Managing Healthy Organizations Mikael Holmqvist, Christian Maravelias, 2010-10-04 This book studies worksite health promotion as a way of managing organizations. It examines the character of corporate health experts' work, the social contexts of their profession, their striving for influence, the way they try to affect people's thinking and behaviour, and the organizational ethic and culture that they contribute to construct.

The Knowledge Economy and Postsecondary Education National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on the Impact of the Changing Economy on the Education System, 2002-04-11 The Workshop on the Knowledge Economy and Postsecondary Education documents changes seen in the postsecondary education system. In her report Lisa Hudson focuses on who is participating in postsecondary education; Tom Bailey concentrates on community colleges as the most responsive institutions to employer needs; Carol Twigg surveys the ways that four-year institutions are attempting to modify their curricular offerings and pedagogy to adapt those that will be more useful; and Brian Pusser emphasizes the public's broader interests in higher education and challenges the acceptance of the primacy of job preparation for the individual and of market metaphors as an appropriate descriptor of American higher education. An example of a for-profit company providing necessary instruction for workers is also examined. Richard Murnane, Nancy Sharkey, and Frank Levy investigate the experience of Cisco high school and community college students need to testify to their information technology skills to earn certificates. Finally, John Bransford, Nancy Vye, and Helen Bateman address the ways learning occurs and how these can be encouraged, particularly in cyberspace.

Learner-Centered Theory and Practice in Distance Education Thomas M. Duffy, Jamie R. Kirkley, 2003-12-08 *Learner-Centered Theory and Practice in Distance Education: Cases From Higher Education* brings the voice of the learning sciences to the study and design of distance learning. The contributors examine critical issues in the design of theoretically and pedagogically based distance education programs. Eight distance education programs are described in enough detail to allow readers with different interests to understand the pedagogical approaches and the implications of implementing those approaches. Issues of theory, pedagogy, design, assessment, communities of practice, collaboration, and faculty development are discussed. Each section of the book includes: *a primary chapter written by an author or authors involved with a distance education program that reflects learner-centered principles; *a formal reaction to the chapter by a specialist from the

learning sciences, educational evaluation and policy, administration, or the corporate sector with expertise in issues of distance learning; and *an edited transcript of the authors' discussion of the primary chapter held at a symposium at the Asilomar Conference Center. A final summing up section offers two perspectives--from leading scholars outside the fields of instructional design, evaluation, and the learning sciences--on the approaches and thinking reflected in the rest of the book. This book is essential for researchers, as well as all those engaged in delivering, supporting, or administering distance education programs at the post-secondary level. The descriptions, strategies, and principles will inform the design of continuing education, as well as degree-based education and corporate education and training, and distance education programs for adults.

Combinatorial Chemistry and Molecular Diversity in Drug Discovery Eric M. Gordon,James F. Kerwin,1998-08-27

Increasing pressure to identify, optimize, develop, and commercialize novel drugs more rapidly and more cost-effectively has led to an urgent demand for technologies that can reduce the time to market for new products. Molecular diversity, of both natural and synthetic materials, provides a valuable source of compounds for identifying and optimizing new drug leads. Through the rapidly evolving technology of combinatorial chemistry, it is now possible to produce libraries of small molecules to screen for novel bioactivities. This powerful new technology has begun to help pharmaceutical companies find new drug candidates quickly, save significant dollars in preclinical development costs, and ultimately change their fundamental approach to drug discovery. Included among the many topics: Historical background. Library strategy and design. Solid-phase synthesis. Small molecular libraries. Automation, analytical, and computational methodology. Biological diversity. Strategies for screening combinatorial libraries. Combinatorial drug screening and development. Combinatorial chemistry information management.

International Trade in Agricultural Products Michael R. Reed,2001 This book explores the broad issues and essential topics involved in international agricultural trade: agricultural policy, foreign direct investment, technical barriers, macroeconomics, the environment, preferential trade agreements. It presents this fundamental material as part of a

complete treatment that offers students an understanding of how the current trade regime works, and which parties benefit and lose as the regime changes. Chapter topics include gains from trade, policies of importing and exporting companies, multilateral trade negotiations, European agriculture, and international marketing. For individuals with a background in intermediate microeconomics, ready for an extensive graphical analysis of trade issues.
