Hormones and Reproduction of Vertebrates, Volume 5 David O. Norris,Kristin H. Lopez,2024-08-08 Hormones and Reproduction of Vertebrates, Volume 5: Mammals is the fifth of five second-edition volumes representing a comprehensive and integrated overview of hormones and reproduction in fishes, amphibians, reptiles, birds, and mammals. The book includes coverage of endocrinology, neuroendocrinology, physiology, behavior, and anatomy of reptilian reproduction. It provides a broad treatment of the roles of pituitary, thyroid, adrenal, and gonadal hormones in all aspects of reproduction, as well as descriptions of major life history events. New to this edition is a concluding assessment of the effect of environmental

influences on mammals. Initial chapters in this book broadly examine sex determination, reproductive neuroendocrinology, stress, and hormonal regulation as it relates to male and female reproductive structure and function. Subsequent chapters introduce the evolution of viviparity and examine pregnancy in eutherian mammals, parturition, pheromones, and behavioral neuroendocrinology. Covered taxa include rodents, bats, and primates. The book concludes with an examination of the environmental influences on hormones and reproduction of mammals, including endocrine-disrupting chemicals and climate change. **Hormones and Reproduction of Vertebrates, Volume 5: Mammals** is designed to provide a readable, coordinated description of reproductive basics in mammals, as well as an introduction to the latest trends in reproductive research and a presentation of our understanding of reproductive events gained over the past decade. It may serve as a stand-alone reference for researchers and practitioners in the field of mammalogy or as one of five coordinated references aligned to provide topical treatment across vertebrate taxa for researchers, practitioners, and students focused on vertebrate endocrinology. - Covers endocrinology, neuroendocrinology, physiology, behavior, and anatomy of mammalian reproduction - Includes pituitary, thyroid, adrenal, and gonadal hormones - Focuses on rodents, bats, primates, ungulates, carnivores, and marine mammals - Provides new coverage on endocrine-disrupting chemicals and climate change
