Glass Fibre Reinforced Cement AJ Majumdar, V. Laws, 1991-09-02 Over the last 20 years glass reinforced cement (grc) has developed as a versatile and commercially viable material for construction. The sculptural nature of the material has encouraged innovation in the shape and texture of building facades, and it can provide high thermal efficiency, good fire resistance and more effective use of floor space. It is also a useful material for formwork, pipework, street furniture and for the refurbishment of old stone and concrete buildings. This book provides a state-of-the-art report on grc, drawing on the pioneering work undertaken by the Building Research Establishment, and describes a number of its applications for the construction industry.

Fibre Reinforced Cementitious Composites Routledge,1990-02-02 This text covers the fundamental scientific principles of fibres that have been modified to be compatible with cementitious matrices. It also provides information and a description of the properties of specific systems prepared with different types of fibres such as steel, glass, asbestos, polypropylene, natural fibres and various types of high performance polymeric fibres. It includes a reference list and sets of tables describing the engineering properties of the different systems and micrographs.

Textile Reinforced Concrete Alva Peled,Arnon Bentur,Barzin Mobasher,2017-08-07 Textile reinforced concrete (TRC) has emerged in recent years as an attractive new high performance cement-based composite. Textiles can significantly improve the mechanical behavior of cement matrices under static and dynamic conditions, and give superior tensile strength, toughness, ductility, energy absorption and protection against environmental degrading influences. Flexibility with fabric production methods enables the control of fabric and yarn geometry. This, along with the ability to incorporate into the fabric a range of yarns of different types and performances, as well as cement matrix modifications, enables design of the composite to a wide range of needs. The book is intended to provide a comprehensive treatment of TRC, covering the basic fundamentals of the composite material itself and the principles governing its performance on a macro-scale as a component in a structure. It provides in-depth treatment of the fabric, methods for production of the composite, the micro-mechanics with special attention to the role of bonding and microstructure, behavior under static and dynamic loading, sustainability, design, and the applications of TRC composites.
