Rhetorical Aspects of Discourses in Present-Day Society Lotte Dam, Lise-Lotte Holmgreen, Jeanne Strunck, 2009-05-27 Since antiquity, the notion of rhetoric has been associated with Aristotle, Cicero and Quintilian. Their theories are central to the understanding that, on the one hand, rhetoric can be used for persuading and convincing an audience, and on the other, for becoming an eloquent speaker. Based on this understanding, the study of rhetoric was for many years regarded by scholars as a meaningless enterprise as it was perceived as a study of linguistic ornamentation. However, in the beginning of the twentieth century, scholars regained an interest in the study of rhetoric in recognition of rhetorical skills being important for communication in modern society. Like speakers in public life, e.g. politicians, who had always acknowledged the role of rhetoric, all sorts of communicators, mediators and scholars became interested in rhetoric as a practical tool for building up texts meant for the public sphere as well as an analytical tool for the critique of public argumentation. This led to the development of new theories from New Rhetoric over Rhetorical Criticism to theories of genre and discourse, reflecting the view that rhetoric must be understood and used against the social and cultural framework in which it is embedded. The contributions of this book reflect this multi-faceted approach to rhetoric, discourse and genre through their focus upon and analysis of different institutionalised discourses. Thus, within the three sections of political, journalistic and organisational discourse, the articles discuss various discourse types and their rhetorical features, contributing to the understanding of rhetoric and discourse having significant influence on human action and interaction in society.

Fanon, Žižek, and the Violence of Resistance Zahi Zalloua, 2025-06-26 In a novel pairing of anti-colonial theorist Frantz Fanon with Marxist-Lacanian philosopher Slavoj Žižek, Zahi Zalloua explores the ways both thinkers expose the violence of political structures. This inventive exploration advances an anti-racist critique, describing how ontology operates in a racial matrix to produce some human bodies that count and others (deemed not-quite- or non-human) that do not. For Fanon and Žižek, the violence of ontology must be met with another form of violence, a revolutionary violence that delegitimizes the logic of the symbolic order and troubles its collective fantasies. Whereas Fanon begins his challenge to ontology by exposing its historical linkages to Europe's destructive imperialist procedures before proceeding to "stretch" Marxism, along with psychoanalysis, to account for the crushing (neo)colonial situation, Žižek premises his work on the refusal to accept the totality of ontology. Because of these different points of intervention, Fanon and Žižek together offer a powerful and multifaceted assessment of the liberal anti-racist paradigm whose propensity for identity politics and aversion to class struggle silence the cry of the dispossessed and foreclose radical change. Avoiding contemporary separatist temptations (decoloniality and Afropessimism), and breaking with a non-violent, sentimentalist futurology that announces more of the same, Fanon and Žižek point in a different direction, one that eschews identitarian thought in favor of a collective struggle for freedom and equality.

Complexity Applications in Language and Communication Sciences Àngels Massip-Bonet, Gemma Bel-Enguix, Albert Bastardas-Boada, 2019-01-11 This book offers insights on the study of natural language as a complex adaptive system. It discusses a new way to tackle the problem of language modeling, and provides clues on how the close relation between natural language and some biological structures can be very fruitful for science. The book examines the theoretical framework and then applies its main principles to various areas of linguistics. It discusses applications in language contact, language change, diachronic linguistics, and the potential enhancement of classical approaches to historical linguistics by means of new methodologies used in physics, biology, and agent systems theory. It shows how studying language evolution and change using computational simulations enables to integrate social structures in the evolution of language, and how this can give rise to a new way to approach sociolinguistics. Finally, it explores applications for discourse analysis, semantics and

cognition.

Narrative Art and Poetry in the Books of Samuel Jan Fokkelman, 2018-07-17 Narrative Art and Poetry in the Books of Samuel is the vast undertaking to interpret all the material in Samuel. Everything that the text has to offer can only be understood and appreciated to the full, and its interpretation can only lay claim to full validity by means of an integral view. Therefore the author has developed a textual model which regards and covers the composition of the Samuel books as a hierarchy of twelve levels. The Hebrew text is the long section which inextricably interweaves the demise of king Saul and the rise of David into a subtle and complicated dialectic of election and rejection. The author's model of the 'semiotic scale' enables him to chart the different levels of the textual hierarchy and exactly determine the weight and range of action of each formal fact within the whole.
