21. Paso a paso se muestra cómo diseñar con estos circuitos receptores de FM que, al requerir muy pocos ajustes, pueden ser realizados con éxito incluso por personas con experiencia limitada en RF. El enfoque del libro tiene un marcado carácter experimental. Además del diseño de receptores, se muestra cómo realizar toda una serie de funciones auxiliares de gran interés tales como la detección del piloto de emisiones en estéreo o la decodificación de la señal RDS (Radio Data System). Para un adecuado seguimiento de los temas desarrollados se presuponen en el lector conocimientos de electrónica y teoría de circuitos a nivel de un primer ciclo en ingeniería.
