DAX1 and Its Network Partners Robert Charles Clipsham,2003

The Molecular Basis of Dax1 Gene Regulation and Function Richard Nithipaisals Yu,1998 Mutations in the DAX1 gene are associated with X-linked, adrenal hypoplasia congenita and hypogonadotropic hypogonadism. Males are affected with adrenal insufficiency usually within a few weeks after birth and require supplementation of adrenal steroids for survival. Later, these males also exhibit pubertal failure and infertility. In addition, duplication of the DSS critical region, which encompasses the DAX1 gene at Xp21, results in dosage-sensitive, male-to-female sex reversal, which implicates DAX1 as a potential ovarian determining gene. This dissertation examines the transcriptional regulation of the Dax1 gene and assesses

the in vivo role of Dax-1 in adrenal function and in the reproductive endocrine axis.
