Insights in Consciousness Research, volume II Xerxes D. Arsiwalla, Antonino Raffone, Luca Simione, Monia D'Angiò, 2025-05-27 This Research Topic is the second volume of the Research Topic Insights in Consciousness Research 2021. Please see the first volume [here](#). We are now entering the third decade of the 21st Century, and, especially in the last years, the achievements made by scientists have been exceptional, leading to major advancements in the fast-growing field of Psychology. Frontiers has organized a series of Research Topics to highlight the latest advancements in science in order to be at the forefront of science in different fields of research. This editorial initiative of particular relevance, led by Antonino Raffone, Specialty Chief Editor of the section Consciousness Research, as well as Luca Simione and Xerxes D. Arsiwalla is focused on new insights, novel developments, current challenges, latest discoveries, and recent advances of internationally recognized researchers at various stages of their careers. High-quality original research manuscripts on novel concepts, problems, and approaches are welcomed. This Research Topic solicits brief, forward-looking contributions from the editorial board members that describe the state of the art, outlining, recent developments and major accomplishments that have been achieved and that need to occur to move the field forward. Authors are encouraged to identify the greatest challenges in the sub-disciplines, and how to address those challenges. The goal of this special edition Research Topic is to shed light on the progress made in the past decade in the Consciousness Research field and on its future challenges to provide a thorough overview of the state of the art in this area of research. This article collection will inspire, inform, and provide direction and guidance to researchers in the field. Please note that submissions to this collection are by invitation only. Please inform the Editorial Office when you wish to submit a manuscript.

Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature, “selective attention” and “consciousness” lack clear, undisputed definitions. Partly because of this deficit there exists a lively debate on the relationship between the two. Nevertheless, attention has been studied scientifically for a long time, because a variety of tasks allow researchers to control several of its aspects (e.g. focused and feature-based attention). Consciousness as a scientific subject of study has emerged more recently, but is now rapidly gaining traction. Scientific studies of consciousness concern the state or level of consciousness (e.g., awake as opposed to in coma, dreamless sleep or under anaesthesia) as well as the contents of consciousness or the

phenomenology of perception. With the increase in consciousness-focused research, there is a concomitant surge in research examining the relationship between attention and consciousness. This relationship between attention and consciousness is the topic of this Research Topic. Contributions related to or focused solely on attention or on consciousness will not be considered. It had long been assumed that attention and consciousness are inextricably intertwined: two sides of the same coin. However, recently substantial evidence has emerged that attention and consciousness are interacting, but separable processes. It is however debated how tight the interactions are, and what the exact nature of the relationship is. Therefore, we invite researchers from different “camps” to provide opinionated but balanced literature reviews. Different groups will interpret the same data in different ways. We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields. Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views. Even though attention and consciousness are critical aspects of many different cognitive processes, they are mainly studied (though not exclusively) in the domain of visual perception. In other sensory modalities, e.g. olfaction or audition, it is currently not clear whether distinctions between attention and consciousness exist, which is even more true for other cognitive processes such as memory. Therefore, we specifically invite contributions covering the auditory, somatosensory, olfactory, and memory domain. We ask all contributors to provide discussions on the relationship between attention and consciousness, and focus on (1) the influence of attention on sensory processing; (2) the formation of conscious perception, (3) the evidence for unconscious processing and its modulation by attention; (4) potential indications for dissociations between attention and consciousness (e.g. does paying attention to a stimulus decrease performance on e.g. a discrimination task?); (5) neuroimaging and neurophysiology data pertaining to these questions. Often, one is caught in one’s own research field and lacks the time or the knowledge to delve into another field. This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness, and their interactions, in several different sensory modalities.

Through Which Reality Shines Sangharakshita,2025-08-26 Through Which Reality Shines is Sangharakshita’s incisive commentary on D.T. Suzuki’s Outlines of Mahayana Buddhism. Using Suzuki’s work as a springboard, he explores key

Mahayana themes—karma, anatman, sunyata, the Bodhisattva path—with clarity and originality, revealing his distinctive vision of the Buddhist tradition.

The Neurology of Consciousness Steven Laureys,Olivia Gosseries,Giulio Tononi,2015-08-12 The second edition of The Neurology of Consciousness is a comprehensive update of this ground-breaking work on human consciousness, the first book in this area to summarize the neuroanatomical and functional underpinnings of consciousness by emphasizing a lesional approach offered by the study of neurological patients. Since the publication of the first edition in 2009, new methodologies have made consciousness much more accessible scientifically, and, in particular, the study of disorders, disruptions, and disturbances of consciousness has added tremendously to our understanding of the biological basis of human consciousness. The publication of a new edition is both critical and timely for continued understanding of the field of consciousness. In this critical and timely update, revised and new contributions by internationally renowned researchers—edited by the leaders in the field of consciousness research—provide a unique and comprehensive focus on human consciousness. The new edition of The Neurobiology of Consciousness will continue to be an indispensable resource for researchers and students working on the cognitive neuroscience of consciousness and related disorders, as well as for neuroscientists, psychologists, psychiatrists, and neurologists contemplating consciousness as one of the philosophical, ethical, sociological, political, and religious questions of our time. - New chapters on the neuroanatomical basis of consciousness and short-term memory, and expanded coverage of comas and neuroethics, including the ethics of brain death - The first comprehensive, authoritative collection to describe disorders of consciousness and how they are used to study and understand the neural correlates of conscious perception in humans. - Includes both revised and new chapters from the top international researchers in the field, including Christof Koch, Marcus Raichle, Nicholas Schiff, Joseph Fins, and Michael Gazzaniga

Consciousness David Rose, 2006-02-02 Consciousness is a state of being aware, of our self, of our surroundings, of our place in those surroundings. What neural processes drive our awareness, and how do these processes relate to what we think of as our mind? David Rose seeks to respond to these questions, taking a critical approach.
