*How to Make Better Decisions. Examples from Exploration* Bernhard Seubert,2021-11-26 Scientific Essay from the year 2014 in the subject Psychology - Industrial and organizational psychology, grade: A, , language: English, abstract: Good decision-making creates value for a company. The decision to drill in the right place (or not) has strong economic repercussions. Moreover, the human approach to decision-making can be flawed. Many of the common flaws in decision-making are related to heuristic factors; that is, by human ways of thinking and drawing conclusions. These factors can negatively impact the outcomes of an exploration program. This paper gives examples of cases in which geoscientific reasoning can lead to pitfalls, and explores why this is so. The paper then discusses the merits of the multiple working hypotheses (MWH) concept as an aid to harnessing seemingly contradictory data relating to several, often mutually exclusive, interpretations or scenarios. A simple method using a spreadsheet and decision-tree analysis is proposed to quantify the outcomes of multiple scenarios. The method is illustrated by a subsurface example in which two possible

interpretations, reef versus volcano, are considered. An outlook of Bayesian statistics and other methods is included.

In an abstract reasoning test question, you are given a group or a series of shapes that are defined based on one or several logical rules. Each group or series is followed by a question, which typically requires you to find the missing shape or the next shape based on the series' rules and patterns. **Abstract Reasoning MCQ for European Institution Competitions** Emmanuel Hetru, Claire Mercier, 2013 This brand new, revised and expanded edition is aimed at all candidates planning to sit European institution competitions and who wish to prepare as effectively as possible for the abstract reasoning test. Abstract reasoning questions are presented as series of diagrams containing geometric shapes which are repeated or modified according to a logical sequence. Candidates have to

identify the underlying logic and find the diagram that completes the series. Abstract reasoning tests call for skills that candidates do not normally use in everyday life: the ability to visualise geometric transformations (rotations, symmetries, etc), an aptitude to spot similarities between complex shapes, etc. We are all capable of developing these skills. It is not a question of intelligence, but of learning. Entry competitions for European institutions are highly selective. Success in the abstract reasoning test is, above all, a matter of method and training. This book can significantly increase your chances of success. It includes: - a detailed methodology illustrated with numerous examples; - 9 tests of 20 questions each, arranged by level of difficulty; - a detailed explanation of the answer to each question. The questions in this book are similar to those set in the competitions run by EPSO since 2015. They are different from those in previous editions and from our online test questions.
