El sismo de Aquila, Michoacán: 19 de septiembre de 2022 ,2025-11-02 La elevada actividad sísmica en la República Mexicana —en particular en la costa del Pacífico— provoca la pérdida de vidas humanas y daños a la infraestructura civil. Después de un evento sísmico, es necesario recorrer las zonas afectadas para identificar la magnitud del daño, para lo cual es indispensable evaluar las construcciones afectadas para determinar qué inmuebles pueden ser ocupados y continuar con sus actividades normales, a cuáles se debe restringir el acceso y realizar estudios para su posible rehabilitación, y cuáles otros deben ser demolidos. De igual manera, la visita a las zonas afectadas debe concentrarse en la identificación de las causas que provocaron los daños, clasificar los daños típicos y ofrecer recomendaciones para la comunidad ingenieril y sociedad en general, con el propósito de contribuir a mitigar en un futuro el impacto de los temblores en la región. El presente libro intenta recoger la mayor parte de estos aspectos para que sirvan de memoria de las experiencias de lo ocurrido el 19 de septiembre de 2022, en la región Sierra Costa de Michoacán y otros municipios importantes del estado. Esperamos que la información contenida en este documento tenga un beneficio para la sociedad en general y para la comunidad de ingenieros civiles. DOI : <https://doi.org/10.52501/cc.266>
