The Brain Explained Daniel Drubach, 2000 A fascinating read for non-medical layman and allied health field professionals, this unique book on neuroscience goes beyond discussions on the morphology and physiology of the brain by presenting the central nervous system as what it is: not only a group of neurons and lobes, but an extremely complex, integrated system responsible for an extraordinarily wide scope of functions. Holistic in approach, it integrates data from the realms of basic sciences, psychology, psychiatry, and neurology - covering a significant amount of updated subject matter plus material rarely found in standard neuroanatomy and neurophysiology texts - such as drug abuse, nutrition, brain plasticity, dreaming, consciousness, and aggression. Presents a witty, conversational and captivating narrative, interjecting discussions of complex concepts with humor, anecdotes, philosophical discussions and clinical case studies. For professionals in such allied health fields as nursing, social work, psychology, and the rehabilitation disciplines, including physical, occupational, recreational and speech and language therapies.

Human Communication Disorders George H. Shames, 2002 Treating human communication sciences as a truly interdisciplinary field, Anderson (Florida International U.) and Shames (U. of Pittsburgh) incorporate new chapters on literacy development, genetics, neurogenic speech disorders, dysphagia, and aural rehabilitation in this updated introductory

text. Other chapters address basic concepts, and cultural and clinical issues related to language/speech development and disorders. Authors' personal motivations for choosing to work in this field should be of particular interest to students. The text also includes case studies, study questions, suggested readings, and a glossary. Previous editions appeared between 1982 and 2002.
