*Acute Heart Failure* Wolfgang Krüger,Andrew Ludman,2009-05-31 Acute heart failure is a potentially life threatening situation where correct, rapid therapy can have a life saving impact. In this rapidly changing area of medicine this text aims

to bring the latest understanding of the pathophysiology together with a practical guide to diagnosis and management using a thoroughly evidence based approach. This will appeal to a wide audience of health care professionals who will treat patients with acute heart failure, including doctors, medical students, nurses, and other professionals in the Emergency Department, General Internal Medicine, Anaesthetics, Cardiology (Medicine and Surgery) and Critical Care settings. It may be used as an evidence based guide for the junior practitioner or as an aide-memoire for the more senior. Always keeping the underlying pathophysiology at the forefront of the discussion, the reader is encouraged to understand the aetiology of the acute situation and how to direct management in order to correct the abnormal physiology. Each chapter is heavily referenced allowing the reader to easily refer to the original experimental studies and pursue topics in more detail if required. This text is a valuable addition to any practitioner who treats patients with acute heart failure and wants a deeper understanding of the condition.

Muir, 1988 This second edition has been updated, reflecting new knowledge in the field and including several new topics: a discussion of endorphins and neuroregulators, a section on oncogenes and another on toxic-shock syndrome, and a discussion of AIDS. As with the first edition, a conceptual adaptation approach is used throughout,

and the emphasis is on mechanisms by which pathogenic agents disrupt homeostasis and mechanisms by which the body maintains or restores homeostasis. Sufficient facts and details are provided to enable students to understand the mechanisms and principles involved, rather than merely providing a list of signs and symptoms. Also new to this edition are 'behavioral objectives' at the start of each chapter and review questions at the end of each unit that integrate information from several chapters.
