New and Emerging Entities in Dermatology and Dermatopathology Franco Rongioletti, Bruce R. Smoller, 2021-09-01 In recent years new, obscure or poorly known dermatological disorders have been described and better defined, with emphasis on clinical, histopathological and etiopathogenetic features. Familiarity with these new, emerging or revisited clinical entities is fundamental, and recognizing them with their differential diagnosis has important implications in clinical practice for better patient management. This book offers an in-depth discussion of the clinical and pathologic features of newly described or less well-known and revisited cutaneous disorders. It provides clinical findings, as well as the histologic, immunologic, and molecular features of these diseases in addition to therapeutic notes. The first section of the book covers cutaneous diseases that lack any systemic implications, such as circumscribed palmoplantar hypokeratosis, necrotizing infundibular crystalline folliculitis, and dermal hyperneury, amongst others. The second section offers coverage on cutaneous diseases with systemic implications, such as AESOP-POEMS syndrome, lipoatrophic panniculitis of children, and obesity associated with lymphedematous mucinosis. Each chapter describes an entity, along with an atlas of clinical manifestations that will serve as a “bed-side” clinical reference, followed by a series of photomicrographs depicting the histologic changes. Chapters also offer recent updates on molecular tools helpful in attaining the diagnosis as well as therapeutic recommendations based upon the more recent acquisitions. *New and Emerging Entities in Dermatology and Dermatopathology* is a must-have reference for the practicing dermatopathologist, internists, general pathologist reviewing skin biopsies, general dermatologists, family practitioners and nurse practitioners, geneticists, immunologists and other health care providers that care for patients with skin conditions.

Morphological Diagnosis of Skin Disease Robert Jackson, 1998 The reason dermatology exists as a specialty is because those trained therein can make diagnoses by direct examination of the skin. Although it may seem a simple task to diagnose a skin disease by inspection, this is not always the case - particularly today, when there is a lack of educational training in what the author terms visual literacy, the true heart of dermatology.

Backed by the expertise of more than 500 world-renowned contributors, and the reference of choice for clinicians, students, and educators,

Fitzpatrick's is enhanced by thousands of full-color photographs and a wealth of newly enhanced tables and diagrams. The Ninth Edition is bolstered by a new global editorial team; a reorganized table of contents; a more simple, readable, and direct writing style, the incorporation of more genetic, syndromic, and treatment information into each chapter; the addition of first, second, and third line treatment options; and improved table presentation.
